LICENSED OPERATING REACTORS

READEX FICHE

AUTHORIZATION AND CLEARANCE

THE U.S. NUCLEAR REGULATORY COMMISSION'S OFFICE OF MANAGEMENT AND PROGRAM ANALYSIS PUBLISHES THIS MONTHLY STATUS REPORT "AS PART OF THE REPORTING REQUIREMENTS IN SECTION 50.36 OF 10 CFR PART 50 UNDER GAO CLEARANCE NUMBER B-180225, WITH AN EXPIRATION DATE OF SEPTEMBER 30, 1981," AS STATED IN THE OCTOBER 3, 1978 LETTER FROM JOHN M. LOVELADY, ASSISTANT DIRECTOR, GENERAL GOVERNMENT DIVISION, U. S. GENERAL ACCOUNTING OFFICE, TO J.M. FELTON, DIRECTOR, DIVISION OF RULES AND RECORDS, U.S. NUCLEAR REGULATORY COMMISSION.

STATEMENT OF PURPOSE

The U. S. Nuclear Regulatory Commission's monthly OPERATING UNITS STATUS REPORT – LICENSED OPERATING REACTORS, provides data on the operation of nuclear units as timely and accurately as possible. This information is collected by the Office of Management and Program Analysis from the Headquarters Staff of NRC's Office of Inspection and Enforcement, from NRC's Regional Offices, and from utilities. Since all of the data concerning operation of the units is provided by the utility operators less than two weeks after the end of the month, necessary corrections to published information are shown on the ERRATA page.

This report is divided into three sections: the first contains monthly highlights and statistics for commercial operating units, and errata from previously reported data; the second is a compilation of detailed information on each unit, provided by NRC Regional Offices and IE Headquarters; and the third section is an appendix containing nuclear availability and capacity factors, forced outage rate statistics, spent fuel storage capability, reactor-years of experience and non-power reactors in the United States.

Throughout the report, statistical factors for periods greater than a report month, or for more than one unit, are computed as the arithmetic average of each unit's individual operating statistics. The statistical factors for each unit for the report month are computed from actual power production for the month. The factors for the life-span of each unit (the "Cumulative" column) are reported by the utility and are not entirely re-computed by NRC. Utility power production data is checked for consistency with previously submitted statistics.

It is hoped this status report proves informative and helpful to all agencies and individuals interested in analyzing trends in the nuclear industry which might have safety implications, or in maintaining an awareness of the U. S. energy situation as a whole.

- Facility Data
- Inspection and Enforcement Status
- Reports Received from Licensee
- Operating Status
- Average Daily Power Level (MWe)
- Unit Shutdowns/Reductions

SECTION 3 – APPENDIX

NUCLEAR POWER GENERATION (Availability & Capacity Factors), 1974 to PRESENT 3-2
NUCLEAR POWER GENERATION (Availability Factor, Capacity Factor & Forced Outage Rate), 1975 to PRESENT 3-3
STATUS OF SPENT FUEL STORAGE CAPABILITY 3-4
REACTOR-YEARS OF EXPERIENCE 3-5
NON-POWER REACTORS IN THE U.S. 3-6

GLOSSARY

AVERAGE DAILY POWER LEVEL (MWe)	The net electrical energy generated during the day (measured from 0001 to 2400 hours inclusive) in megawatts hours divided by 24 hours.
LICENSED THERMAL POWER (MWt)	The maximum thermal power of the reactor authorized by the NRC, expressed in megawatts.
DATE OF COMMERCIAL OPERATION	Date unit was declared by utility owner to be available for the regular production of electricity; usually related to satisfactory completion of qualification tests as specified in the purchase contract and to accounting policies and practices of utility.
DESIGN ELECTRICAL RATING (DER) (Net MWe)	The nominal net electrical output of the unit specified by the utility and used for the purpose of plant design.
FORCED OUTAGE	An outage required to be initiated no later than the weekend following discovery of an off-normal condition.
FORCED OUTAGE HOURS	The clock hours during the report period that a unit is unavailable due to forced outages.
GROSS ELECTRICAL ENERGY GENERATED (MWH)	Electrical output of the unit during the report period as measured at the output terminals of the turbine generator, in megawatts hours.
GROSS HOURS	The clock hours from the beginning of a specified situation until its end. For outage durations, the clock hours during which the unit is not in power production.
GROSS THERMAL ENERGY GENERATED (MWH)	The thermal energy produced by the unit during the report period as measured or computed by the licensee in megawatt hours.
HOURS GENERATOR ON-LINE	Also, "Unit Service Hours." The total clock hours in the report period during which the unit operated with breakers closed to the station bus. These hours added to the total outage hours experienced by the unit during the report period, shall equal the hours in the report period.
HOURS IN REPORTING PERIOD	For units in power ascension at the end of the period, the gross hours from the beginning of the period or the first electrical production, whichever comes last, to the end of the period. For units in commercial operation at the end of the period, the gross hours from the beginning of the period or of commercial operation, whichever comes last, to the end of the period or decommissioning, whichever comes first.
HOURS REACTOR CRITICAL	The total clock hours in the report period during which the reactor sustained a controlled chain reaction.
MAXIMUM DEPENDABLE CAPACITY (GROSS) (MDC Gross) (Gross MWe)	Dependable main-unit gross capacity, winter or summer, whichever is smaller. The dependable capacity varies because the unit efficiency varies during the year due to cooling water temperature variations. It is the gross electrical output as measured at the output terminals of the turbine generator during the most restrictive seasonal conditions (usually summer).
MAXIMUM DEPENDABLE CAPACITY (NET) (MDC Net) (Net MWe)	Maximum Dependable Capacity (Gross) less the normal station service loads.
NAMEPLATE RATING (Gross MWe)	The nameplate power designation of the generator in megavolt amperes (MVA) times the nameplate power factor of the generator. NOTE: The nameplate rating of the generator may not be indicative of the maximum or dependable capacity, since some other item of equipment of a lesser rating (e.g., turbine) may limit unit output.
NET ELECTRICAL ENERGY GENERATED	Gross electrical output of the unit measured at the output terminals of the turbine generator during the reporting period, minus the normal station service electrical energy utilization. If this quantity is less than zero, a negative number should be recorded.
OUTAGE	A situation in which no electrical production takes place.
OUTAGE DATE	As reported on Appendix D of Reg. Guide 1.16, the date of the start of the outage. If continued from a previous month, report the same outage date but change "Method of Shutting Down Reactor" to "4 (Other)" and add a note: "Continued from previous month."
OUTAGE DURATION	The total clock hours of the outage measured from the beginning of the report period or the outage, whichever comes last, to the end of the report period or the outage, whichever comes first.
OUTAGE NUMBER	A number unique to the outage assigned by the licensee. The same number is reported each month in which the outage is in progress. One format is "76-05" for the fifth outage to occur in 1976.
PERIOD HOURS	See "Hours in Reporting Period."
POWER REDUCTION	A reduction in the Average Daily Power Level of more than 20% from the previous day. All power reductions are defined as outage of zero hours durations for the purpose of computing unit service and availability factors, and forced outage rate.
REACTOR AVAILAPLE HOURS	The total clock hours in the report period during which the reactor was critical or was capable of being made critical. (Reactor Reserve Shutdown Hours + Hours Reactor Critical.)
REACTOR AVAILABILITY FACTOR	$\frac{\text{Reactor Available Hours} \times 100}{\text{Period Hours}}$
REACTOR RESERVE SHUTDOWN	The cessation of criticality in the reactor for administrative or other similar reasons when operation could have been continued.
REACTOR RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the reactor is in reserve shutdown mode. NOTE: No credit is given for NRC imposed shutdowns.
REACTOR SERVICE FACTOR	$\frac{\text{Hours Reactor Critical} \times 100}{\text{Period Hours}}$
REPORT PERIOD	Usually, the preceding calender month. Can also be the preceding calendar year, (Year-to-Date), or the life-span of a unit (cumulative).
RESTRICTED POWER LEVEL	Maximum net electrical generation to which the unit is restricted during the report period due to the state of equipment, external conditions, administrative reasons, or a direction by NRC.
SCHEDULED OUTAGE	Planned removal of a unit from service for refueling, inspection, training, or maintenance. Those outages which do not fit the definition of "Forced Outage" perforce are "Scheduled Outages."
STARTUP AND POWER ASCENSION TEST PHASE	Period following initial criticality during which the unit is tested at successively higher levels, culminating with operation at full power for a sustained period and completion of warranty runs. Following this phase, the utility generally considers the unit to be available for commercial operation.
UNIT	The set of equipment uniquely associated with the reactor, including turbine generators, and ancillary equipment, considered as a single electrical energy production facility.
UNIT AVAILABLE HOURS	The total clock hours in the report period during which the unit operated on-line or was capable of such operation. (Unit Reserve Shutdown Hours + Hours Generator On-Line.)
UNIT AVAILABILITY FACTOR*	$\frac{\text{Unit Available Hours} \times 100}{\text{Period Hours}}$
UNIT CAPACITY FACTORS	
– Using Licensed Thermal Power	$\frac{\text{Gross Thermal Energy Generated} \times 100}{\text{Period Hours} \times \text{Lic. Thermal Power}}$
– Using Nameplate Rating	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{Nameplate Rating}}$
– Using DER	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{DER}}$
– Using MDC Gross	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Gross}}$
– Using MDC Net	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Net}}$

NOTE: if MDC Gross and/or MDC Net have not been determined, the DER is substituted for this quantity for Unit Capacity Factor calculations.

UNIT FORCED OUTAGE RATE	$\frac{\text{Forced Outage Hours}}{\text{Unit Service Hours} + \text{Forced Outage Hours}}$
UNIT RESERVE SHUTDOWN	The removal of the unit from on-line operation for economic or other similar reasons when operation could have been continued.
UNIT RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the unit was in reserve shutdown mode.
UNIT SERVICE FACTOR	$\frac{\text{Unit Service Hours} \times 100}{\text{Period Hours}}$
UNIT SERVICE HOURS	See "Hours Generator On-Line."

SECTION 1 – CURRENT DATA SUMMARIES

MONTHLY HIGHLIGHTS OF COMMERCIAL NUCLEAR POWER UNITS

FOR MONTH OF

DECEMBER 1979

LICENSED POWER REACTORS:

NUMBER		CAPACITY[1] MWe (Net)
66	IN COMMERCIAL OPERATION	48,151
1	NOT IN COMMERCIAL OPERATION	912
67[2]	LICENSED TO OPERATE	49,063

POWER GENERATION

	REPORT MONTH	PREVIOUS MONTH	YEAR-TO-DATE
1. GROSS ELECTRICAL (MWHE)	21,468,763	20,011,593	264,375,005
2. NET ELECTRICAL (MWHE)	20,474,669	19,038,225	251,941,721
3. AVG. UNIT SERVICE FACTOR (%)	66.4	65.7	66.5
4. AVERAGE UNIT AVAILABILITY FACTOR (%)	66.6	66.1	67.9
5. AVERAGE UNIT CAPACITY FACTOR (MDC) (%)	60.7	58.3	60.5
6. AVG. UNIT CAPACITY FACTOR (DER) (%)	59.2	56.7	58.9
7. FORCED OUTAGE RATE (%)	13.0	15.1	14.3

NOTES

[1] BASED UPON MAXIMUM DEPENDABLE CAPACITY; DESIGN ELECTRIC RATING USED IF MDC NOT DETERMINED.

[2] EXCLUDES INDIAN POINT 1 (DER = 265), HUMBOLDT BAY (DER = 65), AND THREE MILE ISLAND 2 (DER = 906) WHICH HAVE OPERATING LICENSES BUT ARE SHUTDOWN INDEFINITELY.

ACTUAL VS. POTENTIAL ENERGY PRODUCTION

			% OF POTENTIAL PRODUCTION
POTENTIAL ENERGY PRODUCTION IN THIS PERIOD BY UNITS IN COMMERCIAL OPERATION (Using Maximum Dependable Capacity Net)		35,824,344 MWHe	
ENERGY ACTUALLY PRODUCED DURING THIS REPORT PERIOD	=	21,468,763 MWHe (GROSS) (20,474,669) (NET)	59.9 (57.2)
ENERGY NOT PRODUCED DURING THIS REPORT PERIOD DUE TO SCHEDULED OUTAGES (NET)	=	5,721,935 MWHe (7,791,268)	16.0 (21.7)
ENERGY NOT PRODUCED DURING THIS REPORT PERIOD DUE TO FORCED OUTAGES (NET)	=	3,758,547 MWHe (5,483,469)	10.5 (15.3)
ENERGY NOT PRODUCED DURING THIS REPORT PERIOD FOR OTHER REASONS (NET)	=	4,875,099 MWHe (2,074,938)	13.6 (5.8)
TOTAL		35,824,344 MWHe =	100%
ENERGY NOT PRODUCED THIS REPORT PERIOD DUE TO NRC RESTRICTIONS	=	3,970,964 MWHe	11.1
NUMBER OF UNITS WITH POWER RESTRICTIONS IMPOSED BY NRC	=	1	

NOTE: The numbers shown in parentheses ( ) represent a different method of computing nuclear energy distribution for the month. Both sets of statistics will be published for the remainder of the year so a comparison between methods of calculations can be made. Starting with the month of January 1980, the new method of calculation will be used exclusively.

The changes in method of calculation are:

Energy actually produced during this report period - this parameter used to list the gross electrical production for the month. The new calculation uses the net electrical energy.

Energy not produced during this report period due to scheduled and forced outages - the existing method for allocating numerical values to these parameters was the summation of the product of the unit MDC net times the length of the outage times the capacity factor of the unit for the month. A capacity factor of 0.75 was substituted for units that did not operate during the month. The new method of calculation will be the summation of the products of the unit MDC net times the length of the outage.

The remaining computations will remain the same, however, the amount of energy allocation will change because of differences in the previous computations. For instance; energy not produced during this report for other reasons will still be the residual after the other three energy parameters (energy produced, forced & scheduled outages) are subtracted from the potential power production.

Energy not produced this report period due to NRC restrictions has been and will continue to be the summation of the products of unit MDC times the length of the regulatory outage plus the summation of the reduction in power caused by the regulatory restriction times the length of the NRC restriction, if applicable.

OUTAGE DATA

	NUMBER	HOURS	PERCENT OF CLOCK TIME	MWHE LOST PRODUCTION
1. FORCED OUTAGES DURING MONTH	42	6,381.6	13.0	3,758,547
2. SCHEDULED OUTAGES DURING THE MONTH	32	10,097.4	20.6	5,721,935
3. TOTAL	74	16,479.0	33.6	9,480,482

Down time x licensed power (MWe) x capacity factor for report month

Capacity factor of 0.75 was assumed for units that did not operate at all during the period.

NOTE: ENTRIES IN THE "MWHE LOST PRODUCTION" COLUMN WILL CONTINUE TO BE PUBLISHED USING THE TRADITIONAL METHOD OF CALCULATION. STARTING WITH JANUARY 1980 DATA, THE REVISED METHOD OF CALCULATING THESE PARAMETERS, AS SHOWN IN PARENTHESES AND DESCRIBED IN THE "ACTUAL VS. POTENTIAL ENERGY PRODUCTION" SECTION WILL BE PUBLISHED EXCLUSIVELY.

8 UNITS	60.6

All PWR's	CFMDC
40 UNITS	54.3

2. COMPUTED BY RATIO OF VENDOR TOTALS

	GE BWR's	W PWR's	CE PWR's	B&W PWR's	All PWR's
NET ELECTRICAL PRODUCTION	9,447,001	5,307,632	2,604,772	3,042,835	10,955,239
MDC NET	17,327	18,435	5,178	6,768	30,381
CFMDC	73.3	38.7	67.6	60.4	48.5

Capacity factor in this page, denoted as CFMDC, is a function of the net maximum dependable capacity. See the corresponding definition in the Glossary. The vendor averages are either computed as (1) the arithmetic average of the stated CFMDC for that vendor or (2) by the formula:

$$\frac{\text{Net Electrical Energy Produced by Vendor}}{\text{Potential Electrical Production By Vendor In This Month.}} \times 100\%$$

Units Excluded	Reason for Exclusion
Indian Point 1	Unit Shutdown Indefinitely
Humboldt Bay	
Three Mile Island 2	
Arkansas 2	Not in Commercial Operation
Big Rock Point	Not Representative of Typical BWRs
LaCrosse	Not Representative of Typical BWRs and Atypical Vendor
Fort St. Vrain	Atypical Vendor and Reactor Design

AVERAGE DAILY POWER LEVEL FOR ALL COMMERCIALLY OPERATING UNITS

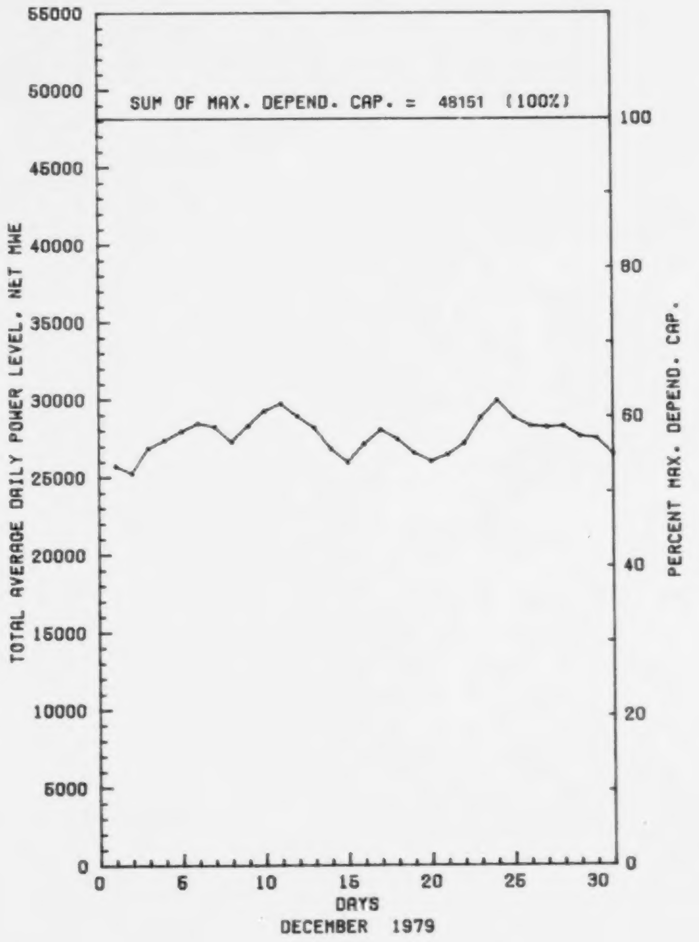
This chart depicts the average daily power level for the units in commercial operation during the month.

The straight line on the graph labelled "SUM OF MAX DEP CAP'S" is plotted at the value shown by summing the separate maximum dependable capacities of the commercially operating units (in Net MWe). The plot shown below the line is calculated by summing the separate average daily power levels of the commercially operating units for each day of the month.

The scale on the left vertical axis runs in 1,000 MWe increments from 0 to 55,000 MWe (Net). The right vertical axis shows the percentage in 10% increments, up to 100% of the "SUM OF MAX DEP CAP'S."

It should be recognized that the 100% line would be obtainable only if all of the commercially operating units operated at 100% capacity, 24 hours per day, for the entire month. In other words, since any power generator must occasionally shut down to refuel and/or perform needed maintenance, and also since 100% capacity production is not always required by power demands, the 100% line is a theoretical goal and not a practical one.

SUMMARY PLOT FOR COMMERCIALLY OPERATING UNITS



ERRATA

Corrections and Amendments to Previously-Reported Data

(NOTE: These changes are reflected in the data contained in the current report)

CORRECTIONS TO NUREG 0020, VOL. 3 NO. 12 DECEMBER 1979

Page	Unit Name	Item	Correction
	NONE		

MULTIPLE - ISSUE CORRECTIONS

MAINE YANKEE	Item 16. Gross Thermal Energy (MWH) in the cumulative column has been decreased by 25 MWH because of a long-term licensee audit.
RANCHO SECO	Item 16. Gross Thermal Energy (MWH); a revision in the burnup coefficient has resulted in a decrease of 524,381 in the year-to-date column and 528.113 in the cumulative column.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERIA V, SECTION 5 OF THE QUALITY ASSURANCE TOPICAL REPORT (APL-TOP-1A, REV. 4), AND A LICENSEE PROCEDURE 1004.23 ON DRAWING DOCUMENT CONTROL, A SAFETY RELATED AS-BUILT DRAWING M-231, WAS NOT REVISED AND ISSUED FOLLOWING IMPLEMENTATION OF DESIGN CHANGE REQUEST 79-1001, SMALL BREAK ECCS REDESIGN.
(7916 INFRACTION)

CONTRARY TO TS 3.1.1.3.A, THE REACTOR WAS OPERATED AFTER THE PRESSURIZER CODE SAFETY VALVE PSV-1002 WAS TESTED ON MARCH 24, 1978 AND LEFT WITH A SET POINT IN EXCESS OF THE ALLOWABLE SET POINT IN THE ACCEPTANCE CRITERIA OF THE TEST PROCEDURE AND AS STATED IN THE BASES OF TS 3.1.
(7916 INFRACTION)

CONTRARY TO TS 6.4.1 AND SECTION 5.5 OF ANSI N18.1, (1) THE LICENSEE HAD NOT FULLY IMPLEMENTED THE AND TRAINING PLAN (PROGRAM), (2) THE TRAINING PLAN CONTAINED NO RETRAINING REQUIREMENTS FOR SEVERAL GROUPS OF EMPLOYEES, AND (3) THE TRAINING PLAN PROVIDED NO MEANS FOR EVALUATING THE EFFECTIVENESS OF THE TRAINING PLAN.
(7916 INFRACTION)

UNIT 1 TS 6.5.1.7.1.B AND UNIT 2 TS 6.5.1.7.B REQUIRES THE PLANT SAFETY COMMITTEE (PSC) TO RENDER DETERMINATIONS IN WRITING WITH REGARD TO WHETHER OR NOT PROCEDURES REVIEWED IN ACCORDANCE WITH UNIT 1 AND UNIT 2 TS 6.5.1.6.A CONSTITUTE AN UNREVIEWED SAFETY QUESTION. CONTRARY TO THE ABOVE, THE PSC DID NOT MAKE WRITTEN SAFETY EVALUATIONS OR RENDER DETERMINATIONS IN WRITING WITH REGARD TO WHETHER OR NOT THE PROCEDURES REVIEWED CONSTITUTED AN UNREVIEWED SAFETY QUESTION.
(7916 INFRACTION)

UNIT 1 AND UNIT 2 TS 6.5.2.7A REQUIRES THE SAFETY REVIEW COMMITTEE (SRC) TO REVIEW THE SAFETY EVALUATIONS FOR CHANGES TO EQUIPMENT OR SYSTEMS COMPLETED UNDER THE PROVISIONS OF 10 CFR 50.59 AND TO VERIFY THAT SUCH ACTIONS DID NOT CONSTITUTE AN UNREVIEWED SAFETY QUESTION. ADDITIONALLY, UNIT 1 AND UNIT 2 TS 6.5.2.1 REQUIRES THE SRC TO PERFORM THE ABOVE DESCRIBED REVIEW INDEPENDENTLY. CONTRARY TO THE ABOVE, INDEPENDENT REVIEWS HAD NOT BEEN PERFORMED. THE MANAGER OF LICENSING HAD IN-LINE RESPONSIBILITY FOR PREPARING THE INITIAL 10 CFR 50.59 REVIEW ON DESIGN CHANGES AND WAS ASSIGNED TO PERFORM THE SRC INDEPENDENT REVIEW OF THE SAME EVALUATIONS.
(7916 INFRACTION)

UNIT 2 TS 6.5.2.8.B REQUIRES SRC AUDITS TO ENCOMPASS THE PERFORMANCE, TRAINING, AND QUALIFICATIONS OF THE ENTIRE UNIT STAFF ONCE A YEAR. CONTRARY TO THE ABOVE, THE SRC DID NOT AUDIT NON-LICENSED TRAINING.
(7916 INFRACTION)

CONTRARY TO 10 CFR 19.12, THE LICENSEE HAD NOT INSTRUCTED ITS EMPLOYEES IN THEIR RESPONSIBILITY TO PROMPTLY REPORT TO THE LICENSEE ANY CONDITION WHICH MAY RESULT IN A VIOLATION OF REGULATORY REQUIREMENTS OR UNNECESSARY EXPOSURE TO RADIATION OR RADIOACTIVE MATERIAL.
(7916 DEFICIENCY)

CONTRARY TO ADMINISTRATIVE PROCEDURE 1005.17, CONTROL OF COMBUSTIBLES, THE INSPECTOR FOUND THAT CORRIDOR 98, ELEVATION 372' IN THE AUXILIARY BUILDING CONTAINED A BARREL HALF FULL OF MISCELLANEOUS COMBUSTIBLE TRASH AND A ONE GALLON SAFETY CAN CONTAINING SOLVENT.
(7922 INFRACTION)

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
79-21 03L-0	11/15/79	12/6/79	Containment isolation valve failure
79-22 03L-0	11/19/79	12/18/79	Failure to perform required surveillance on steam driven emergency feedwater pump

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

FACILITY ITEMS (PLANS AND PROCEDURES):

MANAGERIAL ITEMS

PLANT STATUS:

The plant is at 100 percent power with plans to shut down on 31 December in order to perform design changes required by NUREG 0578.

LAST IE SITE INSPECTION DATE: October 6 - November 21, 1979

INSPECTION REPORT NO: 50-313/79-22

SUMMARY

INSPECTION SUMMARY

Inspection conducted during period of September 9 through October 5, 1979 (79-21): Routine, announced inspection of the QA/QC Administrative Program, licensee actions taken in response to IE Bulletins, and follow-up on open items. One item of noncompliance was identified (deficiency - outdated Q-lists).

Inspection on November 5 - 9, (79-23): Routine, unannounced inspection of the licensee's program for control of maintenance and preventive maintenance. No items of noncompliance or deviations were identified.

Inspection conducted during period of October 6 through November 21, 1979 (79-22): Routine, announced inspection of previously identified inspection items, plant operations, surveillance testing and calibration control program, and personnel qualification program. One item of noncompliance was identified (infraction - control of combustibles).

(7914 INFRACTION)

UNIT 1 TS 6.5.1.7.1.B AND UNIT 2 TS 6.5.1.7.B REQUIRES THE PLANT SAFETY COMMITTEE (PSC) TO RENDER DETERMINATIONS IN WRITING WITH REGARD TO WHETHER OR NOT PROCEDURES REVIEWED IN ACCORDANCE WITH UNIT 1 AND UNIT 2 TS 6.5.1.6.A CONSTITUTE AN UNREVIEWED SAFETY QUESTION. CONTRARY TO THE ABOVE, THE PSC DID NOT MAKE WRITTEN SAFETY EVALUATIONS OR RENDER DETERMINATIONS IN WRITING WITH REGARD TO WHETHER OR NOT THE PROCEDURES REVIEWED CONSTITUTED AN UNREVIEWED SAFETY QUESTION.
(7914 INFRACTION)

UNIT 1 AND UNIT 2 TS 6.5.2.7A REQUIRES THE SAFETY REVIEW COMMITTEE (SRC) TO REVIEW THE SAFETY EVALUATIONS FOR CHANGES TO EQUIPMENT OR SYSTEMS COMPLETED UNDER THE PROVISIONS OF 10 CFR 50.59 AND TO VERIFY THAT SUCH ACTIONS DID NOT CONSITITUTE AN UNREVIEWED SAFETY QUESTION. ADDITONALLY, UNIT 1 AND UNIT 2 TS 6.5.2.1 REQUIRES THE SRC TO PERFORM THE ABOVE DESCRIBED REVIEW INDEPENDENTLY. CONTRARY TO THE ABOVE, INDEPENDENT REVIEWS HAD NOT BEEN PERFORMED. THE MANAGER OF LICENSING HAD IN-LINE RESPONSIBILITY FOR PREPARING THE INITIAL 10 CFR 50.59 REVIEW ON DESIGN CHANGES AND WAS ASSIGNED TO PERFORM THE SRC INDEPENDENT REVIEW OF THE SAME EVALUATIONS.
(7914 INFRACTION)

UNIT 2 TS 6.5.2.8.B REQUIRES SRC AUDITS TO ENCOMPASS THE PERFORMANCE, TRAINING, AND QUALIFICATIONS OF THE ENTIRE UNIT STAFF ONCE A YEAR. CONTRARY TO THE ABOVE, THE SRC DID NOT AUDIT NON-LICENSED TRAINING.
(7914 INFRACTION)

CONTRARY TO 10 CFR 19.12, THE LICENSEE HAD NOT INSTRUCTED ITS EMPLOYEES IN THEIR RESPONSIBILITY TO PROMPTLY REPORT TO THE LICENSEE ANY CONDITION WHICH MAY RESULT IN A VIOLATION OF REGULATORY REQUIREMENTS OR UNNECESSARY EXPOSURE TO RADIATION OR RADIOACTIVE MATERIAL.
(7914 DEFICIENCY)

CONTRARY TO ADMINISTRATIVE PROCEDURE QCP 1004.02, INITIATING AND PROCESSING OF TROUBLE REPORTS, THE DELTA-T SIGMA WEATHER STATION RECORDER (TR-9300) WAS INOPERABLE FOR A PERIOD OF ABOUT 35 HOURS BETWEEN OCTOBER 16 AND OCTOBER 18, 1979, AND OPERATIONS PERSONNEL DID NOT OBSERVE AND REPORT THE MALFUNCTION, EVEN THOUGH THE TECHNICAL SPECIFICATION DAILY CHANNEL CHECK ON THIS INSTRUMENT WAS PERFORMED TWICE DURING THIS PERIOD.
(7921 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

+ The 4 RTD's on the west side of the hot legs normally indicate a temperature about 3 degrees F higher than the 4 RTD's on the east side of the hot legs at 50 % power. This relationship occasionally reverses. A design change to minimize the effect of the anomaly on the Core Protection Calculators has been installed.

FACILITY ITEMS (PLANS AND PROCEDURES):

MANAGERIAL ITEMS:

PLANT STATUS:

+ The unit conducted post design change and power ascension testing during most of the month.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
79-87 03L-0	11/14/79	12/6/79	Low pressure safety injection flow orifice valve socket weld leak

LAST IE SITE INSPECTION DATE: October 6 - November 21, 1979 +

INSPECTION REPORT NO: 50-368/79-21 +

SUMMARY

INSPECTION SUMMARY

Inspection conducted during period of September 9 - October 5, 1979 (79-20): Routine, announced inspection of the QA/QC Administrative Program, licensee actions taken in response to IEB 79-04, licensee actions taken in response to IEB 79-14, and testing associated with investigating the hot leg temperature anomaly. Within the four areas inspected, no items of noncompliance were identified.

Inspection conducted during period of November 5 - 9, 1979 (79-22): Routine, unannounced inspection of the licensee's program for control of maintenance and preventive maintenance. Within the area inspected, no items of noncompliance or deviations were identified.

Inspection conducted during period of October 6 - November 21, 1979 (79-21): Routine, announced inspection of previously identified inspection items, plant operations, surveillance testing and calibration control program, and personnel qualification program. Within the four areas inspected, two items of noncompliance were identified (infraction - failure to adhere to procedure, and infraction - physical barrier).

INSPECTION STATUS

ENFORCEMENT STATUS

THERE WERE NO WRITTEN SAFETY ANALYSIS/EVALUATION CONTAINED IN OSC MINUTES 51-4 & 55-5 TO PROVIDE THE BASIS FOR THE OSC DETERMINATIONS REGARDING DC 0223, GENERATOR MANUAL FIELD FLASH & THE ASSOCIATED TEST PROCEDURE & DC 233, SAFETY INSPECTION LINE HANGERS.
(7918 INFRACTION)

AS OF 8/24/79, ISI PROCEDURE 5.8, REACTOR COOLANT SYSTEM HYDRAULIC PIPE SUPPORT EXAMINATION, REV 2, HAD NOT BEEN UPDATED TO REFLECT THE INSTALLATION OF A NEW SAFETY RELATED HYDRAULIC SNUBBER (SI-HS-529) NOR HAD THE LICENSEE SUBMITTED THE REQUIRED TS CHANGE TO NRC REQUESTING ADDITION OF THE HYDRAULIC SNUBBER TO TABLE 3.7.4.
(7918 INFRACTION)

NO PROCEDURE EXISTED WHICH REQUIRED THE ONSITE ENGINEERING GROUP TO FORWARD INFORMATION REGARDING A FIELD CHANGE TO THE CHARGING PUMP MODIFICATION TO THE RESPONSIBLE ENGINEERING GROUP FOR REVIEW. AS A RESULT THE FIELD CHANGE WAS ACCOMPLISHED AND THE PLANT RETURNED TO POWER OPERATION WITHOUT THE REQUIRED SEISMIC RE-ANALYSIS BEING ACCOMPLISHED.
(7918 INFRACTION)

AS OF 8/24/79, A NUMBER OF DRAWINGS WHICH ARE MAINTAINED IN THE STATION FILES DO NOT REFLECT THE AS-BUILT CONDITION AS DESCRIBED IN THE RESPECTIVE DESIGN CHANGES.
(7918 INFRACTION)

ON 8/24/79, A NUMBER OF EXAMPLES OF NONCOMPLIANCE WITH THE ANSI N45.2.9 REQUIREMENTS FOR THE STORAGE OF SINGLE COPY RECORDS WERE IDENTIFIED.
(7918 DEFICIENCY)

THE LICENSEE DID NOT COMPLY WITH COMMITMENTS MADE TO I&E IN LETTER C.N. DUNN TO B.H. GRIER DTD 11/29/79.
(7918 DEVIATION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

None.

FACILITY ITEMS (PLANS AND PROCEDURES):

The facility began an extended refueling/modification outage on 12/01/79 scheduled to last until late 7/80.

MANAGERIAL ITEMS:

A partial reorganization of station and corporate departments began on 12/16/79, and is expected to be fully implemented by 2/1/80.

PLANT STATUS:

Plant was operated at approximately 35% rated power through the reporting period and was shutdown on 11/30. The plant is presently in cold shutdown with preparations for refueling in progress.

LAST IE SITE INSPECTION DATE: 12/12/79

INSPECTION REPORT NO: 79-29

SUMMARY

INSPECTION SUMMARY

Aug 20-24 (79-18): Routine, unannounced inspection by two region-based inspectors (onsite-54 hours and corporate offices-26 hours). Inspection areas (6): QA/QC Administration; design changes/modification program; design changes/modifications; records management; offsite support staff; followup on previously identified items. Noncompliances: Five (Failure to store records; failure to document 10 CFR 50.59 evaluations; failure to maintain "As-Built" drawings in station files; failure to update T.S. and procedure subsequent to a modification; Station Engineering performing Category I engineering). Deviation: One (Failure to comply with commitments).

Oct 16-18 (79-23): Routine, onsite, unannounced inspection by one region-based inspector (31 hours). Inspection areas (3): General training; requalification training; craft personnel training. Noncompliances: One (Delinquent individual study).

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS

- Currently operating at 208 Mwt. Plan to shutdown for one to two weeks late on December 31, 1979 to make modifications to comply with the requirements of NUREG 0578.

LAST IE SITE INSPECTION DATE: November 13-16, 1979

INSPECTION REPORT NO: 79-16

SUMMARY

INSPECTION SUMMARY

- Inspection on November 6-7 and 15-16, (79-14): Licensee actions relative to IE Bulletins No. 79-14, No. 79-04, and No. 79-02 including general discussion on NRC requirements, work procedure review, observation of work, and followup on previous identified items. The inspection involved 11 inspector hours onsite and at the licensee's A-E office by one NRC inspector. No items of noncompliance or deviations were identified.
- Inspection on October 29 through November 1, (79-15): Included review of: Security Plan; Security Program Audit; Security Organization; Physical Barriers (Protected area); Physical Barriers (Vital area); Lighting; Access control (Identification, Authorization, and Badging); Access control (Search); Access control (Escorting); Access control (Vital areas); Alarm stations; Detection aids; Assessment aids; Communications; Testing and maintenance; Compensatory measures; Power Supply; Response; Locks, keys and combinations; Records and reports; Follow up of IE Bulletin 79-16. The inspection involved 60 inspector hours onsite by two NRC inspectors and 15 inspector hours were during offshift periods. The licensee was found to be in compliance with NRC requirements within the 20 areas examined except for the following two items. Access Control (Search) - The licensee did not conduct searches in accordance with security plan commitmemts; and Locks, keys and combinations - A communications cabinet was inadequately locked.
- Inspection on November 13-16, (79-16): Routine, unannounced inspection of shutdown margin determination; core power distribution limits; control rod scram time tests; control rod sequence and reactivity checks; reactivity anomaly determination; review of specification field change. The inspection involved 22 inspector hours onsite by one NRC inspector. Of all the areas inspected, no items of noncompliance or deviations were identified.

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-26/ 03L-0	11/01/79	12/03/79	30 Day LER	During monthly specific gravity checks on the Reactor Depressurizing System Battery C, Cell 48 read 1.194.
79-27/ 03L-0	11/15/79	12/11/79	30 Day LER	During power operation, the Emergency Condenser System temperatures indicated through seat leakage was occurring at the outlet valve, MO7053, of the No. 2 loop.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 50.59 AND EN DES EP 4.02, AN UNREVIEWED SAFETY QUESTION DETERMINATION (USQD) WILL BE MADE FOR ALL CHANGES TO THE FACILITY AS DESCRIBED IN THE SAFETY ANALYSIS REPORT. THE DETERMINATION SHALL ADDRESS THREE SPECIFIC ITEMS WHICH PROVIDE THE BASES FOR THE DETERMINATION THAT THE CHANGE DOES NOT INVOLVE AN UNREVIEWED SAFETY QUESTION. CONTRARY TO THE ABOVE, ENGINEERING CHANGE NOTICES P-0124, P-0081, L 2073 AND L 1967 WERE IMPLEMENTED WITH USQD'S WHICH DID NOT ADDRESS ALL THREE ITEMS NECESSARY TO ESTABLISH THAT THE DESIGN CHANGE DID NOT INVOLVE ANY UNREVIEWED SAFETY QUESTIONS.
(7930 INFRACTION)

AS REQUIRED BY 10 CFR 50, APPENDIX B, CRITERION III DESIGN CONTROL MEASURES SHALL PROVIDE FOR VERIFYING OR CHECKING THE ADEQUACY OF DESIGN, SUCH AS THE PERFORMANCE OF DESIGN REVIEWS. THE ACCEPTED QUALITY ASSURANCE PROGRAM COMMITS TVA TO ANSI N45.2.11-1974. ANSI N45.2.11, SECTION 3.1 STATES APPLICABLE DESIGN INPUTS, SUCH AS DESIGN BASES, REGULATORY REQUIREMENTS, CODES AND STANDARDS, SHALL BE IDENTIFIED, DOCUMENTED AND THEIR SELECTION REVIEWED AND APPROVED. DESIGN ANALYSES SHALL BE LEGIBLE AND BE IN A FORM SUITABLE FOR REPRODUCTION, FILING AND RETRIEVING. ADDITIONALLY, DESIGN DOCUMENTATION AND RECORDS WHICH PROVIDE EVIDENCE THAT THE DESIGN AND REVIEW PROCESS WAS PERFORMED IN ACCORDANCE WITH THE REQUIREMENTS OF THIS STANDARD SHALL BE COLLECTED, STORED AND MAINTAINED. CONTRARY TO THE ABOVE, 16 OF 16 SAFETY-RELATED DESIGN CHANGES REVIEWED SHOWED NO DOCUMENTARY EVIDENCE OF HAVING COMPLETED AND REVIEWED DESIGN INPUTS.
(7930 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATIONS 6.3.A.5 DETAILED WRITTEN PROCEDURES SHALL BE PREPARED, APPROVED AND ADHERED TO, FOR PREVENTIVE OR CORRECTIVE MAINTENANCE OPERATIONS WHICH COULD HAVE AN EFFECT ON THE SAFETY OF THE REACTOR. CONTRARY TO THE ABOVE, PROCEDURES WERE NOT BEING FOLLOWED FOR TROUBLE REPORTS 104531, 85353, 13512, 135958 AND 134173 A S FOLLOWS: (1) THESE WERE NOT BEING REVIEWED AS REQUIRED BY THE OQAM AND STANDARD PRACTICES BF 7.1; (2) THESE WERE NOT FILED AS REQUIRED BY STANDARD PRACTICES BAF8; AND (3) THESE WERE NOT DESIGNATED AS CRITICAL STRUCTURES, SYSTEMS AND COMPONENTS (CSSC) AS REQUIRED BY OQAM PART III, SECTION I, PARAGRAPH 4.2.
(7930 DEFICIENCY)

AS REQUIRED BY 10 CFR 50, APPENDIX B, CRITERION X, AN INSPECTION OF ACTIVITIES AFFECTING QUALITY SHALL BE PERFORMED BY INDIVIDUALS OTHER THAN THOSE WHO PERFORMED THE ACTIVITY. THE ACCEPTED QUALITY ASSURANCE PROGRAM, SECTION 17.2.10, REQUIRES INSPECTIONS TO BE PERFORMED DURING MAINTENANCE, MODIFICATIONS, OR REPAIR ACTIVITIES AFFECTING THE QUALITY OF CSSC ITEMS AT TVA PLANTS TO VERIFY CONFORMANCE WITH APPLICABLE REQUIREMENTS. CONTRARY TO THE ABOVE, UNIT 1 HPCI RUPTURE DISC WAS REPLACED AS REQUIRED BY TROUBLE REPORT 135958, WITHOUT THE NECESSARY INSPECTION REQUIREMENTS BEING SPECIFIED OR COMPLETED.
(7930 INFRACTION)

AS REQUIRED BY 10 CFR 50, APPENDIX B, CRITERION XI, A TEST PROGRAM SHALL BE ESTABLISHED WITH WRITTEN TEST PROCEDURES WHICH INCORPORATE THE REQUIREMENTS CONTAINED IN APPLICABLE DESIGN DOCUMENTS. THE ACCEPTED QUALITY ASSURANCE (QA) PROGRAM, SECTION 17.2.11, REQUIRES THAT MODIFICATIONS SHALL BE TESTED IN ACCORDANCE WITH ORIGINAL DESIGN REQUIREMENTS. THE UNREVIEWED SAFETY QUESTION DETERMINATION FOR ENGINEERING CHANGE NOTICE (ECN) L 1496, DISC REPLACEMENT OF FLOW CONTROL VALVES (FCV), STATED IN THE JUSTIFICATION FOR NO INCREASED POSSIBILITY OF ACCIDENT OR MALFUNCTION THAT THE CHATTERING FCV'S "WILL BE OPERATED OVER THEIR ENTIRE OPERATING RANGE AND OBSERVED BY QUALIFIED PERSONNEL...." CONTRARY TO THE ABOVE, RHR SERVICE WATER FCV'S 3-23-52, 3-23-34, 2-126, AND 3-23-40 WERE MODIFIED BUT THEY WERE NOT TESTED OVER THE ENTIRE OPERATING RANGE AND OBSERVED BY QUALIFIED PERSONNEL, AS REQUIRED BY THE UNREVIEWED SAFETY QUESTION DETERMINATION ANALYSIS.
(7930 INFRACTION)

AS REQUIRED BY 10 CFR 50, APPENDIX B, CRITERION XVII, "SUFFICIENT RECORDS SHALL BE MAINTAINED TO FURNISH EVIDENCE OF ACTIVITIES AFFECTING QUALITY...THE RECORDS SHALL ALSO INCLUDE CLOSELY RELATED DATA SUCH AS QUALIFICATIONS OF PERSONNEL...". THE ACCEPTED QUALITY ASSURANCE PROGRAM. SECTION 17.2.17 STATE IN PART, "THE PLANT SUPERINTENDENT SHALL PROVIDE STORAGE, PRESERVATION AND SAFEKEEPING OF THE REQUIRED QUALITY ASSURANCE RECORDS IN ACCORDANCE WITH TVA-ESTABLISHED REQUIREMENTS AND REGULATORY REQUIREMENTS...." CONTRARY TO THE ABOVE, CERTIFICATES OF TRAINING AND QUALIFICATION FOR INDIVIDUALS CONDUCTING RECEIVING INSPECTIONS WERE NOT BEING MAINTAINED BY THE PLANT QA STAFF. CONTRARY TO THE ABOVE, THE ACTUAL VOLTAGE READOUT WAS NOT PROPERLY ANNOTATED FOR ECN L 1911. CONTRARY TO THE ABOVE, MAINTENANCE INSTRUCTION MMI 14.4.1.3A (REQUIRED BY TROUBLE REPORT NUMBER 106568 WHICH WAS ISSUED FOR THE REPAIR OF A CRACKED SENSING LINE TO PT68-82) COULD NOT BE LOCATED. ADDITIONALLY, THE INSPECTION RECORDS FOR THIS ACTIVITY COULD NOT BE LOCATED.
(7930 DEFICIENCY)

NRC POWER RESTRICTIONS: NONE

SCHEDULED FORTY DAY REFUELING OUTAGE TO BEGIN JANUARY 4, 1980.

MANAGERIAL ITEMS:

NONE.

PLANT STATUS:

NINETY PERCENT FULL POWER OPERATION IN POWER COAST DOWN FOR END OF FUEL CYCLE.

LAST IE SITE INSPECTION DATE: DECEMBER 10-14, 1979

INSPECTION REPORT NO: 50-259/79-45

SUMMARY

INSPECTION SUMMARY

INSPECTION OCTOBER 22-27 (79-33): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 10 INSPECTOR-HOURS ON SITE IN THE AREAS OF CALIBRATION OF INPLANT TECHNICAL SPECIFICATION REQUIRED INSTRUMENTATION; CALIBRATION OF MEASURING AND TEST EQUIPMENT USED ON SAFETY RELATED SYSTEMS; SURVEILLANCE OF INPLANT TECHNICAL SPECIFICATION REQUIRED SYSTEMS (EQUIPMENT); AND REVIEW OF LICENSEE ACTION ON A PREVIOUS INSPECTION FINDING. OF THE FOUR AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION NOVEMBER 13-16 (79-40): AREAS INSPECTED INCLUDED REVIEW OF SECURITY ORGANIZATION, RESPONSE, SECURITY AUDIT, AND LICENSEE ACTION ON PREVIOUS INSPECTION FINDINGS. SINCE THE MANAGEMENT MEETING CONDUCTED JULY 24, 1979, INCREASED MANAGEMENT EMPHASIS HAS BEEN PLACED ON THE SECURITY PROGRAM THROUGH SECURITY AUDITS BY OFF-SITE TVA MANAGEMENT PERSONNEL, AND THE PLANT'S QUALITY ASSURANCE SECTION.

INSPECTION NOVEMBER 13-16 (79-41): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 19 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIOACTIVE WASTE TRANSPORTATION, BULLETIN FOLLOWUP, CIRCULAR FOLLOWUP, LICENSEE EVENT REPORT FOLLOWUP AND POSTING AND LABELLING INVOLVING POTENTIAL RADIATION HAZARDS. OF THE FIVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FOUR AREAS, ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE TO ADEQUATELY LABEL CERTAIN CONTAINERS OF RADIOACTIVE MATERIALS).

INSPECTION NOVEMBER 27 (79-43): THIS INSPECTION CONSISTED OF NRC REGIONAL RESPONSE TO AND SUBSEQUENT OBSERVATION OF A DRILL INVOLVING A SIMULATED RELEASE OF RADIOACTIVE MATERIALS RESULTING FROM A TRANPORTATION ACCIDENT.

AS REQUIRED BY 10 CFR 50, APPENDIX B, CRITERION XVIII, "A COMPREHENSIVE SYSTEM OF PLANNED AND PERIODIC AUDITS SHALL BE CARRIED OUT TO VERIFY COMPLIANCE WITH ALL ASPECTS OF THE QUALITY ASSURANCE PROGRAM...". THE ACCEPTED QUALITY ASSURANCE PROGRAM, SECTION 17.2.18 STATES IN PART, "AUDITS SHALL BE CONDUCTED IN ACCORDANCE WITH A FORMAL AUDIT SCHEDULE WHICH SHALL BE UPDATED AT LEAST EVERY SIX MONTHS. EACH ELEMENT OF THE OFFICE OF POWER QUALITY ASSURANCE PROGRAM, SUCH AS DESIGN AND DOCUMENT CONTROL, AND EACH AREA OF PLANT OPERATIONS, SUCH AS NORMAL OPERATION, INSERVICE INSPECTIONS, AND RADIOLOGICAL CONTROL, SHALL BE AUDITED AT LEAST ONCE EVERY TWO YEARS." CONTRARY TO THE ABOVE, THE OUTAGE GROUP HAD NOT BEEN AUDITED DURING THE PERIOD FROM OCTOBER 6, 1977 TO OCTOBER 12, 1979, AND WAS NOT SCHEDULED FOR FUTURE AUDITS.
(7930 INFRACTION)

CONTRARY TO 10 CFR 20.203(F)(1) AND (2) ON NOVEMBER 13, 1979 THE LICENSEE HAD NOT LABELED, WITH THE APPROPRIATE WARNINGS AND INFORMATION SEVERAL CONTAINERS LOCATED IN THE UNIT 2 AND 3 TURBINE BUILDINGS.
(7941 DEFICIENCY)

+ INSPECTION REPORT NO: 50-260/79-45

SUMMARY

INSPECTION SUMMARY

+ INSPECTION OCTOBER 22-27 (79-33): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 10 INSPECTOR-HOURS ON SITE IN THE AREAS OF CALIBRATION OF INPLANT TECHNICAL SPECIFICATION REQUIRED INSTRUMENTATION; CALIBRATION OF MEASURING AND TEST EQUIPMENT USED ON SAFETY RELATED SYSTEMS; SURVEILLANCE OF INPLANT TECHNICAL SPECIFICATION REQUIRED SYSTEMS (EQUIPMENT); AND REVIEW OF LICENSEE ACTION ON A PREVIOUS INSPECTION FINDING. OF THE FOUR AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION NOVEMBER 13-16 (79-40): AREAS INSPECTED INCLUDED REVIEW OF SECURITY ORGANIZATION, RESPONSE, SECURITY AUDIT, AND LICENSEE ACTION ON PREVIOUS INSPECTION FINDINGS. SINCE THE MANAGEMENT MEETING CONDUCTED JULY 24, 1979, INCREASED MANAGEMENT EMPHASIS HAS BEEN PLACED ON THE SECURITY PROGRAM THROUGH SECURITY AUDITS BY OFF-SITE TVA MANAGEMENT PERSONNEL, AND THE PLANT'S QUALITY ASSURANCE SECTION.

INSPECTION NOVEMBER 13-16 (79-41): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 20 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIOACTIVE WASTE TRANSPORTATION, BULLETIN FOLLOWUP, CIRCULAR FOLLOWUP, LICENSEE EVENT REPORT FOLLOWUP AND POSTING AND LABELLING INVOLVING POTENTIAL RADIATION HAZARDS. OF THE FIVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FOUR AREAS, ONE APPARENT ITEM OF NON-COMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE TO ADEQUATELY LABEL CERTAIN CONTAINERS OF RADIOACTIVE MATERIALS).

INSPECTION NOVEMBER 27 (79-43): THIS INSPECTION CONSISTED OF NRC REGIONAL RESPONSE TO AND SUBSEQUENT OBSERVATION OF A DRILL INVOLVING A SIMULATED RELEASE OF RADIOACTIVE MATERIALS RESULTING FROM A TRANPORTATION ACCIDENT. THE INSPECTION INVOLVED THREE INSPECTOR-HOURS BY TWO NRC INSPECTORS AND WAS BEGUN DURING THE REGULAR HOURS.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 50.59 AND EN DES EP 4.02, AN UNREVIEWED SAFETY QUESTION DETERMINATION (USQD) WILL BE MADE FOR ALL CHANGES TO THE FACILITY AS DESCRIBED IN THE SAFETY ANALYSIS REPORT. THE DETERMINATION SHALL ADDRESS THREE SPECIFIC ITEMS WHICH PROVIDE THE BASES FOR THE DETERMINATION THAT THE CHANGE DOES NOT INVOLVE AN UNREVIEWED SAFETY QUESTION. CONTRARY TO THE ABOVE, ENGINEERING CHANGE NOTICES P-0124, P-0081, L 2073 AND L 1967 WERE IMPLEMENTED WITH USQD'S WHICH DID NOT ADDRESS ALL THREE ITEMS NECESSARY TO ESTABLISH THAT THE DESIGN CHANGE DID NOT INVOLVE ANY UNREVIEWED SAFETY QUESTIONS.
(7930 INFRACTION)

AS REQUIRED BY 10 CFR 50, APPENDIX B, CRITERION III DESIGN CONTROL MEASURES SHALL PROVIDE FOR VERIFYING OR CHECKING THE ADEQUACY OF DESIGN, SUCH AS THE PERFORMANCE OF DESIGN REVIEWS. THE ACCEPTED QUALITY ASSURANCE PROGRAM COMMITS TVA TO ANSI N45.2.11-1974. ANSI N45.2.11, SECTION 3.1 STATES APPLICABLE DESIGN INPUTS, SUCH AS DESIGN BASES, REGULATORY REQUIREMENTS, CODES AND STANDARDS, SHALL BE IDENTIFIED, DOCUMENTED AND THEIR SELECTION REVIEWED AND APPROVED. DESIGN ANALYSES SHALL BE LEGIBLE AND BE IN A FORM SUITABLE FOR REPRODUCTION, FILING AND RETRIEVING. ADDITIONALLY, DESIGN DOCUMENTATION AND RECORDS WHICH PROVIDE EVIDENCE THAT THE DESIGN AND REVIEW PROCESS WAS PERFORMED IN ACCORDANCE WITH THE REQUIREMENTS OF THIS STANDARD SHALL BE COLLECTED, STORED AND MAINTAINED. CONTRARY TO THE ABOVE, 16 OF 16 SAFETY-RELATED DESIGN CHANGES REVIEWED SHOWED NO DOCUMENTARY EVIDENCE OF HAVING COMPLETED AND REVIEWED DESIGN INPUTS.
(7930 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATIONS 6.3.A.5 DETAILED WRITTEN PROCEDURES SHALL BE PREPARED, APPROVED AND ADHERED TO, FOR PREVENTIVE OR CORRECTIVE MAINTENANCE OPERATIONS WHICH COULD HAVE AN EFFECT ON THE SAFETY OF THE REACTOR. CONTRARY TO THE ABOVE, PROCEDURES WERE NOT BEING FOLLOWED FOR TROUBLE REPORTS 104531, 85353, 13512, 135958 AND 134173 A S FOLLOWS: (1) THESE WERE NOT BEING REVIEWED AS REQUIRED BY THE OQAM AND STANDARD PRACTICES BF 7.1; (2) THESE WERE NOT FILED AS REQUIRED BY STANDARD PRACTICES BAF8; AND (3) THESE WERE NOT DESIGNATED AS CRITICAL STRUCTURES, SYSTEMS AND COMPONENTS (CSSC) AS REQUIRED BY OQAM PART III, SECTION I, PARAGRAPH 4.2.
(7930 DEFICIENCY)

AS REQUIRED BY 10 CFR 50, APPENDIX B, CRITERION XI, A TEST PROGRAM SHALL BE ESTABLISHED WITH WRITTEN TEST PROCEDURES WHICH INCORPORATE THE REQUIREMENTS CONTAINED IN APPLICABLE DESIGN DOCUMENTS. THE ACCEPTED QUALITY ASSURANCE (QA) PROGRAM, SECTION 17.2.11, REQUIRES THAT MODIFICATIONS SHALL BE TESTED IN ACCORDANCE WITH ORIGINAL DESIGN REQUIREMENTS. THE UNREVIEWED SAFETY QUESTION DETERMINATION FOR ENGINEERING CHANGE NOTICE (ECN) L 1496, DISC REPLACEMENT OF FLOW CONTROL VALVES (FCV), STATED IN THE JUSTIFICATION FOR NO INCREASED POSSIBILITY OF ACCIDENT OR MALFUNCTION THAT THE CHATTERING FCV'S "WILL BE OPERATED OVER THEIR ENTIRE OPERATING RANGE AND OBSERVED BY QUALIFIED PERSONNEL...." CONTRARY TO THE ABOVE, RHR SERVICE WATER FCV'S 3-23-52, 3-23-34, 2-126, AND 3-23-40 WERE MODIFIED BUT THEY WERE NOT TESTED OVER THE ENTIRE OPERATING RANGE AND OBSERVED BY QUALIFIED PERSONNEL, AS REQUIRED BY THE UNREVIEWED SAFETY QUESTION DETERMINATION ANALYSIS.
(7930 INFRACTION)

AS REQUIRED BY 10 CFR 50, APPENDIX B, CRITERION XVII, "SUFFICIENT RECORDS SHALL BE MAINTAINED TO FURNISH EVIDENCE OF ACTIVITIES AFFECTING QUALITY...THE RECORDS SHALL ALSO INCLUDE CLOSELY RELATED DATA SUCH AS QUALIFICATIONS OF PERSONNEL...". THE ACCEPTED QUALITY ASSURANCE PROGRAM, SECTION 17.2.17 STATE IN PART, "THE PLANT SUPERINTENDENT SHALL PROVIDE STORAGE, PRESERVATION AND SAFEKEEPING OF THE REQUIRED QUALITY ASSURANCE RECORDS IN ACCORDANCE WITH TVA-ESTABLISHED REQUIREMENTS AND REGULATORY REQUIREMENTS...". CONTRARY TO THE ABOVE, CERTIFICATES OF TRAINING AND QUALIFICATION FOR INDIVIDUALS CONDUCTING RECEIVING INSPECTIONS WERE NOT BEING MAINTAINED BY THE PLANT QA STAFF. CONTRARY TO THE ABOVE, THE ACTUAL VOLTAGE READOUT WAS NOT PROPERLY ANNOTATED FOR ECN L 1911. CONTRARY TO THE ABOVE, MAINTENANCE INSTRUCTION MMI 14.4.1.3A (REQUIRED BY TROUBLE REPORT NUMBER 106568 WHICH WAS ISSUED FOR THE REPAIR OF A CRACKED SENSING LINE TO PT68-82) COULD NOT BE LOCATED. ADDITIONALLY, THE INSPECTION RECORDS FOR THIS ACTIVITY COULD NOT BE LOCATED.
(7930 DEFICIENCY)

AS REQUIRED BY 10 CFR 50, APPENDIX B, CRITERION XVIII, "A COMPREHENSIVE SYSTEM OF PLANNED AND PERIODIC AUDITS SHALL BE CARRIED OUT TO VERIFY COMPLIANCE WITH ALL ASPECTS OF THE QUALITY ASSURANCE PROGRAM...." THE ACCEPTED QUALITY ASSURANCE PROGRAM, SECTION 17.2.18 STATES IN PART, "AUDITS SHALL BE CONDUCTED IN ACCORDANCE WITH A FORMAL AUDIT SCHEDULE WHICH SHALL BE UPDATED AT LEAST EVERY SIX MONTHS. EACH ELEMENT OF THE OFFICE OF POWER QUALITY ASSURANCE PROGRAM, SUCH AS DESIGN AND DOCUMENT CONTROL, AND EACH AREA OF PLANT OPERATIONS, SUCH AS NORMAL OPERATION, INSERVICE INSPECTIONS, AND RADIOLOGICAL CONTROL, SHALL BE AUDITED AT LEAST ONCE EVERY TWO YEARS." CONTRARY TO THE ABOVE, THE OUTAGE GROUP HAD NOT BEEN AUDITED DURING THE PERIOD FROM OCTOBER 6, 1977 TO OCTOBER 12, 1979, AND WAS NOT SCHEDULED FOR FUTURE AUDITS.
(7930 INFRACTION)

AS REQUIRED BY 10 CFR 50, APPENDIX B, CRITERION V, INSTRUCTION PROCEDURES AND DRAWINGS, "ACTIVITIES AFFECTING QUALITY SHALL BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS ... AND SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THESE INSTRUCTIONS...". THE ACCEPTED QUALITY ASSURANCE PROGRAM, TVA-TR75-1A, REV. 3, STATES IN PART, "MEASURING AND TEST EQUIPMENT UTILIZED IN OR RELATED TO OPERATION OF TVA'S NUCLEAR PLANTS SHALL BE CONTROLLED IN ACCORDANCE WITH WRITTEN PROCEDURES OR INSTRUCTIONS." BROWNS FERRY OPERATIONAL QUALITY ASSURANCE MANUAL 3.4.1. "MEASURING AND TEST EQUIPMENT WHOSE CALIBRATION DUE DATE HAS PASSED ... SHALL BE CLEARLY TAGGED TO INDICATE ITS QUALITY STATUS, REMOVED FROM SERVICE, AND SEGREGATED FROM ACCEPTABLE EQUIPMENT. CONTRARY TO THE ABOVE, ACTICITIES AFFECTING QUALITY WERE NOT ACCOMPLISHED IN ACCORDANCE WITH THE INSTRUCTIONS IN THAT CURRENT CALIBRATOR C-4, WAS NOT TAGGED NOR SEGREGATED FROM ACCEPTABLE EQUIPMENT ON 10/24/79. FURTHER THE EQUIPMENT HAD BEEN USED ELEVEN TIMES TO CALIBRATE SAFETY RELATED INSTRUMENTS IN UNIT 3 SINCE THE LAST CALIBRATED DUE DATE OF 8/6/79.
(7933 INFRACTION)

TECHNICAL SPECIFICATION 3.10.A.1 REQUIRES THAT THE REACTOR MODE SWITCH SHALL BE LOCKED IN THE 'REFUEL' POSITION DURING CORE ALTERATIONS. CONTRARY TO THE ABOVE, DURING CORE ALTERATIONS ON NOVEMBER 9, 1979 THE REACTOR MODE SWITCH WAS OBSERVED TO BE IN THE REFUEL POSITION BUT THE KEY WAS LEFT INSERTED IN THE LOCK, THUS ALLOWING THE SWITCH THE CAPABILITY OF BEING READILY MANIPULATED.
(7936 INFRACTION)

CONTRARY TO 10 CFR 20.203(F)(1) AND (2) ON NOVEMBER 13, 1979 THE LICENSEE HAD NOT LABELED, WITH THE APPROPRIATE WARNINGS AND INFORMATION SEVERAL CONTAINERS LOCATED IN THE UNIT 2 AND 3 TURBINE BUILDINGS.
(7941 DEFICIENCY)

LAST IE SITE INSPECTION DATE: DECEMBER 10-14, 1979

INSPECTION REPORT NO: 50-296/79-45

SUMMARY

INSPECTION SUMMARY

INSPECTION OCTOBER 22-27 (79-33): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 11 INSPECTOR-HOURS ON SITE IN THE AREAS OF CALIBRATION OF INPLANT TECHNICAL SPECIFICATION REQUIRED INSTRUMENTATION; CALIBRATION OF MEASURING AND TEST EQUIPMENT USED ON SAFETY RELATED SYSTEMS; SURVEILLANCE OF INPLANT TECHNICAL SPECIFICATION REQUIRED SYSTEMS (EQUIPMENT); AND REVIEW OF LICENSEE ACTION ON A PREVIOUS INSPECTION FINDING. OF THE FOUR AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION NOVEMBER 13-16 (79-40): AREAS INSPECTED INCLUDED REVIEW OF SECURITY ORGANIZATION, RESPONSE, SECURITY AUDIT, AND LICENSEE ACTION ON PREVIOUS INSPECTION FINDINGS. SINCE THE MANAGEMENT MEETING CONDUCTED JULY 24, 1979, INCREASED MANAGEMENT EMPHASIS HAS BEEN PLACED ON THE SECURITY PROGRAM THROUGH SECURITY AUDITS BY OFF-SITE TVA MANAGEMENT PERSONNEL, AND THE PLANT'S QUALITY ASSURANCE SECTION.

INSPECTION NOVEMBER 13-16 (79-41): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 19 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIOACTIVE WASTE TRANSPORTATION, BULLETIN FOLLOWUP, CIRCULAR FOLLOWUP, LICENSEE EVENT REPORT FOLLOWUP AND POSTING AND LABELLING INVOLVING POTENTIAL RADIATION HAZARDS. OF THE FIVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FOUR AREAS, ONE APPARENT ITEM OF NON-COMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE TO ADEQUATELY LABEL CERTAIN CONTAINERS OF RADIOACTIVE MATERIALS).

INSPECTION NOVEMBER 27 (79-43): THIS INSPECTION CONSISTED OF NRC REGIONAL RESPONSE TO AND SUBSEQUENT OBSERVATION OF A DRILL INVOLVING A SIMULATED RELEASE OF RADIOACTIVE MATERIALS RESULTING FROM A TRANPORTATION ACCIDENT. THE INSPECTION INVOLVED THREE INSPECTOR-HOURS BY TWO NRC INSPECTORS AND

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY SECTION 3.7.2.2 OF THE TECHNICAL SPECIFICATIONS, WITH ONE OR MORE OF THE DIESEL GENERATOR SPRAY AND/OR SPRINKLER SYSTEMS INOPERABLE, ESTABLISH A CONTINUOUS FIRE WATCH WITH BACKUP FIRE SUPPRESSION EQUIPMENT WITHIN 1 HOUR. CONTRARY TO THE ABOVE ON OCTOBER 16 THE INSPECTOR FOUND FIRE PROTECTION SPRINKLER AND STANDPIPE SYSTEMS ISOLATED TO DIESEL GENERATOR NO 3. THE ISOLATED SYSTEMS WERE INDICATED BY LOW PRESSURE ANNUNCIATORS FOR THE SYSTEMS. A FOLLOWUP INVESTIGATION REVEALED THAT TWO DELUGE VALVES (DV-15 AND DV-17) HAD BEEN ISOLATED FOR MAINTENANCE BY MANUALLY CLOSING THREE ISOLATION VALVES. THIS ACTION WAS TAKEN WITHOUT NOTIFYING OPERATING PERSONNEL, AND HAVING THE SYSTEMS PLACED IN A LIMITING CONDITION FOR OPERATION (LCO) AND TAKING COMPENSATORY MEASURES REQUIRED BY THE TECHNICAL SPECIFICATIONS. AN LCO WAS ESTABLISHED AFTER THE INSPECTOR FOUND THE CONDITION, NOTIFIED OPERATING PERSONNEL AND THEY HAD INVESTIGATED THE CAUSE OF THE ANNUNICATOR ALARM.

LAST IE SITE INSPECTION DATE: OCTOBER 27 - NOVEMBER 30, 1979

INSPECTION REPORT NO: 50-325/79-43

SUMMARY

INSPECTION SUMMARY

INSPECTION OCTOBER 19-21 (79-38): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 86 INSPECTOR-HOURS ON SITE IN THE AREAS OF A REACTOR TRIP ON OCTOBER 19, 1979. OF THE AREA INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION SEPTEMBER 29 - OCTOBER 26 (79-39): THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED 27 MANHOURS OF INSPECTION TIME ON SITE OF PREVIOUSLY IDENTIFIED EVENTS, PLANT OPERATIONS, RADIATION PROTECTION, PHYSICAL PROTECTION, QUALITY ASSURANCE, ORGANIZATION AND ADMINISTRATION AND UNIT 1 MAINTENANCE. OF THE SIX AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FIVE AREAS. ONE APPARENT ITEM OF NONCOMPLIANCE WAS IDENTIFIED IN ONE AREA - FAILURE TO RECOGNIZE THAT A LIMITING CONDITION FOR OPERATION WAS ESTABLISHED AND TAKE COMPENSATORY MEASURES REQUIRED BY TECHNICAL SPECIFICATIONS, WHEN FIRE PROTECTION DELUGE VALVES WERE MANUALLY ISOLATED, CAUSING ISOLATION OF SECTIONS OF THE SPRINKLER AND STANDPIPE SYSTEMS TO DIESEL GENERATOR NO. 3.

INSPECTION NOVEMBER 15-16 (79-40): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 18 INSPECTOR-HOURS ON SITE IN THE AREAS OF SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS (IE BULLETIN 79-14). NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION OCTOBER 27 - NOVEMBER 30 (79-43): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 59 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, PLANT TOURS, RADIATION PROTECTION, PHYSICAL PROTECTION, QUALITY ASSURANCE, ORGANIZATION AND ADMINISTRATION AND FOLLOWUP AND COVERAGE OF UNIT NO. 1 TRIPS. OF THE SEVEN AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

NRC POWER RESTRICTIONS: NONE

SUCTION & DISCHARGE VALVES WERE LEAKING EXCESSIVELY BY STEM PACKING. PACKING ADJUSTED & VALVE GLANDS REPACKED AS NEEDED TO STOP LEAKAGE. A SOLENOID FOR THE STAGING FLOW VALVE WAS FOUND DEFECTIVE.
024	12/12/79	S	215.0	D	2		SH	VALVEX	THE UNIT WAS SEPARATED FROM THE GRID TO PERFORM A PLANT MODIFICATION TO THE SAFETY/RELIEF VALVES AND A SCHEDULED PIPE SHUBBER INSPECTION. THE OUTAGE WAS EXTENDED DUE TO PROBLEMS WITH REBUILDING MECHANICAL SEALS ON THE 1B REACTOR RECIRCULATION PUMP.
025	12/21/79	F	2.1	B	1		SH	VALVEX	THE UNIT WAS PLACED ON THE GRID THEN SEPARATED FROM THE GRID FOR CONSTRUCTION TO MAKE REPAIRS TO THE SAFETY RELIEF VALVE MODIFICATION **(SEE OUTAGE NO. 79-024)**.

SUMMARY

THE UNIT EXPERIENCED MAJOR OUTAGE ON 12/01/79 DUE TO HIGH DRYWELL LEAKAGE FROM THE REACTOR RECIRCULATION SUCTION AND DISCHARGE VALVES, ON 12/12/79 TO ADD A SAFETY RELIEF VALVE POSITIVE INDICATION SYSTEM TO THE PLANT, AND ON 12/21/79 TO CORRECT PROBLEMS FROM THE 12/12/79 OUTAGE.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY SECTION 3.7.2.2 OF THE TECHNICAL SPECIFICATIONS, WITH ONE OR MORE OF THE DIESEL GENERATOR SPRAY AND/OR SPRINKLER SYSTEMS INOPERABLE, ESTABLISH A CONTINUOUS FIRE WATCH WITH BACKUP FIRE SUPPRESSION EQUIPMENT WITHIN 1 HOUR. CONTRARY TO THE ABOVE ON OCTOBER 16 THE INSPECTOR FOUND FIRE PROTECTION SPRINKLER AND STANDPIPE SYSTEMS ISOLATED TO DIESEL GENERATOR NO 3. THE ISOLATED SYSTEMS WERE INDICATED BY LOW PRESSURE ANNUNCIATORS FOR THE SYSTEMS. A FOLLOWUP INVESTIGATION REVEALED THAT TWO DELUGE VALVES (DV-15 AND DV-17) HAD BEEN ISOLATED FOR MAINTENANCE BY MANUALLY CLOSING THREE ISOLATION VALVES. THIS ACTION WAS TAKEN WITHOUT NOTIFYING OPERATING PERSONNEL, AND HAVING THE SYSTEMS PLACED IN A LIMITING CONDITION FOR OPERATION (LCO) AND TAKING COMPENSATORY MEASURES REQUIRED BY THE TECHNICAL SPECIFICATIONS. AN LCO WAS ESTABLISHED AFTER THE INSPECTOR FOUND THE CONDITION, NOTIFIED OPERATING PERSONNEL AND THEY HAD INVESTIGATED THE CAUSE OF THE ANNUNICATOR ALARM.
(7939 INFRACTION)

UNIT IS SHUTDOWN FOR REPAIRS.

LAST IE SITE INSPECTION DATE: OCTOBER 27 - NOVEMBER 30, 1979

INSPECTION REPORT NO: 50-324/79-39

SUMMARY

INSPECTION SUMMARY

INSPECTION SEPTEMBER 29 - OCTOBER 26 (79-37): THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED 25 MANHOURS OF INSPECTION TIME ON SITE OF PREVIOUSLY IDENTIFIED EVENTS, PLANT OPERATIONS, RADIATION PROTECTION, PHYSICAL PROTECTION, QUALITY ASSURANCE, ORGANIZATION AND ADMINISTRATION AND UNIT 1 MAINTENANCE. OF THE FIVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FOUR AREAS. ONE APPARENT ITEM OF NONCOMPLIANCE WAS IDENTIFIED IN ONE AREA - FAILURE TO RECOGNIZE THAT A LIMITING CONDITION FOR OPERATION WAS ESTABLISHED AND TAKE COMPENSATORY MEASURES REQUIRED BY TECHNICAL SPECIFICATIONS WHEN FIRE PROTECTION DELUGE VALVES WERE MANUALLY ISOLATED, CAUSING ISOLATION OF SECTIONS OF THE SPRINKLER AND STANDPIPE SYSTEMS TO DIESEL GENERATOR NO. 3.

INSPECTION NOVEMBER 15-16 (79-38): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 18 INSPECTOR-HOURS ON SITE IN THE AREAS OF SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS (IE BULLETIN 79-14). NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION OCTOBER 27 - NOVEMBER 30 (79-39): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 15 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, PLANT TOURS, RADIATION PROTECTION, PHYSICAL PROTECTION, QUALITY ASSURANCE, ORGANIZATION AND ADMINISTRATION AND FOLLOWUP AND COVERAGE OF UNIT NO. 1 TRIPS. OF THE SIX AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

THE SLEEVING PLATFORM WAS NOT FABRICATED TO SAFETY RELATED/SEISMIC STANDARDS. 10 CFR 50.59.
(7916 DEFICIENCY)

CONTRARY TO 10 CFR 55, APP A & ACCEPTED REQUALIFICATION PROGRAM, ALL LICENSED OPERATORS DID NOT ATTEND A LECTURE ON DESIGN CHANGES IN 1978. NOR WAS THERE DOCUMENTATION AVAILABLE THAT THEY REVIEWED THESE DESIGN CHANGES.
(7917 DEFICIENCY)

TS 6.11 REQUIRES THAT PROCEDURES FOR RADIATION PROTECTION BE ADHERED TO FOR ALL OPERATIONS INVOLVING PERSONNEL RADIATION EXPOSURE. PROCEDURE RCPR3-310, "PERSONNEL DOSIMETRY QA" REQUIRES THAT AN EVALUATION BE PERFORMED & DOCUMENTED IN CASES WHERE THE DIFFERENCE BETWEEN AN INDIVIDUALS DOSE AS MEASURED BY SELF READING DOSIMETER DISAGREES BY MORE THAN 35% THAN HIS DOSE AS MEASURED BY THERMOLUMINESCENT DOSIMETERS. CONTRARY TO THIS REQUIREMENT, IN 6/79, 12 INDIVIDUALS HAD DOSIMETER DISCREPANCIES OF GREATER THAN 35% AS THE REQUIRED EVALUATION WAS NOT PERFORMED.
(7918 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

Possible oxygen intrusion in September 1979 being evaluated as creating a core crud loading responsible for observed axial power imbalance and core differential pressure increases.

FACILITY ITEMS (PLANS AND PROCEDURES):

None

MANAGERIAL ITEMS:

The following managerial changes were made effective January 1, 1980:

Chairman of the Board and Chief Executive Officer - Bernard C. Trueschler
President and Chief Operating Officer - George V. McGowan
Vice President Electric Interconnection and Operations - John W. Gore, Jr.
Vice President Engineering and Construction - Chris H. Poindexter

PLANT STATUS:

Plant remained at approximately 50% power due to continued evaluation of the axial power imbalance.

LAST IE SITE INSPECTION DATE: 1/21/80

INSPECTION REPORT NO: 79-23

SUMMARY

INSPECTION SUMMARY

Nov 9-11, 13, & 15&16 (79-20): Routine, unannounced inspection by two regional based inspectors of licensee action on previous inspection findings. The inspection involved 2 hours onsite. Noncompliances: None.

Nov 27-30 (79-21): Routine, announced inspection for the purpose of turning over project inspector assignment for the facility. The inspection involved 11 hours onsite by two regional based inspectors. Noncompliances: None.

Dec 6-7 (79-22): Special, unannounced inspection by a regional based inspector (16 hours) to verify the licensee's actions as required by IE Bulletin 79-19 with respect to activities related to the transfer, packaging and shipping of low level radioactive waste materials. Noncompliances: None.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-052/03L	10/19/79	11/06/79	30 Day LER	Failure of the containment gaseous and particulate radioactivity monitoring system due to loss of the sampling pump
79-053/03L	09/28/79	10/25/79	30 Day LER	As a result of a broken actuator arm #11 shutdown cooling heat exchanger outlet valve was inoperable rendering #11 shutdown cooling heat exchanger inoperable
79-054/03L	09/29/79	10/25/79	30 Day LER	During operation failure of a welded cap on #11 component cooling heat exchanger salt water outlet valve rendered the #11 salt water system inoperable
79-055/03L	009/30/79	11/02/79	30 Day LER	During power operation a module failure caused the channel a power distribution setpoint to decrease. The channel was placed in bypass and subsequently repaired
79-058/03L	10/04/79	11/08/79	30 Day LER	Due to a faulty pneumatic converter #11 salt water outlet valve would not operate properly
79-059/03L	10/26/79	11/13/79	30 Day LER	During routine surveillance two fire hoses were found damaged. Both hoses were replaced
79-060/01L	10/20/79	11/15/79	30 Day LER	During a load test on #12 diesel generator high exhaust temperatures were experienced which resulted in the inability to achieve full load capability of 2500 KW
79-061/01T	10/24/79	11/07/79	Special	As a result of followup on IEB 79-14 it was discovered that the air start systems for the diesel generators did not meet seismic requirements
79-063/04T	10/22/79	11/05/79	14 Day LER	Oyster samples collected on August 27, 1979 showed the presence of Ag-110M at 266 pCi/KG
79-064/03L	11/01/79	11/13/79	30 Day LER	Fire barriers between the service building and intake structure were temporarily removed to facilitate cable installation
79-065/03L	11/13/79	12/04/79	30 Day LER	Emergency diesel generator removed from service to repair Woodward Governor
79-066/03L	11/20/79	12/10/79	30 Day LER	Containment cooler fan inoperable (hand switch failure)
79-068/03L	11/27/79	12/13/79	30 Day LER	No. 12 emergency diesel inoperable to repair service water vent valve
79-069/03L	11/27/79	12/13/79	30 Day LER	No. 11 emergency diesel generator inoperable leaking fuel oil line
79-071/03L	11/11/79	12/06/79	30 Day LER	Plant trip caused by 500 KV breaker malfunction
79-072/03L	11/16/79	12/06/79	30 Day LER	500 KV transmission line deenergized
79-075/04T	11/29/79	12/13/79	14 Day LER	Waste neutralizing tank overflowed resulting in unmonitored discharge

OTHER ITEMS OF INTEREST

PLANT STATUS

Plant shutdown on December 24, 1979, when design basis earthquake analysis data indicated that the containment air recirculation system ducting (12 inch pipe) would be stressed beyound yield. Start-up is expected on January 2, 1980.

LAST IE SITE INSPECTION DATE: September 1 through October 5, 1979

INSPECTION REPORT NO: 79-23

SUMMARY

INSPECTION SUMMARY

No inspections conducted.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-57/ 03L-0	10/29/79	11/28/79	30 Day LER	While shifting to RHR during a normal cooldown, motor operated containment isolation valve, ICM-111 (RHR Disch. to cold legs 2 & 3), failed to open completely and then would not close.
79-58/ 01T-0	11/15/79	11/29/79	14 Day LER	During normal operations while the turbine drive AFP was out of service for governor repairs, the flow path from the Unit 2 motor driven AFP to No. 1 and No. 4 steam generators on Unit 1 was made inoperable when the power supply to motor operated valves FMO-212 and FMO-242 was removed.
79-59/ 03L-0	11/08/79	12/07/79	30 Day LER	During the performance of a surveillance test procedure, ECR-31 (containment isolation valve for the containment air particulate detector) would not close.
79-60/ 03L-0	11/16/79	12/07/79	30 Day LER	During a routine ice condenser tour on two consecutive days, one intermediate deck door was found frozen shut.
79-61/ 03L-0	11/11/79	12/11/79	30 Day LER	During the startup of Unit 1, No. 4 steam flow channel I was found to be indicating approx. 21% lower than the redundant channel.
79-62/ 03L-0	11/11/79	12/11/79	30 Day LER	An inoperable steam flow channel (Channel I) was taken out of the trip condition for a period of 25 min.

SUMMARY

INSPECTION SUMMARY

No inspections conducted.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPROT	SUBJECT
79-38/01T-0	11/14/79	11/28/79	14 Day LER	During refueling operations the boron injection flow path required by TS 3.1.2.1 was inadvertently made inoperable to perform surveillance testing.
79-39/03L-0	10/31/79	11/28/79	30 Day LER	The containment air particulate detector (R-11) tripped on low flow while the plant was in Mode 6.
79-40/03L-0	11/01/79	11/29/79	30 Day LER	During refueling operations the reactor vessel head was unbolted with one source range neutron flux monitor inoperable.
79-41/03L-0	11/01/79	11/30/79	30 Day LER	During surveillance testing, hydrogen recombiner No. 1 failed to increase temp. greater than or equal to 1200 degrees F within 5 hours as required by TS 4.6.4.2B3.
79-42/03L-0	11/01/79	12/03/79	30 Day LER	While in mode 6, with one diesel generator (DG) out of service contractor personnel mistakenly began to determinate the operable DG's starting bus feed cable, blowing a fuse in the 1KV inverter.
79-43/03L-0	11/02/79	12/03/79	30 Day LER	During surveillance inspection per TS 4.6.5.9, the ice condenser divider barrier seal was found to have cracks in the rubber.
79-44/03L-0	10/25/79	12/07/79	30 Day LER	While transferring fuel from the new fuel vault to the spent fuel pit, the surveillance requirement for determining potential impact energy of the crane's load (TS 4.9.7.2) was not completed.

SUMMARY

INSPECTION SUMMARY

Inspection conducted October 23-26, November 5-7, 14-16, 1979 (79-16): Unannounced inspection of licensee's document control, Station Operations Review Committee, records program, review of plant operations, spent fuel storage racks, and follow-up on LER's and IE Bulletins. The inspection involved fifty-six (56) hours on site by one NRC inspector. The licensee was found to be in compliance with NRC requirements within the 6 areas examined during the inspection.

LAST IE SITE INSPECTION DATE: DECEMBER 17-19, 1979

INSPECTION REPORT NO: 50-302/79-54

SUMMARY

INSPECTION SUMMARY

INSPECTION OCTOBER 22-26 (79-45): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 30 INSPECTOR-HOURS ON SITE IN THE AREAS OF AUDITS OF PLANT OPERATIONS, OPERATIONS RECORDS REVIEW, SEISMIC RESTRAINT MODIFICATION AND PLANT TOUR. OF THE FOUR AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN THREE AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO PROPERLY SET THE ALARMS OF RADIATION MONITORS IN ACCORDANCE WITH THE RELEASE PERMIT PRIOR TO INITIATING A REACTOR BUILDING VENTILATION PURGE. THE PURGE WAS SECURED WHEN THE RADIATION LEVELS REACHED THE HIGHER SET POINTS).

INSPECTION NOVEMBER 5-9 (79-47): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 27 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS AND FOLLOWUP ON PREVIOUSLY IDENTIFIED ITEMS. OF THE TWO AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION NOVEMBER 13-16 (79-48): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 32 INSPECTOR-HOURS ON SITE IN THE AREAS OF FOLLOWUP ON PREVIOUS INSPECTION FINDINGS, REVIEW OF PLANT OPERATIONS, REVIEW OF ELECTRICAL POWER DISTRIBUTION SYSTEM FOR THE ICS AND NNI SYSTEMS, AND SURVEILLANCE MONITORING. AN ADDITIONAL TWENTY HOURS WERE SPENT IN THE REGIONAL OFFICE REVIEWING THE PLANT'S INTEGRATED CONTROL SYSTEM AND NONNUCLEAR INSTRUMENTATION SYSTEM AND THEIR RESPONSE TO A LOSS OF AC POWER. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION NOVEMBER 19-21 (79-51): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 18 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS AND REVIEW OF LICENSEE EVENT REPORTS. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 3.3.2.1 REQUIRES, IN PART, THAT THE EMERGENCY DIESEL GENERATOR SEQUENCE LOGIC CHANNELS BE OPERABLE WHEN THE REACTOR COOLANT SYSTEM IS ABOVE 200 DEGREES F. THE OPERABILITY OF THE SEQUENCE LOGIC CHANNELS DEPENDS UPON THE OPERABILITY OF THE ESSENTIAL BUS FEEDER BREAKER TRIP (90%) UNDERVOLTAGE SENSING RELAYS DESCRIBED IN TECHNICAL SPECIFICATION TABLE 3.3-4. CONTRARY TO THE ABOVE, ON NOVEMBER 4, 1978, DURING THE PERFORMANCE OF THE NATURAL CIRCULATION TEST AND ON SEVERAL OTHER OCCASIONS PRIOR TO DECEMBER 1978, CERTAIN SEQUENCE LOGIC CHANNELS WERE RENDERED INOPERABLE FOR SHORT PERIODS OF TIME WHEN THE REACTOR COOLANT SYSTEM AVERAGE TEMPERATURE WAS ABOVE 200 DEGREES F. THIS WAS ACCOMPLISHED BY DISABLING THE 90% UNDERVOLTAGE SENSING RELAYS WHEN STARTING A REACTOR COOLANT OR CIRCULATING WATER PUMP.
(7928 INFRACTION)

TECHNICAL SPECIFICATION 6.5.1.6.E REQUIRES THE STATION REVIEW BOARD TO INVESTIGATE ALL VIOLATIONS OF TECHNICAL SPECIFICATIONS INCLUDING PREPARATION AND FORWARDING REPORTS COVERING EVALUATION AND RECOMMENDATIONS TO PREVENT RECURRENCE TO THE VICE PRESIDENT - ENERGY SUPPLY AND TO THE CHAIRMAN OF THE COMPANY NUCLEAR REVIEW BOARD. CONTRARY TO THE ABOVE, THE STATION REVIEW BOARD DID NOT INVESTIGATE THE VIOLATIONS OF TECHNICAL SPECIFICATION AND PREPARE A REPORT FOR THE ITEMS CONTAINED IN IE INSPECTION REPORT NO. 50-346/79-04 DATED MARCH 28, 1979.
(7928 INFRACTION)

+LAST IE SITE INSPECTION DATE: October 1 through November 2, 1979

+ INSPECTION REPORT NO: 79-22

SUMMARY

INSPECTION SUMMARY

+ Inspection on October 9-12, 15-18 and 31, (79-21): Included a review of the Security Plan, Security Program Audit; Security organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys and Combinations; Followup on Previous items of noncompliance; and Followup on IE Bulletin No. 79-16. The inspection involved 107 inspector hours onsite by two NRC inspectors. The inspection began during the back shift period; 12 inspector hours were accomplished during offshift periods. The licensee was found to be in compliance with NRC requirements within the areas examined except for the following items: Physical Barriers/Protected Area - The licensee failed to maintain the isolation zone of the protected area; Physical Barriers/Vital Area - The vital area personnel doors required modifications which would make them resistant to attack; Access Controls (Escort) - The licensee failed to control a licensee designated vehicle; Communications - The door to the telephone relay switching room was found unsecured and unattended; Testing and Maintenance - The licensee failed to test the metal detectors utilized for ingress searching according to the manufacturer's instructions. Two items of concern were noted. These items, which related to the licensee's implementation schedule of new security systems and the area of vital area authorization, were discussed in a meeting with corporate management on October 31, 1979. This meeting involved six hours by four NRC Region III personnel. The licensee's response to IE Bulletin No. 79-16 is considered an outstanding item and is being referred to IE for consideration.

+ Inspection on October 1 through November 2, (79-22): Routine, unannounced resident inspection of maintenance activities; plant operations; physical protection-security organization, physical barriers, access control (identification, authorization, badging, search and escorting), and communications; and followup on licensee event reports. The inspection involved 121 inspector hours onsite by one NRC inspector. Of the seven areas inspected, no items of noncompliance or deviations were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

UNIT 3 TECHNICAL SPECIFICATIONS. SECTION 6.2.A REQUIRES THAT DETAILED PROCEDURES INVOLVING OPERATION OF COMPONENTS INVOLVING NUCLEAR SAFETY OF THE FACILITY BE PREPARED, APPROVED, AND ADHERED TO. LICENSEE PROCEDURE DOP 2000-2-M1, "A AND B WASTE COLLECTOR FILTERS MANUAL VALVE LINE-UP CHECKLISTS," DELINEATES THE PROPER VALVE LINE-UP FOR A AND B WASTE COLLECTOR SYSTEM OPERATIONS. CONTRARY TO THE ABOVE, ON OCTOBER 25, 1979, A LICENSEE EMPLOYEE (AN UNQUALIFIED EQUIPMENT ATTENDANT) FAILED TO MAKE VALVING EVOLUTIONS IN ACCORDANCE WITH DOP 2000-2-M1, WHICH RESULTED IN THE OVERFILLING OF THE UNIT 3 SPENT FUEL POOL AND SUBSEQUENT CONTAMINATION OF THE UNIT 3 REACTOR BUILDING WITH LOW LEVEL RADIOACTIVE MATERIAL.
(7924 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS

The unit is operating at 70% power (Administrative Restriction Imposed by licensee) due to increase in offgas activity and 7 x 7 fuel assembly cladding degradation.

*LAST IE SITE INSPECTION DATE: October 1 through November 2, 1979

* INSPECTION REPORT NO: 79-24

SUMMARY

INSPECTION SUMMARY

* Inspection on October 9-12, 15-18 and 31, (79-22): Included a review of the Security Plan, Security Program Audit; Security organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys and Combinations; Followup on Previous items of noncompliance; and Followup on IE Bulletin No. 79-16. The inspection involved 107 inspector hours onsite by two NRC inspectors. The inspection began during the back shift period; 12 inspector hours were accomplished during offshift periods. The licensee was found to be in compliance with NRC requirements within the areas examined except for the following items: Physical Barriers/Protected Area - The licensee failed to maintain the isolation zone of the protected area; Physical Barriers/Vital Area - The vital area personnel doors required modifications which would make them resistant to attack; Access Controls (Escort) - The licensee failed to control a licensee designated vehicle; Communications - The door to the telephone relay switching room was found unsecured and unattended; Testing and Maintenance - The licensee failed to test the metal detectors utilized for ingress searching according to the manufacturer's instructions. Two items of concern were noted. These items, which related to the licensee's implementation schedule of new security systems and the area of vital area authorization, were discussed in a meeting with corporate management on October 31, 1979. This meeting involved six hours by four NRC Region III personnel. The licensee's response to IE Bulletin No. 79-16 is considered an outstanding item and is being referred to IE for consideration.

-* Inspection on October 1 through November 2, (79-24): Routine, unannounced resident inspection of maintenance activities; plant operations; physical protection-security organization, physical barriers, access control (identification, authorization, badging, search and escorting), and communications; and followup on licensee event reports. The inspection involved 121 inspector hours onsite by one NRC inspector. Of the seven areas inspected, there were no items of noncompliance identified in six areas. One item of noncompliance (failure to follow procedures) was identified in one area.

*LAST IE SITE INSPECTION DATE: November 28-29, 1979

* INSPECTION REPORT NO: 79-30

SUMMARY

INSPECTION SUMMARY

* Inspection on October 29 through November 2, (79-28): Included a review of Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys, and Combinations; Records and Reports; Followup on Previous Items of Noncompliance; Followup on IE Bulletin No. 79-16. The inspection involved 84 inspector hours onsite by two NRC ispectors. The inspection began during the day shift period; 12 inspector hours were accomplished during offshift periods. The licensee was found to be in compliance with NRC requirements within the 20 areas examined during this inspection except for the following four items: Access Control (Vital Areas) - The licensee failed to provide positive access control to both an ICAA and a vital area; Security Organization - Incomplete documentation on the training and qualification records of several security guards; Access Control (Search) - One vehicle which entered the protected area was not properly searched; and Locks, Keys, and Combinations - Some keys were not properly controlled.

* Inspection on November 27-28, (79-29): Nonroutine, announced inspection of the licensee's response to IE Bulletin No. 79-19. The inspection involved 15 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

* Inspection on November 28-29, (79-30): Routine, unannounced inspection of previously identified outstanding items and follow-up to IE Bulletin No. 79-02, Pipe Support Base Plate Designs Using Concrete Expansion Anchors. The inspection involved 14 inspector hours onsite by one NRC inspector. No items of noncompliance were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 4.3-3.2.A, A MONTHLY CHANNEL FUNCTIONAL TEST OF FUEL STORAGE POOL AREA PROCESS MONITORS A & B SHALL BE DONE WHEN IRRADIATED FUEL IS IN THE STORAGE POOL. CONTRARY TO THE ABOVE, A REVIEW OF SURVEILLANCE TEST PROCEDURE FNP-1-STP-43.0, FUEL STORAGE POOL PROCESS MONITOR A & B - MONTHLY FUNCTIONAL TEST, FOR THE PERIOD APRIL TO SEPTEMBER 1979, INDICATED THAT THE FUNCTIONAL TEST WAS NOT PERFORMED FOR THE MONTH OF MAY 1979.
(7936 DEFICIENCY)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.1.C, WRITTEN PROCEDURES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED, COVERING THE ACTIVITIES CONCERNING SURVEILLANCE AND TEST OF SAFETY RELATED EQUIPMENT. SECTION 3.2.9 OF FARLEY NUCLEAR PLANT ADMINISTRATIVE PROCEDURE AP-5, SURVEILLANCE PROGRAM ADMINISTRATIVE CONTROL, REQUIRES THAT RESULTS OF SURVEILLANCE TEST SHALL BE REVIEWED BY EACH PLANT STAFF GROUP PERFORMING THE TESTS TO DETERMINE THAT ALL REQUIRED DATA HAS BEEN PROPERLY RECORDED AND SIGNED-OFF OR INITIALED WHERE REQUIRED. CONTRARY TO THE ABOVE, THE REQUIRED SIGNATURES WERE OMITTED A TOTAL OF EIGHT DIFFERENT PLACES THROUGHOUT STP-33.0 (SOLID STATE PROTECTION SYSTEM TRAIN A(B) OPERABILITY TEST) WHICH WAS PERFORMED ON 12/9/78 AND STP-7.0 (QUADRANT POWER TILT RATIO CALCULATION) WHICH WAS PERFORMED ON 1/22/79 AND 2/18/79 RESPECTIVELY. ALTHOUGH THESE DOCUMENTS HAD RECEIVED TWO LEVELS OF REVIEW, THE OMISSION HAD NOT BEEN IDENTIFIED.

SUMMARY

INSPECTION SUMMARY

+ INSPECTION NOVEMBER 7-8 (79-35): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 28 INSPECTOR-HOURS AT THE GENERAL OFFICES IN REVIEW OF PROCEDURES AND CONTROLS ADOPTED BY ALABAMA POWER COMPANY (APCO) TO IMPLEMENT THE REQUIREMENTS OF 10 CFR PART 21. ONE ITEM OF NONCOMPLIANCE INVOLVING ADEQUACY AND IMPLEMENTATION OF PROCEDURES TO IMPLEMENT THE REQUIREMENTS OF 10 CFR 21 WAS IDENTIFIED (INFRACTION - PART 21 EVALUATION).

INSPECTION NOVEMBER 5-9 AND 13-16 (79-36): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 113 INSPECTOR-HOURS ON SITE IN THE AREAS OF COORDINATION WITH OFFSITE SUPPORT AGENCIES: EMERGENCY FACILITIES, EQUIPMENT AND PROCEDURES; MEANS FOR DETERMINING A RELEASE; EMERGENCY TRAINING; EMERGENCY DRILLS; FIRE BRIGADE ORGANIZATION AND TRAINING; EMERGENCY ORGANIZATION; IE BULLETIN 79-18; FOLLOWUP ON PREVIOUS INSPECTION FINDINGS AND FOLLOWUP ON MEDICAL EMERGENCY OF APRIL 6, 1979. OF THE TEN AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN NINE AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE TO PERFORM MONTHLY CHANNEL FUNCTIONAL TEST ON PROCESS MONITORS R-25 A&B FOR THE FUEL STORAGE POOL AREA AS REQUIRED BY TECHNICAL SPECIFICATIONS 4.3.3).

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
029	11/30/79	F	3.2	G	4		HH	CKTBKR	CONTINUATION FROM 11/30/79. THE UNIT LOSS OF SGFP SUCTION PRESSURE.
030	12/01/79	F	6.7	H	5		HC	XXXXXX	UNIT WAS LIMITED TO 32% REACTOR POWER DUE TO DECREASING CONDENSER VACUUM. CAUSE UNKNOWN.
031	12/02/79	S	19.2	B	9		HH	PUMPXX	GENERATOR WAS TAKEN OFF-LINE TO ISOLATE 1B SGFP FOR REPAIRS. GENERATOR RETURNED ON-LINE.
032	12/03/79	F	7.3	B	5		HH	PIPEXX	UNIT WAS LIMITED TO 57% REACTOR POWER DUE TO LOW OIL PRESSURE ON 1A SGFP. EH FLUID LEAK WAS REPAIRED.
033	12/03/79	F	20.0	B	5		HH	PUMPXX	UNIT WAS LIMITED TO 65% REACTOR POWER WITH ONLY ONE SGFP IN SERVICE. 1B SGFP BEING REPAIRED.
034	12/04/79	F	5.7	B	5	79-062	HA	MECFUN	UNIT WAS REDUCED TO 39% REACTOR POWER DUE TO PROBLEMS WITH THE DEH VIDAR UNIT. VIDAR UNIT WAS REPAIRED.
035	12/05/79	F	16.1	B	5		HH	PUMPXX	UNIT WAS LIMITED TO 65% REACTOR POWER WITH ONLY ONE SGFP IN SERVICE. 1B SGFP BEING REPAIRED.
036	12/08/79	S	5.6	B	5		HJ	ZZZZZZ	UNIT WAS REDUCED TO 89% REACTOR POWER FOR PURPOSES OF REACTOR POWER DISTRIBUTION CONTROL.
037	12/15/79	S	10.0	B	5		HA	VALVEX	UNIT WAS REDUCED TO 65% REACTOR POWER TO COLLECT VALVE DATA FOR THE TURBINE CONTROL VALVE MANAGEMENT PROGRAM. INCORE-EXCORE NUCLEAR INSTRUMENTATION CROSS-CALIBRATION PERFORMED.
038	12/15/79	S	1.3	B	5		RC	ZZZZZZ	UNIT WAS HELD AT 75% REACTOR POWER TO RUN A FLUX MAP.
039	12/15/79	S	8.5	B	5		HA	VALVEX	UNIT WAS REDUCED TO 36% REACTOR POWER TO COLLECT VALVE DATA FOR THE TURBINE CONTROL VALVE-MANAGEMENT PROGRAM.
040	12/16/79	S	1.3	B	5		HA	VALVEX	UNIT WAS LIMITED TO 87% REACTOR POWER FOR TURBINE CONTROL VALVE TESTING.

SUMMARY

THE UNIT RETURNED TO SERVICE ON 12/01/79 FOLLOWING RECOVERY FROM AN 11/30/80 TRIP, BUT WAS LIMITED TO 32% REACTOR POWER DUE TO DECREASING CONDENSER VACUUM. AN OUTAGE OCCURRED ON 12/02/79 TO ISOLATE THE 1B STEAM GENERATOR FEEDPUMP FOR REPAIRS. THE UNIT EXPERIENCED NINE MORE LOAD REDUCTIONS DURING THE REPORT PERIOD.

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

Power reductions have been required due to reactor water conductivity problems caused by RWCU filter defects. Reactor thermal power is also restricted to 2 percent less than rated due to CMFLPD limit.

FACILITY ITEMS (PLANS AND PROCEDURES):

Snubber inspection and refueling outage scheduled for March, 1980.

MANAGERIAL ITEMS:

None

PLANT STATUS:

Operating at reduced power. Offgas rate at the SJAE is 3060 microcuries per second. Stack release rate is less than 50 microcuries per second.

LAST IE SITE INSPECTION DATE: 9/21/79

INSPECTION REPORT NO: 79-16

SUMMARY

INSPECTION SUMMARY

Jun 24-29 (79-08): Routine unannounced inspection of the Security Plan, Security Program Audit, Security Organization, Physical Barriers, Lighting, Access Control, Alarm Stations, Detection Aids, Assessment Aids, Communications, Testing and Maintenance, Compensatory Measures, Power Supply, Response, Locks, Keys and Combinations and Records and Reports. The inspection involved 132 inspector hours onsite by three NRC Regional inspectors. The inspection was begun during an offshift period (weekend); 44 inspection hours were performed during offshift periods. Five items of noncompliance were identified (Guards not performing all vital area duties committed to in security plan; metal detectors not operating properly; Vital Area door found unsecured; Secondary Alarm Station not equipped with audible console annunciator; Administrative record of guard responses not detailed).

Sep 10-14 and 17-20 (79-13): Routine, unannounced inspection of the QA Program; Design Change/Modification Program; Design Changes/Modifications; QA/QC Administration; Records Program; Document Control Program; and, the Offsite Support Staff. The inspection involved 71 inspector-hours onsite by two NRC inspectors and 51.5 inspector-hours at the corporate offices. Five items of noncompliance were identified (Failure to submit annual 10 CFR 50.59 report; Implementing a Technical Specification change without prior NRC approval; Failure to store single copy records per N45.2.9; Failure to take corrective action with respect to audit report findings; Failure to have drawings appropriate to the circumstances).

Sep 11-13 (79-15): Routine, unannounced inspection of Facility Organization and Operation, Measurement and Controls, Shipping and Receiving, Storage and Internal Control, Inventory, and Records and Reports. The inspection involved 45 inspector-hours onsite by two NRC inspectors. No items of noncompliance were identified.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-072/ 03L	09/12/79	10/12/79	30 Day LER	Instrument root valve positions were not verified prior to plant startup due to inadequate valve lineup procedures
79-073/ 03L	09/14/79	10/12/79	30 Day LER	Emergency diesel C tripped on overspeed during testing due to loose connection on the switch

MANAGERIAL ITEMS:

NONE

PLANT STATUS:

+ Plant shut down for installation of Helium Circulators and maintenance items.

LAST IE SITE INSPECTION DATE: December 3 - 7, 1979 +

INSPECTION REPORT NO: 50-267/79-20

SUMMARY

INSPECTION SUMMARY

+ Inspection conducted during the period October 29 through November 30, 1979 (79-17): Routine, announced inspection of review of plant operations; audits; physical protection; follow-up on bulletins/circulars; calibrations; and review of event reports. No items of noncompliance or deviations were identified.

Information Meeting with Local Public Officials on October 31, 1979 (79-18): Public officials of Greeley and Platteville, Colorado were apprised of the mission of the NRC. Key NRC personnel, including the Resident Inspector, were introduced. Discussion with the local officials included lines of communication with the NRC, the status of the Fort St. Vrain site and community concerns. The meeting involved 11 hours of NRC participation.

Inspection on November 14 - 16, 1979 and November 28-30, 1979 (79-19): Routine, announced inspection of licensee actions taken in response to IE Bulletin 79-02, Revision 2. The inspection involved thirty-five (35) inspection hours on site by one (1) NRC inspector. No items of noncompliance or deviations were identified in the areas inspected.

Inspection on December 3 - 7, 1979 (79-20): Inspection included a review of Security Plan, the Security Program Audit, Security Organization, Protected Area Physical Barriers, and Lighting; Access Control (Identification, Authorization, and Badging): Access Control (Search) Alarm Stations; Testing and Maintenance; Compensatory Measures; Records and Reports; Follow-up on previous items of noncompliance, deviations, and follow-up on IE Circular 79-16. The inspection involved (38) inspector hours on site by one (1) NRC inspector. The licensee was found to be in compliance with NRC requirements within all the areas examined during this inspection.

NRC POWER RESTRICTIONS: Restricted to 70% of Licensed Thermal Power.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50.54 TITLED "CONDITIONS OF LICENSES" STATES IN PART: "...THE FOLLOWING SHALL BE DEEMED CONDITIONS FOR EVERY LICENSE ISSUED:...(E) THE LICENSE SHALL BE SUBJECT TO...AMENDMENT FOR CAUSE...." CONTRARY TO THE ABOVE, ON 8/24-25/79, THE INSPECTORS OBSERVED THAT THE LICENSEE HAS NOT IMPLEMENTED THE ABOVE REFERENCED MODIFICATIONS. (7916 INFRACTION)

TS 6.8.1 STATES IN PART, THAT: "WRITTEN PROCEDURES SHALL BE ESTABLISHED, IMPLEMENTED & MAINTAINED COVERING... FIRE PROTECTION PROGRAM IMPLEMENTATION". CONTRARY TO THE ABOVE, ON 10/25/79, A WELDING OPERATION AUTHORIZED BY WELDING PERMIT #8002 WAS OBSERVED TO BE CONDUCTED WITHIN 5 FT OF COMBUSTIBLE MATERIALS, WITHOUT THE BENEFIT OF FLAMEPROOF COVERS, & WITHIN 20 FT OF AN UNCOVERED MOVEABLE DRUM OF OIL. (7916 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

+ The plant returned to operation on 12/16 following repair of the B steam generator tube leak.

+ Evaluations into the causes and repair of a linear indication on the pressurizer power operated relief valve yokes are continuing. Licensee NDE examination of replacement yokes received onsite revealed cracks in the new cast steel yokes. The NRC staff is evaluating the latest information for consideration of further action.

FACILITY ITEMS (PLANS AND PROCEDURES):

+ Plant shutdown for the annual refueling and maintenance outage is scheduled for March 15, 1980.

MANAGERIAL ITEMS:

None.

PLANT STATUS:

+ The plant is operating at full rated power.

+ LAST IE SITE INSPECTION DATE: 1/17/80

+ INSPECTION REPORT NO: 80-01

SUMMARY

INSPECTION SUMMARY

+ Jun 26-29, Aug 28-31 & Oct 10-12 (79-10): Investigation conducted by three region based investigators to review concrete test data, structural integrity test reports, tendon surveillance records and quality assurance records. The containment exterior surfaces were examined and a tendon lift off test was witnessed. The investigation involved 131 investigator-hours at the licensee's corporate office and site. No items of noncompliance were identified.

SUMMARY

INSPECTION SUMMARY

♦ Nov 7-8 (79-19): Special, unannounced inspection of the licensee's response to Bulletin 79-19, including: regulatory requirements, procedures, training, audits, records of shipments and onsite observations. The inspection involved 12 hours on site by one NRC region-based inspector. One item of noncompliance was identified (failure to comply with requirements of 10 CFR 71).

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY SECTION 5.6 OF THE ENVIRONMENTAL TECHNICAL SPECIFICATIONS, DETAILED WRITTEN PROCEDURES SHALL BE PREPARED AND FOLLOWED FOR ALL ACTIVITIES INVOLVED IN IMPLEMENTING THE ETS. CONTRARY TO THE ABOVE, THE TEMPERATURE OF THE WEATHER STATION BUILDING WAS GREATER THAN 75 DEGREE F AND THE AIR CONDITIONER WAS NOT FUNCTIONING PROPERLY AS REQUIRED BY PROCEDURE HNP-7900, PARAGRAPH 4.A. IN ADDITION, CONTRARY TO PARAGRAPH 4.J OF THE SAME PROCEDURE, IT WAS OBSERVED THAT DIFFERENCE OF MORE THAN 20 DEGREES EXISTED BETWEEN THE TOP AND BOTTOM WIND DIRECTION INDICATORS AND THE REQUIRED ADDITONAL CHECKS WERE NOT PERFORMED.
(7930 DEFICIENCY)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.1, WRITTEN PROCEDURES SHALL BE ESTABLISHED AND IMPLEMENTED FOR SAFETY RELATED ACTIVITIES. HATCH NUCLEAR PLANT PROCEDURE NO. 314, KEY CONTROL, PARAGRAPH B.3, STATES THAT KEYS FOR KEY OPERATED SWITCHES ON THE CONTROL BOARD ARE TO BE KEPT ON THE KEY BOARD WHEN NOT IN USE, AND SPECIFICALLY STATES KEYS ARE NOT TO BE LEFT IN THE SWITCHES. HATCH NUCLEAR PLANT PROCEDURE NO. 17, RELIEF OF PERSONNEL, PARAGRAPH D.1 STATES THAT THE ONCOMING PLANT OPERATOR IS TO REVIEW ENTRIES MADE IN THE OPERATOR'S LOG AND INITIAL EACH PAGE. IT FURTHER REQUIRES THAT ENTRIES MADE THE PREVIOUS TWO SHIFTS SHOULD BE REVIEWED PRIOR TO ASSUMING SHIFT RESPONSIBILITIES. CONTRARY TO THE ABOVE: 1. ON OCTOBER 4, 1979, THREE KEYS ASSOCIATED WITH THE HIGH PRESSURE COOLANT INJECTION SYSTEM AND TWO KEYS ASSOCIATED WITH THE REACTOR CORE ISOLATION COOLING SYSTEM WERE BEING MAINTAINED IN THEIR RESPECTIVE SWITCHES ON THE CONTROL PANEL ON UNIT 2. 2. THE UNIT 1 PLANT OPERATOR ON OCTOBER 4, 1979 AND THE UNIT 2 PLANT OPERATOR ON OCTOBER 3, 1979, DID NOT INITIAL THE PREVIOUS TWO SHIFT ENTRIES PRIOR TO ASSUMING DAY SHIFT RESPONSIBILITIES. A SIMILAR ITEM OF THE FIRST EXAMPLE WAS BROUGHT TO YOUR ATTENTION IN OUR LETTER DATED AUGUST 3, 1979.
(7932 INFRACTION)

* INSPECTION REPORT NO: 50-321/79-37

SUMMARY

INSPECTION SUMMARY

* INSPECTION OCTOBER 16-19 AND 23 (79-30): THIS ROUTINE UNANNOUNCED INSPECTION INVOLVED 14 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIOLOGICAL ENVIRONMENTAL MONITORING INCLUDING MANAGEMENT CONTROLS, QUALITY CONTROL OF ANALYTICAL MEASUREMENTS, INSPECTION OF ENVIRONMENTAL MONITORING STATIONS AND SAMPLE COLLECTION, REVIEW OF ENVIRONMENTAL MONITORING DATA, REVIEW OF ENVIRONMENTAL PROCEDURES AND THEIR IMPLEMENTATION. OF THE FIVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FOUR AREAS, ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE TO FOLLOW PROCEDURES IN PERFORMING DAILY OBSERVATION CHECKS AT THE METEOROLOGICAL STATION).

INSPECTION OCTOBER 6 - NOVEMBER 9 (79-35): THIS INSPECTION INVOLVED 45 INSPECTOR-HOURS ON SITE OF TECHNICAL SPECIFICATION COMPLIANCE, REPORTABLE OCCURRENCES, HOUSEKEEPING, OPERATOR PERFORMANCE, OVERALL PLANT OPERATIONS, QUALITY ASSURANCE PRACTICES, STATION AND CORPORATE MANAGEMENT PRACTICES, CORRECTIVE AND PREVENTATIVE MAINTENANCE ACTIVITIES, SITE SECURITY PROCEDURES, RADIATION CONTROL ACTIVITIES, AND SURVEILLANCE ACTIVITIES. OF THE ELEVEN AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION NOVEMBER 26-28 (79-36): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 11 INSPECTOR-HOURS ON SITE IN THE AREAS OF ROUTINE MAINTENANCE AND PLANT TOUR. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

HATCH NUCLEAR PLANT PROCEDURE NO. 17, RELIEF OF PERSONNEL, PARAGRAPH D.1 STATES THAT THE ONCOMING PLANT OPERATOR IS TO REVIEW ENTRIES MADE IN THE OPERATOR'S LOG AND INITIAL EACH PAGE. IT FURTHER REQUIRES THAT ENTRIES MADE THE PREVIOUS TWO SHIFTS SHOULD BE REVIEWED PRIOR TO ASSUMING SHIFT RESPONSIBILITIES. CONTRARY TO THE ABOVE: 1. ON OCTOBER 4, 1979, THREE KEYS ASSOCIATED WITH THE HIGH PRESSURE COOLANT INJECTION SYSTEM AND TWO KEYS ASSOCIATED WITH THE REACTOR CORE ISOLATION COOLING SYSTEM WERE BEING MAINTAINED IN THEIR RESPECTIVE SWITCHES ON THE CONTROL PANEL ON UNIT 2. 2. THE UNIT 1 PLANT OPERATOR ON OCTOBER 4, 1979 AND THE UNIT 2 PLANT OPERATOR ON OCTOBER 3, 1979, DID NOT INITIAL THE PREVIOUS TWO SHIFT ENTRIES PRIOR TO ASSUMING DAY SHIFT RESPONSIBILITIES. A SIMILAR ITEM OF THE FIRST EXAMPLE WAS BROUGHT TO YOUR ATTENTION IN OUR LETTER DATED AUGUST 3, 1979.

SUMMARY

INSPECTION SUMMARY

+ INSPECTION OCTOBER 16-19 AND 23 (79-34): THIS ROUTINE UNANNOUNCED INSPECTION INVOLVED 14 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIOLOGICAL ENVIRONMENTAL MONITORING INCLUDING MANAGEMENT CONTROLS, QUALITY CONTROL OF ANALYTICAL MEASUREMENTS, INSPECTION OF ENVIRONMENTAL MONITORING STATIONS AND SAMPLE COLLECTION, REVIEW OF ENVIRONMENTAL MONITORING DATA, REVIEW OF ENVIRONMENTAL PROCEDURES AND THEIR IMPLEMENTATION. OF THE FIVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FOUR AREAS. ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE TO FOLLOW PROCEDURES IN PERFORMING DAILY OBSERVATION CHECKS AT THE METEOROLOGICAL STATION).

INSPECTION REPORT NO: 50-133/79-04+

SUMMARY

INSPECTION SUMMARY

+ Inspection on December 18-20, 1979 (Report No 50-133/79-04) Areas Inspected: Routine, unannounced inspection of operations; design, design changes and modifications; Onsite Review Committee; requalification training; maintenance; followup on LER's, Bulletins and Circulars; and independent inspection. The inspection involved 16 inspector hours onsite by one NRC inspector.

Results: No items of noncompliance or deviations were identified.

LICENSE STATUS

Order issued 5/21/76 requiring Utility to prove seismic qualification before resuming operation of unit after outage of 7/2/76.

LICENSE STATUS

The unit produced electricity to the expiration date (October 31, 1974) of delay granted by the AEC for installation of an ECCS system. The ECCS system was not subsequently installed and the unit was defueled on January 30, 1976.

On February 11, 1980, the NRC requested the utility to show cause as to why the operating authority of the license should not be revoked and why the licensee should not submit a plan within 120 days of this order to decommission the unit.

+ INSPECTION REPORT NO: 79-25

SUMMARY

INSPECTION SUMMARY

+ Jun 20-22 & Jul 23-27 (79-11): Routine, unannounced inspection of the licensee's inservice inspection activities and the eddy current examination of the steam generator tubes. This included review of ISI Program and NDE procedures, observation of work in progress and review of ISI data and eddy current examination data. The inspection involved 59 inspector-hours onsite by one regional based NRC inspector. No items of noncompliance were identified.

+ Jul 17-19 (79-13): Routine, unannounced inspection by regional based inspectors of refueling activities, outage maintenance, integrated leak rate test procedure review, and followup on outstanding items. The inspection involved 67.5 inspector-hours onsite by three NRC regional based inspectors. No items of noncompliance or deviations were identified.

+ Jul 24-27 (79-14): Routine, unannounced inspection by a regional based inspector of radiation protection during refueling including licensee action on IE circulars and previous inspection findings, procedures, advance planning and preparation, training, exposure control, respiratory protection, posting and control, radioactive material control and surveys. Upon arrival, a tour of the radiation control area was conducted to observe radiation safety practices at areas where work was in progress. The inspection involved 29 inspector-hours onsite by one NRC regional based inspector. No items of noncompliance were identified.

+ Aug 1-2 (79-15): Routine, unannounced inspection by two regional based inspectors of licensed reactor operator requalification training, general employee training, craft and technician training, and licensee action on previous inspection findings. The inspection involved 29 inspector-hours onsite by two regional based inspectors. No items of noncompliance were identified.

N/A	12/28/79	S	.0	D	5		HA	TURBIN	LOAD REDUCTION CAUSED BY L.P. TURBINE RESTRICTION.

SUMMARY

THE UNIT WAS RETURNED TO SERVICE ON 12/01/79 FROM AN OUTAGE TO REPLACE CONTROL ROD DRIVE MECHANISM COOLING FAN MOTORS. AN OUTAGE OCCURRED AGAIN FROM 12/02/79 THROUGH 12/07/79 TO DETERMINE THE SOURCE OF EXCESSIVE LEAKAGE INTO THE PRESSURIZER RELIEF TANK. FROM 12/28/79 THROUGH THE END OF THE PERIOD, POWER WAS REDUCED TO 800 MWE AND THE LOW PRESSURE STEAM DUMP SYSTEM WAS PLACED IN SERVICE BECAUSE OF LOW PRESSURE TURBINE DISC CRACKING AT SIMILAR WESTINGHOUSE UNITS. MAXIMUM POWER WILL BE MAINTAINED AT 800 MWE UNTIL THE SCHEDULED TURBINE INSPECTION ON 01/11/80.

+ INSPECTION REPORT NO: 79-29

SUMMARY

INSPECTION SUMMARY

+ Sep 10-14 & 17-20 (79-20): Routine, unannounced inspection of the QA Program; Design Change/Modification Program; Design Changes/Modifications; QA/QC Administration; Records Program; Document Control Program; and, the Offsite Support Staff. The inspection involved 71 inspector-hours onsite by two NRC inspectors and 51.5 inspector-hours at the corporate offices. Three items of noncompliance were identified in three areas (Infraction - implementing a Technical Specification change without prior NRC approval; Infraction - failure to store single copy records per N45.2.9; Infraction - failure to take corrective action with respect to audit report findings).

+ Oct 30-31 (79-24): Special unannounced inspection by two regional based inspectors of the radiation protection program as it relates to steam generator eddy current testing and explosive tube plugging operations including: training; exposure control, respiratory protection, posting and control; surveys; and, plant tour. One item of noncompliance was found in one area (failure to maintain results of surveys).

15	12/10/79	F	2.9	G	3		IA	INSTRU	DURING PERFORMANCE OF A MONTHLY SURVEILLANCE TEST AN ERROR WAS MADE WHICH CAUSED A TURBINE RUNBACK. FROM A 100% ARO CONDITION, INSUFFICIENT ROD WORTH WAS AVAILABLE FAST ENOUGH TO PREVENT OVERTEMPERATURE DELTA T TRIP.

SUMMARY

THE UNIT'S MAXIMUM DEPENDABLE CAPACITY (NET MWE) HAS INCREASED FROM 524 TO 526, AS A RESULT OF THE 12/79 CAPACITY TEST. OPERATION WAS AT NEAR FULL POWER THROUGHOUT THE REPORT PERIOD, WITH A REACTOR TRIP ON 12/10/79 DUE TO PERSONNEL ERROR DURING A MONTHLY SURVEILLANCE TEST. BRIEF REDUCTIONS WERE NECESSARY FOR MAINTENANCE.

MANAGERIAL ITEMS:

+ R. Prince, Radiation Protection Engineer, terminated employment on November 1, 1979. (79-21)

PLANT STATUS

+ Plant is operating routinely.

+LAST IE SITE INSPECTION DATE: October 29 through November 2, 1979

+ INSPECTION REPORT NO: 79-21

INSPECTION SUMMARY

+ Investigation on September 11-12, (79-18): Special, announced investigation of Licensee Event Report 79-16, bypassing of low flow safety circuit during reactor startup on September 7-9, 1979; review of pertinent records, observation of control room conditions, interviews of personnel. The investigation involved 28 inspector hours onsite by two NRC personnel. Of the areas investigated, two items of noncompliance with NRC regulations were observed failure to energize the low flow scram circuit during startup and failure to perform a timely review and corrective action for a previous incident report.

+ Inspection on October 18, (79-20): Annual review meeting for the discussion of the licensee's regulatory performance and areas of NRC concern. The meeting was attended by four NRC personnel and required two hours. No items of noncompliance or deviations were identified.

+ Inspection on October 29 through November 2, (79-21): Routine, unannounced inspection of (1) Environmental Protection Program including: management controls; quality control of analytical measurements; implementation of environmental monitoring program; and (2) Confirmatory Measurements Program including: discussion of results of comparative analyses of previous radiological effluent samples; collection of effluent samples for subsequent comparative analyses. The inspection involved 17 inspector hours onsite by one NRC inspector. No apparent items of noncompliance or deviations were identified.

LAST IE SITE INSPECTION DATE: 12/24/79

INSPECTION REPORT NO: 79-31

SUMMARY

INSPECTION SUMMARY

Sep 2 - Oct 2 (79-23): Routine, onsite, regular and backshift inspection by the resident inspector (32 hours) of the control room, unit enclosure, auxiliary, turbine and intake buildings, and the condensate polishing facility; radiation protection; physical security; fire protection; plant operating records; surveillance testing; calibration; maintenance; core power distribution limits; and reporting to the NRC. Noncompliances: None.

Oct 15 - Nov 30 (79-29): Routine, onsite, regular backshift and weekend inspection by the resident inspector (112 hours) of: the control room, primary containment enclosure, auxiliary, turbine and intake buildings, and the condensate polishing facility; radiation protection; physical security; fire protection, plant operating records; surveillance testing; calibration maintenance; core power distribution limits; and reporting to the NRC. Noncompliances: None.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR PART 50, APPENDIX B, CRITERION II, STATES THAT "THE (QUALITY ASSURANCE) PROGRAM SHALL PROVIDE FOR INDOCTRINATION AND TRAINING OF PERSONNEL PERFORMING ACTIVITIES AFFECTING QUALITY AS NECESSARY TO ASSURE THAT SUITABLE PROFICIENCY IS ACHIEVED AND MAINTAINED." 1 ACD 5.4 "MATERIAL RECEIPT AND CONTROL" ALSO STATES THAT THOSE PERSONNEL WHO PERFORM INSPECTIONS REQUIRED BY THIS DIRECTIVE SHALL BE QUALIFIED BY APPROPRIATE TRAINING AND EXPERIENCE. SUCH QUALIFICATION SHALL BE DOCUMENTED. CONTRARY TO THE ABOVE IT WAS FOUND THAT NO PROGRAM OR RECORDS OF A PRIOR PROGRAM EXIST EITHER AT THE SITE OR AT THE CORPORATE OFFICE WHICH ADDRESS THE AREA OF QUALITY ASSURANCE TRAINING. (7915 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

FACILITY ITEMS(PLANS AND PROCEDURES):

+ On November 12, 1979, the plant reached full recirculation flow with all control rods fully withdrawn from the core at 100% power. The licensee plans to coastdown in power level until the refueling outage in early February. (79-18)

PLANT STATUS

+ The plant continued in the coastdown mode of operation. Power level at the end of the month was 87%.

+LAST IE SITE INSPECTION DATE: November 13-15, 1979

+ INSPECTION REPORT NO: 79-18

SUMMARY

INSPECTION SUMMARY

+ Inspection on September 10-13, 25-26 and October 17, (79-15): Announced special inspection of the licensee's implementation of the Quality Assurance Program in the following areas: QA/QC administration; qualification of personnel; design changes and modifications; records control; receipt storage and handling; tests and experiments; procurement control; document control; onsite review committees; audits; test and measurement equipment; surveillance and calibration; maintenance and housekeeping and cleanliness. The inspection involved 95 inspector hours onsite by three NRC inspectors. Of the 14 areas inspected, no apparent items of noncompliance or deviations were identified in 13 areas, one apparent item of noncompliance was identified in one area (failure to establish a program for quality assurance training).

+ Inspection or Novmeber 13-15, (79-18): Routine, unannounced inspection of nonroutine event followup, IE Bulletin and Circular followup, onsite review committee activities and containment purging. The inspection involved 21 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 20.101(B)(1) REQUIRES THAT THE DOSE TO THE WHOLE BODY OF AN INDIVIDUAL IN A RESTRICTED AREA FROM RADIOACTIVE MATERIAL & OTHER SOURCES OF RADIATION IN THE LICENSEE'S POSSESSION SHALL NOT EXCEED 3 REM DURING ANY CALENDAR QUARTER. CONTRARY TO THIS REQUIREMENT, AN INDIVIDUAL RECEIVED A 3.79 REM DOSE TO THE WHOLE BODY IN RESTRICTED AREA DURING THE 2ND CALENDAR QUARTER OF 1979.
(7920 INFRACTION)

TS 6.11, "RADIATION PROTECTION PROGRAM," REQUIRES THAT PROCEDURES FOR PERSONNEL RADIATION PROTECTION BE PREPARED CONSISTENT WITH THE REQUIREMENTS OF 10 CFR PART 20, AND THAT THEY BE APPROVED, MAINTAINED, AND ADHERED TO FOR ALL OPERATIONS INVOLVING PERSONNEL RADIATION EXPOSURE. 1. CONTRARY TO PROCEDURE RP-1, "ACCESS AND RADIOLOGICAL CONTROLS" SECTION 4.3.3 ON 9/27/79, AN INDIVIDUAL NOT ENGAGED IN A SPECIFIC JOB WAS FOUND RESTING IN THE PRONE POSITION ON THE 261' ELEVATION OF THE REACTOR BUILDING. 2. CONTRARY TO PROCEDURE RP-2, "RADIATION WORK PERMIT", SECTION 4.4.1 AN INDIVIDUAL NOT QUALIFIED IN RADIATION PROTECTION WAS PERMITTED TO ACT AS "LEADMAN" ON 4 RWP. CONTRARY TO SECTION 4.7 AN INDIVIDUAL WAS PERMITTED TO EXCEED HIS AUTHORIZED EXPOSURE AND CONTRARY TO SECTION 5.4, INDIVIDUALS FAILED TO ADHERE TO PROTECTIVE MEASURES SPECIFIED IN 14 RWP. 3. CONTRARY TO "RADIATION PROTECTION PROCEDURE" SECTION III.F.3.1.B.1, LAUNDRY WAS FOUND CONTAMINATED IN EXCESS OF LICENSEE LIMITS.
(7920 INFRACTION)

AN INDIVIDUAL WORKED IN THE DRYWELL, A RESTRICTED AREA, DURING THE SECOND CALENDAR QUARTER OF 1979, AND WAS NOT INSTRUCTED IN THE HEALTH PROTECTION PROBLEMS ASSOCIATED WITH EXPOSURE TO RADIOACTIVE MATERIALS OR RADIATION; NOR WAS THE INDIVIDUAL INSTRUCTED IN THE PRECAUTIONS OR PROCEDURES TO MINIMIZE EXPOSURE OR TO OBSERVE WITHIN HIS CONTROL, THE APPLICABLE PROVISIONS OF COMMISSION REGULATIONS AND LICENSES FOR THE PROTECTION OF PERSONNEL FROM EXPOSURE TO RADIATION OR RADIOACTIVE MATERIALS.
(7920 INFRACTION)

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.1.C, WRITTEN PROCEDURES SHALL BE ESTABLISHED IMPLEMENTED AND MAINTAINED COVERING SURVEILLANCE AND TEST ACTIVITIES OF SAFETY RELATED EQUIPMENT. TECHNICAL SPECIFICATION 4.0.5.A.2 REQUIRES INSERVICE TESTING OF ASME CODE CLASS 1, 2 AND 3 VALVES IN ACCORDANCE WITH SECTION XI OF THE ASME BOILER AND PRESSURE VESSEL CODE. SUBSECTION IWV 3400 OF THE ASME BOILER AND PRESSURE VESSEL CODE, SECTION XI REQUIRES CATEGORY A AND B VALVES BE CYCLED EVERY THREE MONTHS TO INSURE OPERABILITY. CONTRARY TO THE ABOVE, CATEGORY A VALVES MOV-RS-100A AND MOV-RS-100B, BOTH SAFETY RELATED COMPONENTS, ARE NOT REQUIRED TO BE CYCLED EVERY THREE MONTHS BY ANY PROCEDURE.
(7941 INFRACTION)

AS REQUIRED BY UNIT 1 TECHNICAL SPECIFICATION TABLE 3.3-3, ITEM 1.E, THREE STEAM PRESSURE CHANNELS PER OPERATING LOOP ARE REQUIRED TO BE OPERABLE IN MODES 1,2 AND 3 EXCEPT AS PERMITTED BY ACTION STATEMENT 14. ACTION STATEMENT 14 STATES THAT WITH THE NUMBER OF OPERABLE CHANNELS ONE LESS THAN THE TOTAL NUMBER OF CHANNELS, OPERATION MAY PROCEED UNTIL PERFORMANCE OF THE NEXT REQUIRED CHANNEL FUNCTIONAL TEST (MONTHLY), PROVIDED THE INOPERABLE CHANNEL IS PLACED IN THE TRIPPED CONDTION WITHIN ONE HOUR. CONTRARY TO THE ABOVE, MAIN STEAM PRESSURE TRANSMITTERS FOR LOOP A, CHANNEL IV (PT-1476) AND LOOP C, CHANNEL IV (PT-1497) WERE INOPERABLE THROUGHOUT THE FIRST CYCLE OF UNIT 1 BECAUSE THEIR SENSING LINES HAD BEEN SWAPPED. THIS WAS APPARENTLY DONE DURING A CUTTING AND REWELDING PROCESS UNDER THE REWORK CONTROL PROGRAM (RCF I-350) IN JULY, 1977.
(7945 INFRACTION)

AS REQUIRED BY UNIT 1 TECHNICAL SPECIFICATION 6.10.2.M, RECORDS OF TRAINING AND QUALIFICATION FOR CURRENT PLANT STAFF MEMBERS ARE TO BE MAINTAINED AS LIFETIME RECORDS. THE NUCLEAR POWER STATION QUALITY ASSURANCE MANUAL SECTION 17 AND SECTION 17.2.14 OF VEPCO'S TOPICAL REPORT - QUALITY ASSURANCE PROGRAM - OPERATIONS PHASE (VEP-1-3A) COMMIT TO RETENTION OF SUCH RECORDS IN ACCORDANCE WITH ANSI N45.2-9, 1974. THIS DOCUMENT REQUIRES A SPECIAL STORAGE REPOSITORY OR DUPLICATE RECORDS SYSTEMS. CONTRARY TO THE ABOVE, RECORDS OF TRAINING RECEIVED BY MECHANICAL AND ELECTRICAL MAINTENANCE EMPLOYEES AS PART OF THE MECHANIC DEVELOPMENT PROGRAMS ARE NOT MAINTAINED AS REQUIRED. THESE RECORDS ARE NOT RETAINED AT THE PLANT SITE AND APPARENTLY ONE COPY IS MAINTAINED IN THE VEPCO CORPORATE OFFICES.
(7945 DEFICIENCY)

AS REQUIRED BY CRITERION V OF APPENDIX B TO 10 CFR 50 IMPLEMENTED BY VEPCO TOPICAL REPORT VEP-1-A SECTION 17, PARAGRAPH 17.2.5 SPECIFIES IN PART, THAT ACTIVITIES AFFECTING QUALITY ARE ACCOMPLISHED IN ACCORDANCE WITH INSTRUCTIONS, PROCEDURES, AND DRAWINGS. GENERAL WELDING PROCEDURE W-1.0 REV. 1 INVOKES ASME SECTION IX (74 W76) WHICH, UNDER PARAGRAPH QW-2013, REQUIRES THAT EACH WELDING PROCESS OR PROCEDURE BE QUALIFIED EITHER SEPARATELY OR IN COMBINATION WITH OTHER PROCESSES OR PROCEDURES...FOR THE DEPOSITED WELD METAL THICKNESS RANGE FOR EACH OF THE PROCESSES OR PROCEDURES...PARAGRAPH QW-351 OF THE SAME CODE REQUIRES THAT THE LIMIT OF THICKNESS FOR WHICH A WELDER IS QUALIFIED IS DEPENDENT UPON THE THICKNESS OF THE WELD HE DEPOSITS WITH EACH WELDING PROCESS. CONTRARY TO THE ABOVE, ON NOVEMBER 16, 1979, PROCEDURE QUALIFICATION RECORDS OF WELD PROCESS SPECIFICATIONS AND WELDER PERFORMANCE QUALIFICATIONS INVOLVING COMBINATION PROCESSES DID NOT INDICATE THE WELD METAL THICKNESS DEPOSITED WITH EACH WELDING PROCESS.
(7947 INFRACTION)

AS REQUIRED BY CRITERION XVII OF APPENDIX B TO 10 CFR 50, AND IMPLEMENTED BY VEPCO TOPICAL REPORT VEP-1-A, SECTION 17 PARAGRAPH 17.2.17 SPECIFIES IN PART THE QUALITY ASSURANCE RECORDS RELATING TO ACTIVITIES AFFECTING QUALITY SHALL BE MAINTAINED AS DOCUMENTARY EVIDENCE OF WORK PERFORMANCE. PARAGRAPH(S) I-2120, I-2130, OF ASME SECTION XI (74, S75) REQUIRES THAT ULTRASONIC EQUIPMENT BE STANDARDIZED FOR SCREEN HEIGHT AND AMPLITUDE CONTROL LINEARITY. CONTRARY TO THE ABOVE, ON NOVEMBER 16, 1979, THERE WAS NO DOCUMENTARY EVIDENCE TO VERIFY THAT CODE REQUIRED STANDARDIZATIONS WERE BEING PERFORMED ON LICENSEE OWNED ULTRASONIC INSTRUMENTS USED FOR VOLUMETRIC EXAMINATIONS.
(7947 DEFICIENCY)

PLANT STATUS:

UNIT 1 SHUTDOWN ON SEPTEMBER 25, 1979 FOR THE PRESENT REFUELING MAINTENANCE OUTAGE. OUTAGE IS EXPECTED TO LAST A MINIMUM OF 90 DAYS.

* LAST IE SITE INSPECTION DATE: DECEMBER 21, 1979

* INSPECTION REPORT NO: 50-338/79-49

SUMMARY

INSPECTION SUMMARY

* INSPECTION OCTOBER 22-26 (79-41): THIS ROUTINE UNANNOUNCED INSPECTION INVOLVED 56 INSPECTOR-HOURS ON SITE IN THE AREAS OF REFUELING ACTIVITIES, LICENSEE EVENT REPORTS, AND FOLLOWUP ON PREVIOUSLY IDENTIFIED ITEMS. OF THE THREE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO IMPLEMENT PROCEDURES TO CONDUCT REQUIRED SURVEILLANCE ON TWO VALVES).

INSPECTION OCTOBER 30 - NOVEMBER 1 (79-43): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 24 INSPECTOR-HOURS ON SITE IN THE AREAS OF INSERVICE INSPECTION ACTIVITY AND IE BULLETIN 79-17. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION OCTOBER 9 - NOVEMBER 2 (79-45): THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED 37 HOURS ON SITE IN THE AREAS OF LICENSEE EVENT REPORTS, MAINTENANCE PROCEDURES AND ACTIVITIES, PREVIOUSLY IDENTIFIED OPEN AND UNRESOLVED ITEMS, AND PLANT TOURS. WITHIN THE FOUR AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS. TWO APPARENT ITEMS OF NONCOMPLIANCE WERE IDENTIFIED IN TWO AREAS (INFRACTION - FAILURE TO OPERATE WITHIN THE LIMITING CONDITION FOR OPERATION FOR MAIN STEAM CHANNELS FOR LOOPS A AND C; DEFICIENCY - FAILURE TO MAINTAIN MECHANICAL AND ELECTRICAL MAINTENANCE TRAINING RECORDS IN ACCORDANCE WITH REQUIREMENTS).

INSPECTION NOVEMBER 13-16 (79-46): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED NINE INSPECTOR-HOURS ON SITE IN THE AREAS OF PREVIOUS INSPECTION

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 50, APPENDIX B III, A QUALITY ASSURANCE PROGRAM MUST INCLUDE PROCEDURES TO ASSURE CHANGES IN FACILITY DESIGN ARE REVIEWED BY A DESIGNATED ORGANIZATION. STATION DIRECTIVE 4.4.2. "PROCESSING NUCLEAR STATION MODIFICATIONS" (4/25/79). IMPLEMENTING THIS REQUIREMENT, REQUIRES ALL MODIFICATIONS OF STATION SYSTEMS BE REVIEWED AND IMPLEMENTED IN ACCORDANCE WITH PROCEDURES REFERENCED IN SECTION 6 OF THE STATION DIRECTIVE. THE FINAL SAFETY ANALYSIS REPORT (FSAR), FIGURE 9-3 SHOWS STEAM GENERATOR SAMPLE LINES BEING DRAINED TO THE LIQUID WASTE SYSTEM. FSAR SECTION 11.1.2.2 STATES LOW RADIOACTIVITY LIQUIDS ARE ROUTED TO THE LOC ACTIVITY WASTE TANK. FSAR SECTION 1A.70, DESIGN CRITERIA FOR CONTROL OF RELEASES OF RADIOACTIVITY TO THE ENVIRONMENT, STATES LIQUID WASTES WILL BE MONITORED FOR ACTIVITY LEVEL AT ALL TIMES DURING RELEASE. CONTRARY TO THE ABOVE, ON NOVEMBER 10 AND 11, 1979, RADIOACTIVITY CONTAMINATED LIQUIDS FROM THE STEAM GENERATORS WERE DISCHARGED TO THE LIQUID WASTE SYSTEM. THIS EFFLUENT PATH WAS NOT PROVIDED WITH A RADIATION MONITOR DURING THE RELEASE. THIS CHANGE WAS MADE WITHOUT THE REQUIRED EVALUATION.
(7933 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 3.9.3, THE RATE OF RELEASE OF RADIOACTIVE MATERIALS IN LIQUID WASTE FROM THE STATION SHALL BE CONTROLLED SUCH THAT THE INSTANTANEOUS CONCENTRATIONS OF RADIOACTIVITY IN LIQUID WASTE UPON RELEASE FROM THE RESTRICTED AREA, DOES NOT EXCEED THE VALUES LISTED IN 10 CFR 20, APPENDIX B, TABLE II, COLUMN 2. 10 CFR 20.3(14) DEFINES A RESTRICTED AREA AS ANY AREA ACCESS TO WHICH IS CONTROLLED FOR PURPOSES OF PROTECTION OF INDIVIDUALS FROM EXPOSURE TO RADIATION AND RADIOACTIVE MATERIALS. CONTRARY TO THE ABOVE, ON NOVEMBER 10 AND 11, 1979, 176 GALLONS OF WATER WITH A CONCENTRATION OF RADIOACTIVITY TOTALING 3.45 TIMES THE VALUES LISTED IN 10 CFR 20; APPENDIX B, APPENDIX B, TABLE II, COLUMN 2, WERE RELEASED TO THE SITE SEWAGE TREATMENT SUMP. THERE ARE NO CONTROLS OVER THE ACCESS OF INDIVIDUALS IN THIS AREA.
(7933 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.4.1.M, THE RADIOACTIVE WASTE MANAGEMENT SYSTEM SHALL BE OPERATED IN ACCORDANCE WITH APPROVED PROCEDURES STATION DIRECTIVE 3.8.21, "RADIOACTIVE WASTE DISPOSAL" (6/8/79), SECTION 4.1.1 STATES ALL RADIOACTIVE LIQUIDS MUST BE DISPOSED OF ONLY IN SINKS AND DRAINS THAT GO TO THE LIQUID WASTE DISPOSAL SYSTEM. CONTRARY TO THE ABOVE, ON NOVEMBER 10 AND 11, 1979, 176 GALLONS OF RADIOACTIVITY CONTAMINATED WATER FROM THE A AND B STEAM GENERATORS WAS DRAINED TO THE SEWAGE TREATMENT SYSTEM.

SUMMARY

INSPECTION SUMMARY

- INSPECTION OCTOBER 29 - NOVEMBER 2 (79-30): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 30 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIOLOGICAL ENVIRONMENTAL MONITORING PROGRAM INCLUDING MANAGEMENT CONTROL, QUALITY CONTROL OF ANALYTICAL MEASUREMENTS, INSPECTION OF ENVIRONMENTAL MONITORING STATIONS, REVIEW OF ENVIRONMENTAL MONITORING DATA, REVIEW OF RADIOLOGICAL ENVIRONMENTAL MONITORING PROCEDURES AND IMPLEMENTATION OF THE MONITORING PROGRAM. OF THE SIX AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION NOVEMBER 19-21 (79-32): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 18 INSPECTOR-HOURS ON SITE IN THE AREA OF PREVIOUSLY IDENTIFIED QUALITY ASSURANCE ITEMS. OF THE ONE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION OCTOBER 15-16 (79-33): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED 17 INSPECTOR-HOURS ON SITE REVIEWING THE DRAINING OF CONTAMINATED LIQUIDS TO THE SEWAGE TREATMENT SYSTEM USING A TEMPORARY DRAIN LINE. THREE APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN THIS AREA (INFRACTION - RADIOACTIVE LIQUID RELEASE IN EXCESS OF TECHNICAL SPECIFICATION LIMITS; INFRACTION - FAILURE TO FOLLOW LIQUID WASTE PROCEDURES; INFRACTION - FAILURE TO REVIEW MODIFICATION OF STEAM GENERATOR SAMPLE LINE DRAIN).

INSPECTION NOVEMBER 30, AND DECEMBER 1 (79-34): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 29 INSPECTOR-HOURS ON SITE IN THE AREA OF EMERGENCY DRILLS. OF THE ONE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 3.8.1.G REQUIRES A CHECK OF PRIMARY COOLANT SYSTEM BORON CONCENTRATION EACH SHIFT WHEN REFUELING OPERATIONS ARE BEING PERFORMED IN THE REACTOR. CONTRARY TO THE ABOVE, THE LICENSEE FAILED TO CHECK PRIMARY COOLANT SYSTEM BORON CONCENTRATION DURING THE "A" SHIFT ON OCTOBER 2, 1979, A SHIFT DURING WHICH REFUELING OPERATIONS WERE BEING PERFORMED IN THE REACTOR.
(7917 INFRACTION)

TECHNICAL SPECIFICATION 6.8.1.B REQUIRES IMPLEMENTATION OF PROCEDURES COVERING REFUELING OPERATIONS. PROCEDURE FHSO-2 "REFUELING PROCEDURE" INCLUDES CHECKLIST CL A5.14-2 "REFUELING OPERATIONS SHIFT CHECK SHEET," WHICH STATES, IN PART: "THE MINIMUM SPENT FUEL POOL/REACTOR CAVITY LEVEL IS ONE FOOT BELOW THE SURFACE SKIMMERS DURING FUEL HANDLING". CONTRARY TO THE ABOVE, THE LICENSEE HANDLED FUEL ON THE "A" SHIFTS OF OCTOBER 11 AND 12, 1979, WHEN THE WATER LEVEL WAS 1.5 AND 2 FEET, RESPECTIVELY, BELOW THE SKIMMERS.
(7917 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS

+ Reactor shutdown on September 18, 1979, to begin a 10-week scheduled refueling and maintenance outage. Start-up tentatively scheduled for late January 1980.

+LAST IE SITE INSPECTION DATE: October 1979

+ INSPECTION REPORT NO: 79-17

SUMMARY

INSPECTION SUMMARY

+ Inspection during October, (79-17): Routine resident inspection program for October 1979, including records; review and audit; maintenance; and refueling preparations and activities. The inspection involved 90 inspector hours onsite. Of the four areas examined, no items of noncompliance or deviations were identified in three areas. Two items of noncompliance (missing required chemistry sampling; and violated procedural limit on refueling water level) were identified in the remaining area.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50.55A(G)(4), AS OF 8/31/79, SEVERAL SURVEILLANCE TEST PROCEDURES DID NOT CONFORM TO SECTION XI OF THE ASME B&PV CODE. DETAILS ARE AS FOLLOWS: THE HIGH PRESSURE COOLANT INJECTION & REACTOR CORE ISOLATION COOLING PUMPS HAVE VARIABLE SPEED DRIVES & SURVEILLANCE TEST PROCEDURES ST-6.5 & 6.11 DO NOT ESTABLISH A REFERENCE SPEED AS REQUIRED BY IWP-3100.
(7919 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- Seismic supports for 1 inch CRD insert and withdrawal piping were found to have safety factors for seismic qualification less than required.

FACILITY ITEMS (PLANS AND PROCEDURES):

- An emergency drill involving site evacuation and notification of state, county and local government agencies was conducted on December 16.

MANAGERIAL ITEMS:

PLANT STATUS:

- The reactor operated at a nominal 100 percent power during the month. Representative offgas and combined Unit 2 and Unit 3 stack gas release rates were 8,190 microcuries per second and 959 microcuries per second, respectively. The unit was shutdown on December 31 for repair of a core spray full flow test valve and to implement short term "lessons learned" commitments.

- LAST IE SITE INSPECTION DATE: 12/31/79

- INSPECTION REPORT NO: 79-30

SUMMARY

INSPECTION SUMMARY

- Sep 24-26, & 28 (79-24): Routine, unannounced inspection by one region-based inspector (10 hours onsite) of work activities related to concrete expansion bolt anchors in pipe support base plates under Bulletin 79-02. Noncompliances: None.

- Oct 30 - Nov 1 (79-27): Routine, unannounced inspection by two NRC region-based inspectors (18 hours onsite) of the licensee's response to IE Bulletin 79-19 including maintenance of regulatory requirements, training, audits, procedures and package compliance. Noncompliances: two (failure to adhere to procedures and failure to maintain current procedures at the work location).

- Nov 13-21 (79-28): Routine, unannounced inspection by a region-based inspector (11 hours onsite, 4 hours at corporate offices, 3 hours at maintenance shops) of general employee training, craft personnel training and licensed operator requalification training. Noncompliances: One (failure of operators to review, and/or document review, contents of all abnormal and emergency procedures).

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50.55A(G)(4) AS OF 8/31/79 SEVERAL SURVEILLANCE TEST PROCEDURES DID NOT CONFORM TO SECTION XI OF THE ASME B&PV CODE. (7921 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

+ Seismic supports for 1 inch CRD insert and withdrawal piping were found with less than required safety factors for seismic qualification.

+ Unit 3 Tip System shear valves in the Tip Guide Tube Assemblies were installed during initial construction which reversed the positions of the shear and ball valves. Ball valves were qualified in both directions and have been leak checked as a result of this event.

FACILITY ITEMS (PLANS AND PROCEDURES):

+ An emergency drill involving site evacuation including notification of state, county, and local government agencies was conducted on December 16, 1979.

MANAGERIAL ITEMS:

PLANT STATUS:

+ The reactor was operated at a nominal 100 percent power during the month. Routine maintenance and repair on an "A" steam line isolation valve was performed in a scheduled outage December 7-12. One unplanned shutdown occurred on December 14 when the reactor was manually shutdown following a temporary loss of power to certain instrumentation. Representative offgas and combined Unit 2 and Unit 3 stack release rates were 3540 microcuries per second and 959 microcuries per second, respectively.

+ LAST IE SITE INSPECTION DATE: 12/31/79

+ INSPECTION REPORT NO: 79-33

SUMMARY

INSPECTION SUMMARY

+ Sep 24-25, & 28 (79-26): Routine, unannounced inspection by one region-based inspector (10 hours onsite) of work on concrete expansion bolt anchors in pipe support base plates under Bulletin 79-02. Noncompliances: One (failure to initiate corrective action on an identified nonconformance).

+ Oct 16-19 (79-29): Routine, unannounced inspection by a region-based inspector (27 hours onsite) of the inservice inspection program and related nondestructive examination activities, and the documentation associated with capping of the control rod drive hydraulic return line nozzle. Noncompliances: None.

+ Oct 30 - Nov 1 (79-30): Routine, unannounced inspection by two NRC region-based inspectors (18 hours onsite) of the licensee's response to IE Bulletin 79-19 including maintenance of regulatory requirements, training, audits, procedures and package compliance. Noncompliances: Two (failure to adhere to procedures, and failure to maintain current procedures at the work location).

+ Nov 13-21 (79-31): Routine, unannounced inspection by a region-based inspector (11 hours onsite, 3 hours at maintenance ships, 4 hours at corporate offices) of general employee training, craft personnel training and licensed operator requalification training. Noncompliances: One (failure of operators to review, and/or document review, contents of all abnormal and emergency procedures).

LAST IE SITE INSPECTION DATE: 12/03-19/79+

INSPECTION REPORT NO. 50-312/79-28+

SUMMARY

INSPECTION SUMMARY

Inspection on July 24 - August 2, 1979 (Report No. 50-312/79-17)
Report being prepared; to be reported next month.

+ Inspection on October 29 - November 1, 1979 (Report No. 50-312/79-22)
Areas Inspected: Routine, unannounced inspection of personnel qualification program; design changes and modification program; test and experiments program; and independent inspection effort. The inspection involved 26 inspector hours onsite by one NRC inspector.

Results: Of the four areas inspected, no items of noncompliance or deviations were found in two areas. Three items of noncompliance were identified in two areas (Infraction - Failure to review temporary changes to procedures within seven days; Deficiency - Failure to audit qualifications of plant operating staff; Infraction - Failure to have temporary changes in procedures approved by two members of the plant management staff.

+ Inspection on November 21, 1979 (Report No. 50-312/79-24)
Report being prepared; to be reported next month.

+ Inspection on November 1-30, 1979 (Report No. 50-312/79-25)
Areas Inspected: Routine inspections of plant operations; physical security; training; requalification training; plant incidents; LER followup and reporting; review and audit; followup on inspector identified items; and independent inspection effort. The inspection involved 85 inspector hours onsite by the NRC Resident Inspector.

Results: No items of noncompliance were identified in seven areas. Two items of noncompliance were identified in two areas (plant incidents and LER followup and reporting).

+ Inspection on December 10-14, 1979 (Report No. 50-312/79-26)
Areas Inspected: Routine, unannounced inspection of the completion of selected fire protection modifications; surveillance of pipe support and restraint systems; followup on IE Bulletins and Circulars and audit of health physics and respirator training. The inspection involved 37 inspector hours onsite by one NRC inspector.

Results: No items of noncompliance or deviations were identified.

+ Inspection on December 10-14, 1979 (Report No. 50-312/79-27)
Areas Inspected: Security organization; physical barriers (protected area); physical barriers (vital areas); lighting; access control (identification, authorization and badging); access control (search); access control (escorting); access control (vital areas); alarm stations; detection aids; assessment aids; communications; testing and maintenance; compensatory measures; response; locks, keys and combinations; and records and reports. The inspection involved 212 inspector hours onsite by three NRC inspectors.

Results: No items of noncompliance or deviations were identified.

+ Inspection on December 3-19, 1979 (Report No. 50-312/79-28)
Report being prepared; to be reported next month.

NRC POWER RESTRICTIONS: None

SUMMARY

INSPECTION SUMMARY

INSPECTION NOVEMBER 13-14 (79-25): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 26 INSPECTOR-HOURS ON SITE IN THE AREAS OF SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS (IE BULLETIN 79-14). WITHIN THE AREA INSPECTED, TWO ITEMS OF NONCOMPLIANCE WERE FOUND (DEFICIENCY - INADEQUATE QA RECORDS TO IEB 79-14; INFRACTION - FAILURE TO IDENTIFY ALL PIPE SUPPORTS AND RESTRAINTS AS SPECIFIED IN IEB 79-14).

INSPECTION NOVEMBER 13-16 (79-26): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 22 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIOLOGICAL ENVIRONMENTAL MONITORING PROGRAM INCLUDING: MANAGEMENT CONTROLS, INSPECTION OF ENVIRONMENTAL MONITORING STATIONS, REVIEW OF LICENSEE AUDIT RESULTS, REVIEW OF ANNUAL ENVIRONMENTAL REPORT, REVIEW OF RADIOLOGICAL ENVIRONMENTAL MONITORING PROCEDURES, AND IMPLEMENTATION OF THE MONITORING PROGRAM. OF THE SIX AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

NRC POWER RESTRICTIONS: NONE;

INSPECTION STATUS

ENFORCEMENT STATUS

THE 16.5 DEGREE F MAXIMUM T ACROSS THE CONDENSER WAS EXCEEDED DURING NORMAL OPERATION WITH ALL CIRCULATING WATER PUMPS OPERATING ON SEVERAL OCCASIONS INCLUDING 1/4, 5, 23 & 25; 2/5-6 & 3/4/79. THE 27.5 DEGREE F INSTANTANEOUS MAXIMUM T ACROSS THE CONDENSER WAS EXCEEDED ON 1/18 & 25/79. SECTION 2.1.1 OF APP B, ETS FOR SALEM GENERATING STATION UNIT 1.
(7929 INFRACTION)

RECORDS OF PLANT THERMAL MONITORING REQUIRED BY SECTION 2.1 OF THE ETS WERE NOT MADE & RETAINED FOR THE PERIOD FROM 0900 THRU 2400 HRS ON 1/13/79. SECTION 5.7.1 OF APP B, ETS.
(7929 DEFICIENCY)

ON SEVERAL OCCASIONS, INCLUDING THOSE INSTANCES INDICATED IN ITEM A OF THIS APP, THE EXCEEDING OF THE CONDENSER T LIMITING CONDITION FOR OPERATION INCLUDING THOSE OF 1/4, 5, 23 & 25; 2/5-6 & 3/4/79 WERE NOT REPORT AS REQUIRED. SECTION 5.6.2 OF APP B, ETS.
(7929 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- None

FACILITY ITEMS (PLANS AND PROCEDURES):

- The licensee is completing seismic reanalysis per IEB 79-07 and making support modifications as necessary.

MANAGERIAL ITEMS:

None

PLANT STATUS:

- Unit resumed operation at the end of December.
- LAST IE SITE INSPECTION DATE: 01/22/80
- INSPECTION REPORT NO: 79-33

SUMMARY

INSPECTION SUMMARY

- Oct 7 - Nov 17 (79-28): Routine inspections of plant operations including: tours of the facility; log and record reviews, review of licensee events; followup on IE Bulletins and Immediate Action Letters; and followup on previous inspection items. The inspections involved 75 onsite hours by the resident NRC inspector. One item of noncompliance and one deviation were identified (failure to follow procedures relative to valve status; failure to complete seismic support modifications prior to Mode 4 operation).
- Oct 31 - Nov 1-2 (79-30): Routine unannounced inspection of inservice inspection data package and licensee action on previous inspection findings. The inspection involved 24 hours onsite by one NRC region-based inspector. No noncompliances were identified.

LAST IE SITE INSPECTION DATE: 12/10-13/79+

INSPECTION REPORT NO: 50-206/79-17+

SUMMARY

INSPECTION SUMMARY

+ Inspection on October 15-19 & 30 & November 2, 1979 (Report No. 50-206/79-15)
Areas Inspected: Routine, unannounced inspection of the radioactive waste handling program, including review of release records, methods and procedures for treatment of solid, liquid and gaseous radioactive waste; examination of effluent monitoring systems and sampling methods; and collection of confirmatory measurement samples. The inspector investigated the licensee action to date in response to IE Bulletin 79-19 and two Licensee Event Reports (LER 79-11 and 12) related to environmental monitoring. The status of emergency response planning was discussed and an emergency drill was observed. The inspection involved a total of 53 hours onsite by one NRC inspector.

Results: No items of noncompliance or deviations were identified.

+ Inspection on November 1-2 & 26, 1979 (Report No. 50-206/79-16)
Areas Inspected: Routine, announced inspection of scope and methods of field inspection for IE Bulletin 79-14; routine, unannounced inspection of repair of shorted electrical buswork from the November 7, 1979 reportable occurrence; discussions of this event, of the proposed licensee design change 79-20, and of the recent reportable occurrences (LER 79-18 and 79-19) involving missing pipe supports. The inspection involved 47 inspector hours by three NRC inspectors.

Results: No items of noncompliance or deviations were identified.

+ Inspection on December 10-13, 1979 (Report No. 50-206/79-17)
Areas Inspected: Routine, unannounced inspection of quality assurance program; onsite review; procedures; plant operations; plant tour;

NRC POWER RESTRICTIONS: NONE

     SUMMARY

     INSPECTION SUMMARY

*    INSPECTION NOVEMBER 26-28 (79-30):  THIS ROUTINE, UNANNOUNCED INSPECTION
     INVOLVED 21 INSPECTOR-HOURS ON SITE IN THE AREAS OF LICENSEE ACTION ON
     PREVIOUSLY IDENTIFIED QUALITY ASSURANCE ITEMS AND QA PROCUREMENT.  OF
     THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE
     IDENTIFIED.

     INSPECTION NOVEMBER 14-16 (79-31):  THIS SPECIAL, UNANNOUNCED INSPECTION
     INVOLVED 13 INSPECTOR-HOURS ON SITE IN THE AREA OF PIPE SUPPORT BASE
     PLATE DESIGNS USING CONCRETE EXPANSION ANCHOR BOLTS (IE BULLETIN 79-02).
     NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

     INSPECTION NOVEMBER 27-30 (79-34):  THIS ROUTINE UNANNOUNCED INSPECTION
     INVOLVED 24 INSPECTOR-HOURS ON SITE IN THE AREAS OF REACTOR COOLANT LOOP
     PIPING WELDING ACTIVITIES, WELDING MATERIAL CONTROL AND WELDER QUALIFICA-
     TION (UNIT 2); FOLLOWUP INSPECTION OF AN UNRESOLVED ITEM, ITEM OF NONCOM-
     PLIANCE AND AN INSPECTOR FOLLOWUP ITEM (UNIT 2); FOLLOWUP OF IE BULLETIN
     79-13 (UNIT 1).  OF THE FOUR AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE
     OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 3.1.B, THE REACTOR COOLANT SYSTEM (RCS) COOLDOWN RATE SHALL NOT EXCEED 50 DEGREES F PER HOUR FOR TEMPERATURES BELOW 440 DEGREES F. CONTRARY TO THE ABOVE, ON OCTOBER 5, 1978, THE RCS COOLDOWN RATE, AS MEASURED BY THE WIDE RANGE HOT LEG TEMPERATURE RECORDER TR-1-413, EXCEEDED THE LIMIT BY SOME 10 DEGREES F FOR THE FOLLOWING ONE HOUR PERIODS 3:30 P.M. TO 4:30 P.M., 390 DEGREES F TO 330 DEGREES F AND 7 P.M. TO 8 P.M., 260 DEGREES F TO 200 DEGREES F.
(7962 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 3.7, TABLE 3.7-5, ITEM 2, THE COMPONENT COOLING WATER RADIATION MONITORS RM-CC-105 AND -106 SHALL BE SET TO ALARM AT TWICE BACKGROUND OR LESS. CONTRARY TO THE ABOVE, ON OCTOBER 29, 1979, RM-CC-105 AND RM-CC-106 RADIATION MONITORS WERE SET TO ALARM AT APPROXIMATELY TEN TIMES BACKGROUND DUE TO THE DECREASE IN ACTIVITY IN THE COMPONENT COOLING WATER; THE ALARM SETPOINT WAS NOT REDUCED AS THE BACKGROUND DECREASED.
(7962 INFRACTION)

AS REQUIRED BY TS 6.4.0, THE DETAILED WRITTEN PROCEDURES FOR ACTIONS TO BE TAKEN FOR SPECIFIC AND UNFORESEEN MALFUNCTIONS OF SYSTEMS OR COMPONENTS, INCLUDING ALARMS, SHALL BE FOLLOWED. CONTRARY TO THE ABOVE, ON OCTOBER 17, 1979, ANNUNCIATOR ALARM PROCEDURE 18-26 (D-2) "RECIRCULATION SPRAY PIT B HIGH LEVEL" WAS NOT FOLLOWED AFTER THE INSPECTOR VERIFIED EXCESSIVE WATER (OVER 14 INCHES) IN THE SAFEGUARDS VALVE SUMP END PIT AND THE ALARMED ANNUNCIATOR D-2 ON THE UNIT 1 CONTROL ROOM PANEL B. ALTHOUGH THE ALARM HAD BEEN ANNUNCIATED FOR SEVERAL DAYS AND NOT DOCUMENTED, OPERATOR ACTION TO VERIFY THE WATER LEVELS, THE SOURCE OF THE WATER, THE PROPER OPERATION OF THE DRAIN AND SUMP PUMPS, AND TO REMOVE THE WATER WAS NOT TAKEN.
(7962 INFRACTION)

TABLE E-3 IN PART IV OF THE SURRY FIRE PROTECTION SYSTEMS REVIEW AND REVISIONS STATE THAT THE SPECIFIED PORTABLE FIRE EXTINGUISHERS ARE INSTALLED AND MAINTAINED IN ACCORDANCE WITH NFPA 10, WHICH REQUIRES MONTHLY INSPECTIONS (SECTION 4-3.1). CONTRARY TO THE ABOVE, ON OCT 25, 1979, ONE OF THE TWO PORTABLE FIRE EXTINGUISHERS IN EACH OF THE SAFEGUARDS VALVE PIT AREAS FOR UNITS 1 AND 2 WERE FOUND NOT INSPECTED SINCE JANUARY, 1979. (FIRE EXTINGUISHERS #94 AND #131).
(7962 DEVIATION)

* LAST IE SITE INSPECTION DATE: DECEMBER 14, 1979

* INSPECTION REPORT NO: 50-280/79-67

SUMMARY

INSPECTION SUMMARY

* INSPECTION OCTOBER 1-31 (79-62): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 90 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS AND OPERATIONS AND OPERATING RECORDS, PLANT MAINTENANCE, AND PLANT SECURITY. OF THE THREE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; TWO APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN ONE AREA (INFRACTION - FAILURE TO FOLLOW ALARM PROCEDURE; INFRACTION - COOLDOWN RATE EXCEEDED TS LIMIT; ONE NONCOMPLIANCE AND ONE DEVIATION WERE FOUND IN THE REMAINING AREA; INFRACTION ALARM SET POINTS ON RADIATION MONITORS CC-105 AND 106 NOT IN ACCORDANCE WITH TS 3.7; DEVIATION - TWO PORTABLE FIRE EXTINGUISHERS NOT INSPECTED MONTHLY).

(7981 INFRACTION)

CONTRARY TO CRITERION XIII OF APPENDIX B TO 10 CFR 50, HANDLING TECHNIQUES USED IN ACTIVITIES AFFECTING QUALITY WERE NOT PROPERLY CONTROLLED.
(7981 INFRACTION)

TABLE E-3 IN PART IV OF THE SURRY FIRE PROTECTION SYSTEMS REVIEW AND REVISIONS STATE THAT THE SPECIFIED PORTABLE FIRE EXTINGUISHERS ARE INSTALLED AND MAINTAINED IN ACCORDANCE WITH NFPA 10, WHICH REQUIRES MONTHLY INSPECTIONS (SECTION 4-3.1). CONTRARY TO THE ABOVE, ON OCT. 25, 1979, ONE OF THE TWO PORTABLE FIRE EXTINGUISHERS IN EACH OF THE SAFEGUARDS VALVE PIT AREAS FOR UNITS 1 AND 2 WERE FOUND NOT INSPECTED SINCE JANUARY, 1979. (FIRE EXTINGUISHERS #94 AND #131).
(7982 DEVIATION)

PLANT STATUS:

- UNIT IS CURRENTLY SHUT DOWN AND DEFUELED. THE STEAM GENERATOR REPLACEMENT PROJECT COMPLETED.
- LAST IE SITE INSPECTION DATE: DECEMBER 14, 1979
- INSPECTION REPORT NO: 50-281/79-89

SUMMARY

INSPECTION SUMMARY

- INSPECTION OCTOBER 31 - NOVEMBER 2 (79-81): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 18 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONSTRUCTION STATUS, ENGINEERING TASK ASSIGNMENT REVIEW AND OBSERVATION OF SAFETY-RELATED WORK ACTIVITIES. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; TWO ITEMS OF NONCOMPLIANCE WERE FOUND IN ONE AREA (INFRACTION - IMPROPER RIGGING TECHNIQUES; AND INFRACTION - REACTOR COOLANT PUMP OPEN FLANGED NIPPLES).
- INSPECTION OCTOBER 1-31 (79-82): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 90 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS AND OPERATIONS AND OPERATING RECORDS, PLANT MAINTENANCE, AND PLANT SECURITY. OF THE THREE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; TWO APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN ONE AREA (INFRACTION - FAILURE TO FOLLOW ALARM PROCEDURES; INFRACTION ALARM SET POINTS ON RADIATION MONITORS CC-105 AND 106 NOT IN ACCORDANCE WITH TS 3.7; DEVIATION - TWO PORTABLE FIRE EXTINGUISHERS NOT INSPECTED MONTHLY).

SYSTEMS AND COMPONENT PROBLEMS:

Recovery operations from the 3/28/79 incident.

FACILITY ITEMS (PLANS AND PROCEDURES):

* None

MANAGERIAL ITEMS:

* None

PLANT STATUS:

No significant information to report.

* LAST IE SITE INSPECTION DATE: 01/04/80

INSPECTION REPORT NO: 79-30

SUMMARY

INSPECTION SUMMARY

* Mar 19-23 (79-06): Routine, unannounced physical protection inspection to include: Security Plan; Security Program Audit; Security Organization; physical barriers for protected areas; physical barriers for vital areas; lighting; access control-identification; authorization and badging; access control-search; access control-escorting; access control-vital areas; alarm stations, detection aids; assessment aids; communications; testing and maintenance; compensatory measures; power supply; response; locks, keys and combinations, and records and reports. The inspection involved 58 hours onsite by two NRC inspectors. One apparent item of noncompliance was identified (access control-vital areas).

* Oct 23 - Nov 27 (79-29): Special inspection by NRC TMI Site staff of: action on previous inspection findings; new and revised procedures; plant operations including shift activities as monitored by NRC shift inspectors; fire drill at radwaste storage area; EPICOR II operating experience and health physics practices; and, in-plant health physics including documentation, posting and labeling reviews. The inspection included continuous shift coverage by NRC inspectors. One item of noncompliance was identified (failure to store and control licensed materials in unrestricted areas).

LICENSE STATUS

By Order for Modification of License dated July 20, 1979, the licensee's authority to operate the facility was suspended and the licensee's authority was limited to maintenance of the facility in the present shutdown cooling mode (44 F.R. 45271).

INSPECTION STATUS

ENFORCEMENT STATUS

PARAGRAPH 20.103(A)(3) REQUIRES THE LICENSEE TO USE SUITABLE MEASUREMENTS OF CONCENTRATIONS OF RADIOACTIVE MATERIALS IN AIR FOR DETECTING AND EVALUATING AIRBORNE RADIOACTIVITY IN RESTRICTED AREAS WHEN DETERMINING COMPLIANCE WITH THE REQUIREMENTS OF SECTION 20.103, "EXPOSURE OF INDIVIDUALS TO CONCENTRATIONS OF RADIOACTIVE MATERIALS IN AIR IN RESTRICTED AREAS." CONTRARY TO THIS REQUIREMENT, AIR SAMPLES WERE NOT TAKEN WHEN A CONTRACTOR EMPLOYEE PERFORMED WORK INSIDE A STEAM GENERATOR ON OCTOBER 25, 1979 OR WHEN A CONTRACTOR EMPLOYEE(S) EARLIER HAD ENTERED STEAM GENERATORS FOR THE PURPOSE OF SETTING UP THE EDDY CURRENT EQUIPMENT.
(7921 INFRACTION)

PARAGRAPH 2.C(7) OF THE TROJAN FACILITY LICENSE, NRC LICENSE NO. NPF-1, REQUIRES ACTIVITIES TO WHICH A QUALITY ASSURANCE PROGRAM IS APPLICABLE (EXCEPT FOR PIPING SUPPORTS) TO BE CONDUCTED IN ACCORDANCE WITH THE QA PROGRAM FOR OPERATION. SECTION II.B.4 OF TROJAN QA PROCEDURE QAP-11-1 REQUIRES TEST RESULTS TO BE REVIEWED AND SPECIFIES ACTIONS TO BE TAKEN WHEN TEST RESULTS DO NOT MEET ACCEPTANCE CRITERIA. CONTRARY TO THESE REQUIREMENTS, THE TEST RESULTS FOR A PERIODIC OPERATING TEST OF THE "C" SERVICE WATER PUMP PERFORMED ON SEPTEMBER 30, 1979 WERE APPROVED BY RESPONSIBLE REVIEWERS EVEN THOUGH RECORDED PUMP DISCHARGE PRESSURE WAS LESS THAN THE SPECIFIED MINIMUM, AND THE ACTIONS SPECIFIED FOR UNACCEPTABLE TEST RESULTS WERE NOT TAKEN.
(7922 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST (CITE RO REPORT NUMBER, IF APP.)

SYSTEMS AND COMPONENT PROBLEMS: -

- Pipe support and concrete block wall modifications were completed on December 21, 1979.

FACILITY ITEMS (PLANS AND PROCEDURES):

- The Hearing Board removed its shutdown order following a public hearing conducted in Portland on December 28, 1979.

MANAGERIAL ITEMS:

None.

PLANT STATUS

- The reactor was started up on December 31, 1979 in preparation for return to power operation.

LAST IE SITE INSPECTION DATE: 12/03-31/79+

INSPECTION REPORT NO: 50-344/79-24+

SUMMARY

INSPECTION SUMMARY:

- Inspection on November 26-December 12, 1979 (Report No. 50-344/79-20)
  Areas Inspected: Included a review of: security plan; security program audit; security organization; protected area physical barriers; vital area physical barriers; lighting; access control (identification, authorization and badging); access control (search); access control (escorting); access control (vital areas); alarm stations; assessment aids; communications; testing and maintenance; response; locks, keys and combinations; followup on previous items of noncompliance/deviations; followup on unresolved items; followup on IE Bulletin 79-16. The inspection involved 116 inspector hours onsite by three NRC inspectors.

  Results: The licensee was found to be in compliance with NRC requirements within the 16 areas examined during this inspection with the following exceptions: (1) Access controls (identification, authorization and badging) - Badge for former site employee not on current access list was available for issue - Infraction. (2) Access control (identification, authorization and badging) - Former contractor employee with no current work related need for access to site was on access list and access badge was on file - Infraction. (3) Access controls (identification, authorization and badging) - Failure of guard to require pocket-carried identification - Infraction. (4) Access control (vital area) - Contract employees not authorized to allow visitor access to the site or vital areas did allow the site and vital area access - Violation.

- Inspection on October 25-26 & November 5-7, 1979 (Report No. 50-344/79-21)
  Areas Inspected: Emergency drill; possible overexposure; licensee investigation of steam generator exposures; radiation protection training; surveys; radiation work permits; organization; QA report of rad waste and shipping audit; detection of tritium in recreation lake; and tour of containment. The inspection involved 52 inspector hours onsite by two NRC inspectors.

  Results: Of the ten areas inspected, no items of noncompliance or deviations were found in nine areas; one item of noncompliance was found in one area (Infraction - Failure to take an air sample while persons were working in the steam generators).

- Inspection on November 6-8, 1979 (Report No. 50-344/79-22)
  Areas Inspected: Routine, unannounced inspection of employee training; response to IE Bulletins and Circulars; and followup on previous inspection items; also included independent inspection effort. The inspection involved 34 inspector hours onsite by two NRC inspectors.

  Results: Of the two areas inspected, one noncompliance item was identified in one area (Infraction - Failure to take followup actions on unacceptable surveillance test results).

- Inspection on November 1-30, 1979 (Report No. 50-344/79-23)
  Routine inspections of plant operations, maintenance, physical security, calibration, environmental and radiological protection, and followup on a licensee event report. The inspection involved 78 inspector hours by the NRC Resident Inspector.

  Results: One item of noncompliance was identified (Infraction - Failure to follow quality assurance procedure for calibration of installed plant instrumentation). No deviations were identified.

- Inspection on December 3-31, 1979 (Report No. 50-344/79-24)
  Report being prepared; to be reported next month.

- Inspection on November 26-28 & December 4, 1979 (Report No. 50-344/79-25)
  Areas Inspected: Special, announced inspection of the circumstances surrounding and corrective actions taken by the licensee as a consequence of Licensee Event Report (LER 79-15). The inspection involved 63 inspector hours by three NRC inspectors.

  Results: No items of noncompliance or deviations were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TS 3.5.C.2 & 4.5.C.2, RHRSW PUMP WAS INTENTIONALLY MADE INOPERABLE WITHOUT INSTITUTING VERIFICATION OF THE OPERABILITY OF THE REDUNDANT RHRSW SUBSYSTEM.
(7917 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- The unit was shutdown on January 5 when a packing leak developed in an RHR system isolation valve inside the drywell. No release of radioactive material occurred. Power operation resumed on January 6.

FACILITY ITEMS (PLANS AND PROCEDURES):

- A one week outage is scheduled to begin on February 16 to complete system modifications necessitated by NUREG 0578.

MANAGERIAL ITEMS:

None

PLANT STATUS:

- Operating at 92 percent power, with escalation to full power in progress. SJAE offgas rate is 2650 microcuries per second. Stack release rate is below 100 microcuries per second.

- LAST IE SITE INSPECTION DATE: 01/10/80
- INSPECTION REPORT NO: 80-01

SUMMARY

INSPECTION SUMMARY

- Oct 16-19, 22-26 & 29-31 (79-18): Routine, unannounced inspection of QA Program implementation including: QA Program Changes; Organization; Design changes/Modifications; Document Control including Drawings; and licensee action on previous inspection findings. The inspection involved 130 hours onsite and 40 hours at the corporate offices by two region-based inspectors. No items of noncompliance were identified.
- Oct 29-30 (79-19): Routine, unannounced, onsite inspection (19 hours) by a region-based inspector of the containment integrated leak rate test, backshift operations, previous inspection items and system seismic design. No items of noncompliance were identified.
- Nov 28-30 (79-21): Routine, unannounced inspection of plant operations, including facility records and inspection tours of accessible plant areas; licensee action on previous inspection items; followup on IE Bulletins and Circulars; licensee review of Temporary Procedure Changes; Licensee Event Reports and Monthly Operating Reports; and, licensee action on Small Break LOCA procedures. The inspection involved 40 hours onsite by two region-based inspectors. No items of noncompliance were identified.
- Dec 5-6 (79-22): Special, unannounced inspection by a region-based inspector of the licensee's response to Bulletin 79-19, including: regulatory requirements, burial site requirements, procedures, training, audits, records of shipments, onsite observations, and discrepant shipping reports. No items of noncompliance or deviations were disclosed.

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 6.2.A.11 REQUIRES ADHERENCE TO FIRE PROTECTION PROGRAM IMPLEMENTATION PROCEDURES. CONTRARY TO THE ABOVE, ON OCTOBER 31, 1979, WELDING TOOK PLACE IN THE UNIT 1 TURBINE BUILDING WITHOUT A PORTABLE FIRE EXTINGUISHER AT THE JOB SITE, AS SPECIFIED BY THE APPROVED WELDING AUTHORIZATION CARD.
(7924 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- Portable demineralizers continue to be used for processing radioactive liquids due to operational problems with the installed cement solidification system. (79-25)

FACILITY ITEMS(PLANS AND PROCEDURES):

- Radwaste shipments were resumed to Barnwell, South Carolina on November 20, 1979 following rescission of a shipping ban imposed by the State of South Carolina. (79-25)

MANAGERIAL ITEMS:

- The licensee has committed to review/revise the procedures and training program for processing, packaging, transfer, and transport of radioactive materials by early 1980. (79-25)

PLANT STATUS

- The unit was shut down on October 6, 1979 to begin a scheduled 8-week refueling/maintenance outage. The outage schedule has been extended by about 7 weeks due to the system and component problems discussed above. The tentative startup date is January 19, 1980.

*LAST IE SITE INSPECTION DATE: November 19-20, 1979

- INSPECTION REPORT NO: 79-25

SUMMARY

INSPECTION SUMMARY

- Inspection on October 1 through November 5, (79-24): Routine, unannounced resident inspection of licensee action on previous inspection findings, maintenance, plant operations including followup of nonroutine events, review and followup of LER's, Unit 1 refueling activities, surveillance and calibration of safety related components required by TS, radioactive waste systems, preparation for Unit 1 refueling, receipt of new fuel for Unit 1, feedwater line cracking on Unit 1, fire protection and diesel generator roller pin inspections. The inspection involved 133 inspector hours onsite by one NRC inspector. One item of noncompliance (failure to follow procedures which implement the fire protection program) was identified.
- Inspection on November 19-20, (79-25): Nonroutine, announced inspection of licensee actions taken in response to IE Bulletin 79-19 "Packaging of Low-Level Radioactive Waste for Transport and Burial" and, as agreed with the State of South Carolina, verification that identified packaging discrepancies were corrected before resumption of radwaste shipments to Barnwell, South Carolina. The inspection involved 28 inspector hours onsite by two NRC inspectors. No items of noncompliance or deviations were identified.

III. Independent Spent Fuel Storage Installations (h)							
Morris Operations		750 MTU (j)	310	390 MTU (j)	1490 MTU (j)		
NFS(i)		250 MTU	170 MTU	80 MTU			

(a) At each refueling outage approximately 1/3 of a PWR core and 1/4 of a BWR core is off-loaded.
(b) Some of these dates have been adjusted by staff assumptions.
(c) This is the total for both units.
(d) Plant not in commercial operation.
(e) Some spent fuel stored at Brunswick.
(f) Authorized a total 2088 BWR and 304 PWR assemblies for both pools.
(g) Robinson 2 assemblies being shipped to Brunswick for storage.
(h) Capacity is in metric tons of uranium; 1 MTU = 2 PWR assemblies or 5 BWR assemblies.
(i) No longer accepting spent fuel.
(j) Racked for 700 MTU.
(k) Reserved
(l) This is the station total.

N/S = Not Scheduled Yet

The total of Reactor years of experience is as the sum of all calendar days for each unit, from the date that electricity was first generated until a final shutdown date or the status date, whichever comes first, divided by 365.25 days/year.

If a date is unknown, the first day of the first month of operation is substituted. Units which have not yet generated electricity but which are licensed are listed but not included in the computation.

REACTOR-YEARS OF EXPERIENCE

(INFORMATION INCLUDES BOTH LICENSED AND NON–LICENSED ELECTRICAL UNITS).

TOTAL			56.23 YEARS

*NOTE: HUMBOLDT BAY AND THREE MILE ISLAND 2 HAVE BEEN CHANGED FROM THE CATEGORY OF "LICENSED OPERATING ELECTRICAL PRODUCING UNITS" TO THE CLASSIFICATION OF A "PERMANENTLY OR INDEFINITELY SHUTDOWN UNITS". FOR THE COMPUTATION OF REACTOR YEARS OF EXPERIENCE, THEIR EFFECTIVE SHUTDOWN OR ELECTRICAL CESSATION DATE IS AS LISTED. BECAUSE, IN PREVIOUS EDITIONS, THESE TWO UNITS HAD BEEN CONSIDERED TO BE OPERATING UNITS, THE TOTAL YEARS OF OPERATING EXPERIENCE WILL NOT BE CONSISTENT WITH THE VALUE PUBLISHED FOR NOVEMBER 1, 1979.

OPERATING UNITS STATUS REPORT

DATA AS OF 01-31-80

LICENSED OPERATING REACTORS

AUTHORIZATION AND CLEARANCE

THE U.S. NUCLEAR REGULATORY COMMISSION'S OFFICE OF MANAGEMENT AND PROGRAM ANALYSIS PUBLISHES THIS MONTHLY STATUS REPORT "AS PART OF THE REPORTING REQUIREMENTS IN SECTION 50.36 OF 10 CFR PART 50 UNDER GAO CLEARANCE NUMBER B-180225, WITH AN EXPIRATION DATE OF SEPTEMBER 30, 1981," AS STATED IN THE OCTOBER 3, 1978 LETTER FROM JOHN M. LOVELADY, ASSISTANT DIRECTOR, GENERAL GOVERNMENT DIVISION, U. S. GENERAL ACCOUNTING OFFICE, TO J.M. FELTON, DIRECTOR, DIVISION OF RULES AND RECORDS, U.S. NUCLEAR REGULATORY COMMISSION.

STATEMENT OF PURPOSE

The U. S. Nuclear Regulatory Commission's monthly OPERATING UNITS STATUS REPORT – LICENSED OPERATING REACTORS, provides data on the operation of nuclear units as timely and accurately as possible. This information is collected by the Office of Management and Program Analysis from the Headquarters Staff of NRC's Office of Inspection and Enforcement, from NRC's Regional Offices, and from utilities. Since all of the data concerning operation of the units is provided by the utility operators less than two weeks after the end of the month, necessary corrections to published information are shown on the ERRATA page.

This report is divided into three sections: the first contains monthly highlights and statistics for commercial operating units, and errata from previously reported data; the second is a compilation of detailed information on each unit, provided by NRC Regional Offices and IE Headquarters; and the third section is an appendix containing nuclear availability and capacity factors, forced outage rate statistics, spent fuel storage capability, reactor-years of experience and non-power reactors in the United States.

Throughout the report, statistical factors for periods greater than a report month, or for more than one unit, are computed as the arithmetic average of each unit's individual operating statistics. The statistical factors for each unit for the report month are computed from actual power production for the month. The factors for the life-span of each unit (the "Cumulative" column) are reported by the utility and are not entirely re-computed by NRC. Utility power production data is checked for consistency with previously submitted statistics.

It is hoped this status report proves informative and helpful to all agencies and individuals interested in analyzing trends in the nuclear industry which might have safety implications, or in maintaining an awareness of the U. S. energy situation as a whole.

TABLE OF CONTENTS

GLOSSARY ii
INDEX TO LICENSED UNITS iii

SECTION 1 – CURRENT DATA SUMMARIES

MONTHLY HIGHLIGHTS OF COMMERCIAL NUCLEAR POWER UNITS 1-2

- Licensed Power Reactors 1-2
- Power Generation 1-2
- Actual vs. Potential Energy Production 1-2
- Outage Data 1-2
- Derated Units 1-2
- Shutdowns - Number and Reasons 1-3
- Unit Availability, Capacity, and Forced Outage Rate 1-3
- Refueling Schedule 1-3

AVERAGE CAPACITY FACTORS BY VENDOR 1-4

AVERAGE DAILY POWER LEVEL FOR ALL COMMERCIAL OPERATING UNITS 1-5

ERRATA 1-7

SECTION 2 – OPERATING POWER REACTORS

ARKANSAS 1 THROUGH ZION 2 PAGES A–2 TO Z–5

- Facility Data
- Inspection and Enforcement Status
- Reports Received from Licensee
- Operating Status
- Average Daily Power Level (MWe)
- Unit Shutdowns/Reductions

SECTION 3 – APPENDIX

STATUS OF SPENT FUEL STORAGE CAPABILITY 3-2
REACTOR-YEARS OF EXPERIENCE 3-3
NON-POWER REACTORS IN THE U.S. 3-4

GLOSSARY

AVERAGE DAILY POWER LEVEL (MWe)	The net electrical energy generated during the day (measured from 0001 to 2400 hours inclusive) in megawatts hours divided by 24 hours.
LICENSED THERMAL POWER (MWt)	The maximum thermal power of the reactor authorized by the NRC, expressed in megawatts.
DATE OF COMMERCIAL OPERATION	Date unit was declared by utility owner to be available for the regular production of electricity; usually related to satisfactory completion of qualification tests as specified in the purchase contract and to accounting policies and practices of utility.
DESIGN ELECTRICAL RATING (DER) (Net MWe)	The nominal net electrical output of the unit specified by the utility and used for the purpose of plant design.
FORCED OUTAGE	An outage required to be initiated no later than the weekend following discovery of an off-normal condition.
FORCED OUTAGE HOURS	The clock hours during the report period that a unit is unavailable due to forced outages.
GROSS ELECTRICAL ENERGY GENERATED (MWH)	Electrical output of the unit during the report period as measured at the output terminals of the turbine generator, in megawatts hours.
GROSS HOURS	The clock hours from the beginning of a specified situation until its end. For outage durations, the clock hours during which the unit is not in power production.
GROSS THERMAL ENERGY GENERATED (MWH)	The thermal energy produced by the unit during the report period as measured or computed by the licensee in megawatt hours.
HOURS GENERATOR ON-LINE	Also, "Unit Service Hours." The total clock hours in the report period during which the unit operated with breakers closed to the station bus. These hours added to the total outage hours experienced by the unit during the report period, shall equal the hours in the report period.
HOURS IN REPORTING PERIOD	For units in power ascension at the end of the period, the gross hours from the beginning of the period or the first electrical production, whichever comes last, to the end of the period. For units in commercial operation at the end of the period, the gross hours from the beginning of the period or of commercial operation, whichever comes last, to the end of the period or decommissioning, whichever comes first.
HOURS REACTOR CRITICAL	The total clock hours in the report period during which the reactor sustained a controlled chain reaction.
MAXIMUM DEPENDABLE CAPACITY (GROSS) (MDC Gross) (Gross MWe)	Dependable main-unit gross capacity, winter or summer, whichever is smaller. The dependable capacity varies because the unit efficiency varies during the year due to cooling water temperature variations. It is the gross electrical output as measured at the output terminals of the turbine generator during the most restrictive seasonal conditions (usually summer).
MAXIMUM DEPENDABLE CAPACITY (NET) (MDC Net) (Net MWe)	Maximum Dependable Capacity (Gross) less the normal station service loads.
NAMEPLATE RATING (Gross MWe)	The nameplate power designation of the generator in megavolt amperes (MVA) times the nameplate power factor of the generator. NOTE: The nameplate rating of the generator may not be indicative of the maximum or dependable capacity, since some other item of equipment of a lesser rating (e.g., turbine) may limit unit output.
NET ELECTRICAL ENERGY GENERATED	Gross electrical output of the unit measured at the output terminals of the turbine generator during the reporting period, minus the normal station service electrical energy utilization. If this quantity is less than zero, a negative number should be recorded.
OUTAGE	A situation in which no electrical production takes place.
OUTAGE DATE	As reported on Appendix D of Reg. Guide 1.16, the date of the start of the outage. If continued from a previous month, report the same outage date but change "Method of Shutting Down Reactor" to "4 (Other)" and add a note: "Continued from previous month."
OUTAGE DURATION	The total clock hours of the outage measured from the beginning of the report period or the outage, whichever comes last, to the end of the report period or the outage, whichever comes first.
OUTAGE NUMBER	A number unique to the outage assigned by the licensee. The same number is reported each month in which the outage is in progress. One format is "76-05" for the fifth outage to occur in 1976.
PERIOD HOURS	See "Hours in Reporting Period."
POWER REDUCTION	A reduction in the Average Daily Power Level of more than 20% from the previous day. All power reductions are defined as outage of zero hours durations for the purpose of computing unit service and availability factors, and forced outage rate.
REACTOR AVAILABLE HOURS	The total clock hours in the report period during which the reactor was critical or was capable of being made critical. (Reactor Reserve Shutdown Hours + Hours Reactor Critical.)
REACTOR AVAILABILITY FACTOR	$\frac{\text{Reactor Available Hours x 100}}{\text{Period Hours}}$
REACTOR RESERVE SHUTDOWN	The cessation of criticality in the reactor for administrative or other similar reasons when operation could have been continued.
REACTOR RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the reactor is in reserve shutdown mode. NOTE: No credit is given for NRC imposed shutdowns.
REACTOR SERVICE FACTOR	$\frac{\text{Hours Reactor Critical x 100}}{\text{Period Hours}}$
REPORT PERIOD	Usually, the preceding calendar month. Can also be the preceding calendar year, (Year-to-Date), or the life-span of a unit (cumulative).
RESTRICTED POWER LEVEL	Maximum net electrical generation to which the unit is restricted during the report period due to the state of equipment, external conditions, administrative reasons, or a direction by NRC.
SCHEDULED OUTAGE	Planned removal of a unit from service for refueling, inspection, training, or maintenance. Those outages which do not fit the definition of "Forced Outage" perforce are "Scheduled Outages."
STARTUP AND POWER ASCENSION TEST PHASE	Period following initial criticality during which the unit is tested at successively higher levels, culminating with operation at full power for a sustained period and completion of warranty runs. Following this phase, the utility generally considers the unit to be available for commercial operation.
UNIT	The set of equipment uniquely associated with the reactor, including turbine generators, and ancillary equipment, considered as a single electrical energy production facility.
UNIT AVAILABLE HOURS	The total clock hours in the report period during which the unit operated on-line or was capable of such operation. (Unit Reserve Shutdown Hours + Hours Generator On-Line.)
UNIT AVAILABILITY FACTOR*	$\frac{\text{Unit Available Hours x 100}}{\text{Period Hours}}$
UNIT CAPACITY FACTORS	
– Using Licensed Thermal Power	$\frac{\text{Gross Thermal Energy Generated x 100}}{\text{Period Hours x Lic. Thermal Power}}$
– Using Nameplate Rating	$\frac{\text{Gross Electrical Energy Generated x 100}}{\text{Period Hours x Nameplate Rating}}$
– Using DER	$\frac{\text{Net Electrical Energy Generated x 100}}{\text{Period Hours x DER}}$
– Using MDC Gross	$\frac{\text{Gross Electrical Energy Generated x 100}}{\text{Period Hours x MDC Gross}}$
– Using MDC Net	$\frac{\text{Net Electrical Energy Generated x 100}}{\text{Period Hours x MDC Net}}$

NOTE: if MDC Gross and/or MDC Net have not been determined, the DER is substituted for this quantity for Unit Capacity Factor calculations.

UNIT FORCED OUTAGE RATE	$\frac{\text{Forced Outage Hours}}{\text{Unit Service Hours + Forced Outage Hours}}$
UNIT RESERVE SHUTDOWN	The removal of the unit from on-line operation for economic or other similar reasons when operation could have been continued.
UNIT RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the unit was in reserve shutdown mode.
UNIT SERVICE FACTOR	$\frac{\text{Unit Service Hours x 100}}{\text{Period Hours}}$
UNIT SERVICE HOURS	See "Hours Generator On-Line."

THREE MILE ISLAND 1	.0

8 UNITS

2. COMPUTED BY RATIO OF VENDOR TOTALS

	GE BWR's	W PWR's	CE PWR's	B&W PWR's	All PWR's
NET ELECTRICAL PRODUCTION	7,857,163	6,462,254	2,189,881	2,495,423	11,147,558
MDC NET	17,351	18,435	5,178	6,768	30,381
CFMDC	61.1	47.1	56.8	49.6	49.3

Capacity factor in this page, denoted as CFMDC, is a function of the net maximum dependable capacity. See the corresponding definition in the Glossary. The vendor averages are computed by the formula:

$$\frac{\text{Net Electrical Energy Produced by Vendor}}{\text{Potential Electrical Production By Vendor In This Month}} \times 100\%$$

Units Excluded	Reason for Exclusion
Indian Point 1 Humboldt Bay Three Mile Island 2	Unit Shutdown Indefinitely
Arkansas 2	Not in Commercial Operation
Big Rock Point	Not Representative of Typical BWRs
LaCrosse	Not Representative of Typical BWRs and Atypical Vendor
Fort St. Vrain	Atypical Vendor and Reactor Design

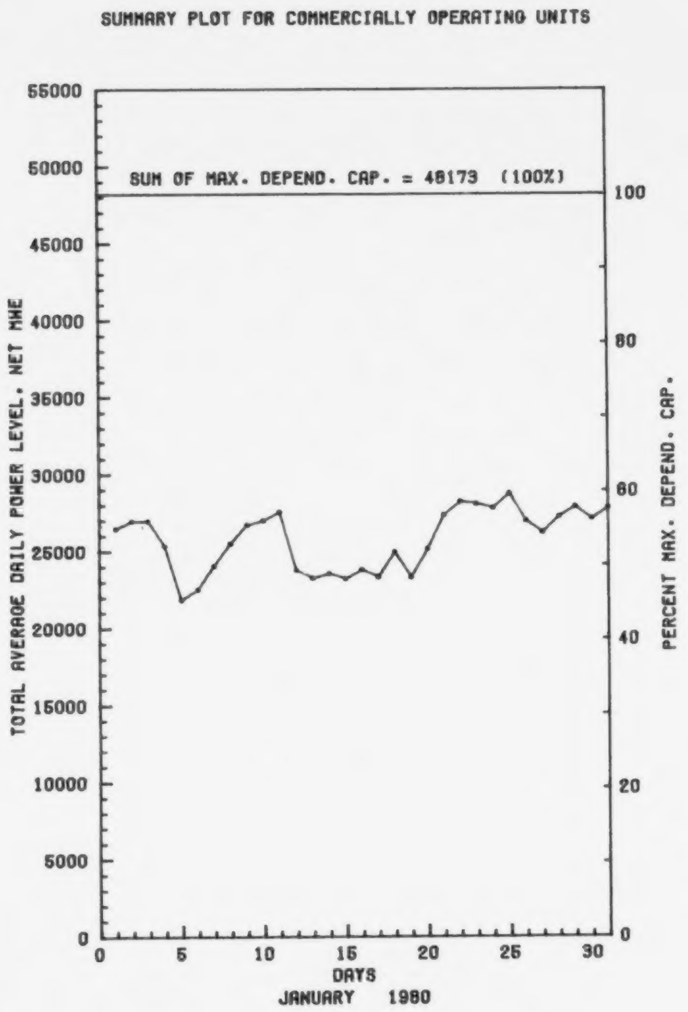
AVERAGE DAILY POWER LEVEL FOR ALL COMMERCIALLY OPERATING UNITS

This chart depicts the average daily power level for the units in commercial operation during the month.

The straight line on the graph labelled "SUM OF MAX DEP CAP'S" is plotted at the value shown by summing the separate maximum dependable capacities of the commercially operating units (in Net MWe). The plot shown below the line is calculated by summing the separate average daily power levels of the commercially operating units for each day of the month.

The scale on the left vertical axis runs in 1,000 MWe increments from 0 to 55,000 MWe (Net). The right vertical axis shows the percentage in 10% increments, up to 100% of the "SUM OF MAX DEP CAP'S."

It should be recognized that the 100% line would be obtainable only if all of the commercially operating units operated at 100% capacity, 24 hours per day, for the entire month. In other words, since any power generator must occasionally shut down to refuel and/or perform needed maintenance, and also since 100% capacity production is not always required by power demands, the 100% line is a theoretical goal and not a practical one.



ERRATA

Corrections and Amendments to Previously-Reported Data

(NOTE: These changes are reflected in the data contained in the current report)

CORRECTIONS TO NUREG 0020, VOL. 4 NO. 1, JANUARY 1980

Page	Unit Name	Item	Correction
C-13	Crystal River 3	16. Gross Thermal Energy (MWH)	The monthly value for December 1979 should have been 588,283 rather than the published value of 588,258 MWt.

MULTIPLE - ISSUE CORRECTIONS

BEAVER VALLEY	THE LICENSED THERMAL POWER SHOULD HAVE BEEN LISTED AS 2660 MWt RATHER THAN THE PUBLISHED VALUE OF 2652 MWt.
NINE MILE POINT	THE LICENSEE HAS RECOMPUTED THE LIFETIME VALUE OF THE GROSS THERMAL ENERGY'. MONTHLY CHANGES (IF AFTER 12/78) WILL BE PUBLISHED WHEN FURTHER INFORMATION IS RECEIVED FROM THE LICENSEE.
RANCHO SECO	THE LIFETIME VALUE OF GROSS THERMAL ENERGY HAS BEEN RECOMPUTED DUE TO A CHANGE IN THE CALCULATING COEFFICIENT. THE REVISED MONTHLY VALUES ARE:

DECEMBER 78	573,006 MWt
JANUARY 79	1,924,056
FEBRUARY 79	1,634,206
MARCH 79	2,028,439
APRIL 79	1,718,884
MAY 79	1,453,504
JUNE 79	N/A
JULY 79	N/A
AUGUST 79	1,991,649
SEPTEMBER 79	1,834,975
OCTOBER 79	1,745,162
NOVEMBER 79	1,615,034

PLANT STATUS:

+ THE UNIT WAS SHUT DOWN DURING THE MONTH OF JANUARY FOR LOW PRESSURE TURBINE REPAIRS, PIPE SUPPORT MODIFICATIONS, AND DESIGN CHANGES REQUIRED BY NUREG 0578.

LAST IE SITE INSPECTION DATE: JANUARY 7 - JANUARY 18, 1980 +

INSPECTION REPORT NO: 50-313/80-01 +

SUMMARY

INSPECTION SUMMARY

INSPECTION CONDUCTED DURING PERIOD OF NOVEMBER 22 - DECEMBER 21, 1979 (79-25): ROUTINE, ANNOUNCED INSPECTION OF PREVIOUSLY IDENTIFIED INSPECTION ITEMS, LICENSEE ACTIONS IN RESPONSE TO IE BULLETINS, PLANT OPERATIONS, AND PROCEDURES. WITHIN THE FOUR AREAS INSPECTED, ONE ITEM OF NONCOMPLIANCE WAS IDENTIFIED (INFRACTION - FAILURE TO MAINTAIN PROCEDURE).

INSPECTION CONDUCTED DURING THE PERIOD OF DECEMBER 17-20, 1979 (79-26): ROUTINE, UNANNOUNCED INSPECTION OF PREVIOUSLY IDENTIFIED ITEMS, CALIBRATION OF LICENSE SPECIFIED INSTRUMENTATION AND CALIBRATION OF GENERAL SAFETY-RELATED INSTRUMENTATION. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION CONDUCTED DURING THE PERIOD OF DECEMBER 18-20, 1979 (79-27): INCLUDED A REVIEW OF: SECURITY PLAN; SECURITY ORGANIZATION; THE PROTECTED AREA PHYSICAL BARRIERS; ACCESS CONTROL (IDENTIFICATION, AUTHORIZATION, AND BADGING); FOLLOW-UP ON PREVIOUS UNRESOLVED ITEMS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN ALL AREAS EXAMINED DURING THIS INSPECTION EXCEPT FOR THE FOLLOWING. THE LICENSEE FAILED TO ENFORCE THE ISP REQUIREMENT THAT ALL VEHICLES (LDV) HAVE THE IGNITION KEY REMOVED AND THE LDV CAB LOCKED.

INSPECTION CONDUCTED JANUARY 7 - 18, 1980 (80-01): ROUTINE, UNANNOUNCED INSPECTION OF PREVIOUSLY IDENTIFIED ITEMS, AND CONTROL OF DESIGN CHANGES AND MODIFICATIONS. TWO ITEMS OF NONCOMPLIANCE INVOLVING FAILURE TO COMPLY WITH APPENDIX B TO 10 CFR 50 WERE IDENTIFIED.

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TECHNICAL SPECIFICATION 6.8.1, THE LICENSEE FAILED TO ADHERE TO THE PROCEDURAL REQUIREMENTS OF PROCEDURE 2.300.01, POWER ASCENSION TEST, APPENDIX U, ATTACHMENT U-5, REACTOR REGULATING SYSTEM TEST, STEPS B.5, C.5, B.10 AND C.10 WITH RESPECT TO THE METHOD PRESCRIBED TO BE USED FOR CHANGING AVERAGE REACTOR COOLANT SYSTEM TEMPERATURE.
(7924 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

The 4 RTD's on the west side of the hot legs normally indicate a temperature about 3 degrees F higher than the 4 RTD's on the east side of the hot legs at 50 % power. This relationship occasionally reverses. A design change to minimize the effect of the anomaly on the Core Protection Calculators has been installed.

FACILITY ITEMS (PLANS AND PROCEDURES):

MANAGERIAL ITEMS:

PLANT STATUS:

DURING THIS PERIOD THE UNIT COMPLETED 80% PLATEAU AND PART OF 100% PLATEAU OF POWER ASCENSION TEST. THE PLANT IS NOW IN COLD SHUTDOWN IMPLEMENTING NUREG 0578 REQUIREMENTS.

LAST IE INSPECTION DATE: JANUARY 7 - 18, 1980

INSPECTION REPORT NO: 50-368/80-01

SUMMARY

INSPECTION SUMMARY

INSPECTION CONDUCTED DURING PERIOD OF NOVEMBER 22 - DECEMBER 21, 1979 (79-24): ROUTINE, ANNOUNCED INSPECTION OF PREVIOUSLY IDENTIFIED INSPECTION ITEMS, POWER ASCENSION TESTING, 50% PLATEAU DATA REVIEW, FOLLOW-UP ON LICENSEE EVENT REPORTS, AND LICENSEE ACTION IN RESPONSE TO IE BULLETINS. ONE APPARENT ITEM OF NONCOMPLIANCE INVOLVING FAILURE TO ADHERE TO PROCEDURE WAS IDENTIFIED.

INSPECTION CONDUCTED DURING THE PERIOD OF DECEMBER 17-20, 1979 (79-25): ROUTINE, UNANNOUNCED INSPECTION OF PREVIOUSLY IDENTIFIED ITEMS, CALIBRATION OF LICENSE SPECIFIED INSTRUMENTATION AND CALIBRATION OF GENERAL SAFETY-RELATED INSTRUMENTATION. NO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED.

INSPECTION CONDUCTED DURING THE PERIOD OF DECEMBER 18-20, 1979 (79-26) INCLUDED A REVIEW OF: SECURITY PLAN; SECURITY ORGANIZATION; THE PROTECTED AREA PHYSICAL BARRIERS; ACCESS CONTROL (IDENTIFICATION, AUTHORIZATION, AND BADGING); FOLLOW-UP ON PREVIOUS UNRESOLVED ITEMS. ONE APPARENT ITEM OF NONCOMPLIANCE INVOLVING FAILURE TO ENFORCE THE ISP REQUIREMENT THAT ALL VEHICLES HAVE IGNITION KEY REMOVED AND THE LDV CAB LOCKED WAS IDENTIFIED.

INSPECTION CONDUCTED JANUARY 7-18, 1980 (80-01): ROUTINE, UNANNOUNCED INSPECTION OF PREVIOUSLY IDENTIFIED ITEMS, AND CONTROL OF DESIGN AND DESIGN CHANGES AND MODIFICATIONS. TWO APPARENT ITEMS OF NONCOMPLIANCE INVOLVING FAILURE TO COMPLY WITH APPENDIX B TO 10 CFR 50 WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 55 APPENDIX A & THE BV TRAINING MANUAL, 6 INDIVIDUALS WERE DELINQUENT IN INDIVIDUAL STUDY ASSIGNMENTS & 1 INDIVIDUAL WAS DELINQUENT IN REMEDIAL TRAINING.
(7923 DEFICIENCY)

NONCONTROLLED COPIES OF SURVEILLANCE PROCEDURES WERE BEING MAINTAINED BY SHIFT SUPERVISOR CONCURRENTLY WITH CONTROLLED COPIES OF THE SAME PROCEDURES. THIS CAUSED SOME OF THE CONTROLLED COPIES NOT TO HAVE THE LATEST CHANGE POSTED AND TO HAVE AT LEAST ONE SURVEILLANCE PROCEDURE TO HAVE BEEN ACCOMPLISHED WITHOUT THE LATEST CHANGE POSTED.
(7925 DEFICIENCY)

TS 6.11 REQUIRES THAT "PROCEDURES FOR PERSONNEL RADIATION PROTECTION SHALL BE PREPARED CONSISTENT WITH THE REQUIREMENTS OF 10 CFR PART 20 & SHALL BE APPROVED, MAINTAINED & ADHERED TO FOR ALL OPERATIONS INVOLVING PERSONNEL RADIATION EXPOSURE". CONTRARY TO THE ABOVE REQUIREMENT, DURING THE PERIOD 11/21-23/79, ON 3 OCCASIONS, RESPIRATORS WERE ISSUED TO PERSONNEL WHO WERE NOT ON THE TRAINING LIST & ON 1 OCCASION A RESPIRATOR WAS ISSUED TO AN INDIVIDUAL WHO WAS NOT LISTED FOR THAT TYPE OF RESPIRATOR.
(7926 INFRACTION)

CONTRARY TO TS 6.8.1 & STATION ADMINISTRATIVE DIRECTIVE 08, CORRECTIVE MAINTENANCE PROCEDURE NO. 1-75-159, "OPERATING & MAINTENANCE PROCEDURE FOR ITT GRINNELL SNUBBER TESTER" WAS NOT IMPLEMENTED IN THAT: DURING THE FUNCTIONAL TESTING OF ITT GRINNELL SNUBBERS FROM 7/5 TO 7/13/79 THE HYDRAULIC FLUID TEMPERATURE WAS NOT MEASURED OR RECORDED ON THE TEST REPORT FORM PHD-5434-F.
(7929 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

None.

FACILITY ITEMS (PLANS AND PROCEDURES):

+ The facility began an extended refueling/modification outage on 11/30/79.

MANAGERIAL ITEMS:

+ A partial reorganization of station and corporate departments began on 12/16/79, and is substantially complete, pending further personnel assignments and approval of revised Tech. Specs.

PLANT STATUS:

+ Plant was defueled for in-service inspection while continuing to maintain Mode C (refueling) conditions. Core reload is tentatively scheduled to begin 2/14/80.

+ LAST IE SITE INSPECTION DATE: 2/11/80

+ INSPECTION REPORT NO: 50-334/80-01

SUMMARY

INSPECTION SUMMARY

+ 50-334/79-22 - Oct 2-Nov 2: Routine resident inspector review (55 hours onsite). Inspection areas (8): Action on previous inspection findings; plant operations; IE Bulletin and Circular followup; plans for coping with strikes; licensee event reports; periodic reports; and followup on a reactor trip. Noncompliances: None.

+ 50-334/79-25 - Nov 13-16: Routine, unannounced inspection by a region-based inspector (30 hours onsite). Inspection areas (5): administrative controls for surveillance procedures; surveillance testing; inspector witnessing of surveillance testing; technician qualification; and control room observations. Noncompliances: One (Failure to maintain controlled copies of surveillance procedures current).

NRC POWER RESTRICTIONS: NONE

3	01/18/80	F	.0	A	5				3. INTERMEDIATE PRESSURE REGULATOR TEST - POWER REDUCTION.

SUMMARY

THE UNIT REMAINED OFF-LINE UNTIL 01/12/80 PER REQUIREMENTS OF NUREG-0578. ON 01/13/80, THE UNIT WAS SHUTDOWN DUE TO FAILURE OF THE INTERMEDIATE POWER RANGE MONITOR. AN OUTAGE ALSO OCCURRED ON 01/15/80 FROM INTERMEDIATE PRESSURE REGULATOR FAILURE, WITH A LOAD REDUCTION ON 01/18/80 FOR TESTING. MAXIMUM DEPENDABLE CAPACITY (NET MWE) HAS BEEN DECREASED FROM 65 TO 63 DUE TO FUEL THERMAL HYDRAULIC LIMIT MARGINS.

SUMMARY

INSPECTION SUMMARY

◆ INSPECTION NOVEMBER 27 - DECEMBER 7 (79-46): THIS ROUTINE INSPECTION INVOLVED 15 RESIDENT INSPECTOR-HOURS IN THE AREAS OF PLANT OPERATIONS, PLANT TOURS, REPORTABLE OCCURRENCES, REFUELING, MAINTENANCE, PLANT PHYSICAL PROTECTION, TRAINING AND RADIATION AREA CONTROLS. OF THE EIGHT AREAS INSPECTED NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 10-14 (79-45): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED 5 INSPECTOR-HOURS ON SITE IN THE AREAS OF UNIT 3 CONTAINMENT INTEGRITY FOLLOWING THE DECEMBER 6, 1979, STARTUP, PLANT TOURS AND PLANT OPERATIONS REVIEW COMMITTEE (PORC) MEETING. OF THE THREE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION NOVEMBER 26-27 (79-42): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED 5 INSPECTOR-HOURS ON SITE IN THE AREA OF SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS (IE BULLETIN 79-14). OF THE ONE AREA INSPECTED, ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO TAKE CORRECTIVE ACTION).

INSPECTION OCTOBER 15 - NOVEMBER 9 (79-39): THIS ROUTINE INSPECTION INVOLVED 30 RESIDENT INSPECTOR-HOURS IN THE AREAS OF PLANT OPERATIONS, PLANT TOURS, REPORTABLE OCCURRENCES, REFUELING, MAINTENANCE, PLANT PHYSICAL PROTECTION AND RADIATION AREA CONTROLS. OF THE SIX AREAS INSPECTED NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION NOVEMBER 19-23 (79-38): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 5 INSPECTOR-HOURS ON SITE IN THE AREA OF FOLLOWUP ON PREVIOUSLY IDENTIFIED OPEN AND UNRESOLVED ITEMS. OF THE ONE AREA INSPECTED, NO ITEM OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 50.54(O) AND SECTION II.E. AND II.F. OF APPENDIX J TO 10 CFR 50 THE LICENSEE REMOVED THE NORMAL HATCH COVER AND INSTALLED A TEMPORARY HATCH COVER ON THE CONTROL ROD DRIVE HATCH PENETRATION DURING THE TYPE A CONTAINMENT INTEGRATED LEAK RATE TEST PERFORMED NOVEMBER 23-25, 1979. THIS IS AN INFRACTION.
(7938 INFRACTION)

AS REQUIRED BY 10 CFR 50, APPENDIX B, CRITERION V, "ACTIVITIES AFFECTING QUALITY SHALL BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS, PROCEDURES, OR DRAWINGS, OF A TYPE APPROPRIATE TO THE CIRCUMSTANCES AND SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THESE INSTRUCTIONS, PROCEDURES OR DRAWINGS". TENNESSEE VALLEY AUTHORITY'S MEMORANDUM DATED OCTOBER 4, 1979 ENTITLED, "PROGRAM TO RESOLVE NRC IE BULLETIN 79-14", STATES IN PART "ALL DISCREPANCIES NOT RESOLVED BY THE EN DES ENGINEER AT THE SITE WILL BE CALLED INTO THE EN DES COORDINATOR (CEB)" AND THE GUIDELINE USED FOR IMPLEMENTATION OF NRC IE BULLETIN 79-14 STATES IN PART "NOTIFY EN DES PROMPTLY REGARDING ALL POSSIBLE NON-CONFORMANCES". CONTRARY TO THE ABOVE, THE FOLLOWING DISCREPANCIES WERE NOT REPORTED TO "EN DES" FOR PROPER EVALUATIONS: 1. THREE HANGERS IN THE RCIC SYSTEM UNIT 3 WERE IDENTIFIED TO HAVE DISCREPANCIES WITH A SIMILAR INSTALLATION IN UNIT 2. THESE DISCREPANCIES WERE NOT REPORTED TO EN DES AND UNIT 2 HANGERS WERE NOT INSPECTED. 2. A HORIZONTAL SUPPORT WAS IDENTIFIED ON A 6" LINE OF RCIC SYSTEM IN UNIT 1 WHICH DID NOT APPEAR ON THE HANGER DRAWING. THIS DISCREPANCY WAS NOT IDENTIFIED TO EN DES AND THE SUPPORT WAS NOT PART OF THE ORIGINAL AS-DESIGNED ANALYSIS.
(7942 INFRACTION)

* INSPECTION REPORT NO: 50-296/80-05

SUMMARY

INSPECTION SUMMARY

* INSPECTION NOVEMBER 27 - DECEMBER 7 (79-46): THIS ROUTINE INSPECTION INVOLVED 15 RESIDENT INSPECTOR-HOURS IN THE AREAS OF PLANT OPERATIONS, PLANT TOURS, REPORTABLE OCCURRENCES, REFUELING, MAINTENANCE, PLANT PHYSICAL PROTECTION, TRAINING AND RADIATION AREA CONTROLS. OF THE EIGHT AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-021/ 03L-0	12/08/79	12/21/79	30 DAY LER	CONTAINMENT DIFFERENTIAL PRESSURE LESS THAN 1.3 PSIG.
79-021/ 01T-0	12/08/79	12/19/79	14 DAY LER	PRIMARY CONTAINMENT INTEGRITY DEGRADED.
79-022/ 03L-0	12/08/79	01/04/80	30 DAY LER	UNABLE TO MAINTAIN PRIMARY CONTAINMENT DIFFERENTIAL PRESSURE - EQUIPMENT HATCH LEAKING.
79-023/ 03L-0	12/02/79	12/31/79	30 DAY LER	DIESEL GENERATOR TRIPPED ON TEST.
79-024/ 03L-0	12/08/79	01/07/80	30 DAY LER	DRYWELL EQUIPMENT HATCH EXCESSIVE LOCAL LEAKAGE.
79-025/ 03L-0	12/12/79	01/10/80	30 DAY LER	REACTOR CORE ISOLATION COOLING FLOW LOW.
79-026/ 03L-0	12/07/79	01/04/80	30 DAY LER	REACTOR CORE ISOLATION COOLING FAILED TO PRODUCE RATED FLOW.
79-027/ 03L-0	12/16/79	01/15/80	30 DAY LER	AVERAGE POWER RANGE MONITOR SETPOINT DRIFT.
79-028/ 03L-0	12/18/79	01/15/80	30 DAY LER	REACTOR PRESSURE SWITCH SETPOINT DRIFT.

INSPECTION DECEMBER 10-14 (79-45): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED 68 INSPECTOR-HOURS ON SITE IN THE AREAS OF UNIT 3 CONTAINMENT INTEGRITY FOLLOWING THE DECEMBER 6, 1979, STARTUP, PLANT TOURS AND PLANT OPERATIONS REVIEW COMMITTEE (PORC) MEETING. OF THE THREE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; THREE APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN ONE AREA (VIOLATION - FAILURE TO CONTROL ACTIVITIES THAT INVOLVE SAFETY AS EVIDENCED BY LOSS OF PRIMARY CONTAINMENT INTEGRITY; VIOLATION - FAILURE TO SHUT DOWN THE REACTOR AFTER NOT MEETING A LIMITING CONDITION FOR OPERATION (LCO); INFRACTION - FAILURE TO MAKE TIMELY NOTIFICATION TO THE NRC OF AN EVENT REQUIRING PROMPT NOTIFICATION).

INSPECTION NOVEMBER 26-27 (79-42): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED 4 INSPECTOR-HOURS ON SITE IN THE AREA OF SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS (IE BULLETIN 79-14). OF THE ONE AREA INSPECTED, ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO TAKE CORRECTIVE ACTION).

INSPECTION OCTOBER 15 - NOVEMBER 9 (79-39): THIS ROUTINE INSPECTION INVOLVED 29 RESIDENT INSPECTOR-HOURS IN THE AREAS OF PLANT OPERATIONS, PLANT TOURS, REPORTABLE OCCURRENCES, REFUELING, MAINTENANCE, PLANT PHYSICAL PROTECTION AND RADIATION AREA CONTROLS. OF THE SIX AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION NOVEMBER 19-23 (79-38): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 72 INSPECTOR-HOURS ON SITE IN THE AREAS OF WITNESSING PREPARATIONS AND PERFORMANCE OF THE CONTAINMENT INTEGRATED LEAK RATE TEST AND LOCAL LEAK RATE TESTING, DRYWELL INSPECTION OF HYDRAULIC SHOCK ARRESTORS, FOLLOWUP ON PREVIOUSLY IDENTIFIED OPEN AND UNRESOLVED ITEMS AND GENERAL INSPECTION IN CERTAIN AREAS OF THE REACTOR BUILDING AND DRYWELL. OF THE FOUR AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN THREE AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - THE USE OF A TEMPORARY CRD HATCH COVER DURING THE INTEGRATED LEAK RATE TEST).

INSPECTION JANUARY 9-11 (80-02): MATERIAL CONTROL AND ACCOUNTING. THE INSPECTION INVOLVED 20 INSPECTOR-HOURS ON SITE BY ONE NRC INSPECTOR AND WAS BEGUN DURING REGULAR HOURS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS IN THE ONE AREA EXAMINED.

UNIT SHUTDOWNS/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
112	12/30/79	F	375.3	A	4				INSTALLATION OF OVERHEAD CABLES FROM COOLING TOWERS TRANSFORMERS TO BUS TIE BOARDS CONTINUES.
113	01/17/80	F	14.7	A	3				DURING TESTING NO. 2 STOP VALVE CLOSED CAUSING A SPIKE IN REACTOR PRESSURE.
114	01/18/80	F	45.1	A	3				APRM HIGH FLUX WHILE PERFORMING NO. 2 STOP VALVE TEST. UNIT REMAINED DOWN FOR MAINTENANCE TO THE EHC SYSTEM.
115	01/29/80	F	.0	A	5				DERATED FOR "C" REACTOR FEEDWATER PUMP BALANCING (HIGH VIBRATION).

SUMMARY

THE UNIT WAS SHUTDOWN UNTIL 01/15/80 FOR INSTALLATION OF OVERHEAD CABLES FROM COOLING TOWER TRANSFORMERS TO BUS TIE BOARDS. UNIT SCRAMS OCCURRED ON 01/17/80 AND 01/18/80 DUE TO HIGH-HIGH FLUX WHEN REACTOR PRESSURE SPIKED BECAUSE OF CLOSURE OF THE NO. 2 MAIN STEAM STOP VALVE. ON 01/29/80, LOAD WAS REDUCED FOR "C" REACTOR FEEDWATER PUMP BALANCING.

UNIT SHUTDOWNS/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
001	12/25/79	S	106.4	D	4		SH	VALVEX	THE UNIT WAS SEPARATED FROM THE GRID TO INSTALL A SAFETY RELIEF VALVE POSITION INDICATION SYSTEM ON ALL PRIMARY RELIEF VALVES AND FOR A SCHEDULED PIPE SNUBBER INSPECTION. THE OUTAGE WAS EXTENDED DUE TO: (1) A LEAK WAS DISCOVERED ON A REACTOR RECIRC TEST CONNECTION BUSHING. (2) REACTOR VESSEL CHEMISTRY WENT OUT OF SPECIFICATION WHEN ATTEMPTING TO ESTABLISH A CONDENSER VACUUM.
002	01/07/80	F	51.9	A	1		SH	VALVEX	THE UNIT WAS SHUTDOWN BECAUSE OF HIGH TAIL PIPE TEMPERATURE ON SAFETY RELIEF VALVE F013K WHICH INDICATES VALVE LEAKAGE. THE UNIT #2 F013K SAFETY RELIEF VALVE WAS REMOVED FROM THE SYSTEM; ALSO AS A PRECAUTIONARY MEASURE, THE F013A SAFETY RELIEF VALVE WAS REMOVED.

SUMMARY

THE UNIT WAS SHUTDOWN UNTIL 01/04/80 FOR PLANT MODIFICATION TO THE SAFETY RELIEF VALVES. AN OUTAGE ALSO OCCURRED ON 01/07/80 BECAUSE OF LEAKAGE ON SAFETY RELIEF VALVE F013K. OPERATION WAS ROUTINE FOR THE REMAINDER OF THE REPORT PERIOD.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 71.51(A) REQUIRES THAT A LICENSEE "...SHALL ESTABLISH, MAINTAIN AND EXECUTE A QUALITY ASSURANCE PROGRAM SATISFYING EACH OF THE APPLICABLE CRITERIA SPECIFIED IN APPENDIX E, 'QUALITY ASSURANCE CRITERIA FOR SHIPPING PACKAGES FOR RADIOACTIVE MATERIAL'..." IT FURTHER REQUIRES THAT "THE DESCRIPTION OF THE QUALITY ASSURANCE PROGRAM SHALL INCLUDE A DISCUSSION OF WHICH REQUIREMENTS OF APPENDIX E ARE APPLICABLE AND HOW THEY WILL BE SATISFIED," AND THAT "A DESCRIPTION OF THAT PROGRAM SHALL BE FILED, IN ACCORDANCE WITH THIS SECTION, BY JANUARY 1, 1979, WITH THE DIRECTOR, OFFICE OF NUCLEAR MATERIAL SAFETY AND SAFEGUARDS, NUCLEAR REGULATORY COMMISSION, WASHINGTON, D.C. 20555." CONTRARY TO THE ABOVE, NO QUALITY ASSURANCE PROGRAM FOR SHIPPING PACKAGES WAS IN EFFECT AND NO DESCRIPTION OF SUCH A PROGRAM HAD BEEN FILED WITH THE DIRECTOR, NMSS.
(7926 INFRACTION)

PLANT MANAGER INSTRUCTION PMI 4060 REQUIRES THE LICENSEE TO FORWARD ONLY PROPERLY PREPARED, REVIEWED AND APPROVED TECHNICAL DATA FOR ENTRY IN TECHNICAL DATA BOOKS. CONTRARY TO THE ABOVE, THE DIFFERENTIAL BORON WORTH CURVES IN THE TECHNICAL DATA BOOKS HAVE NOT BEEN SCALED UP TO REFLECT THE DISCREPANCY BETWEEN THE PREDICTED AND THE MEASURED DIFFERENTIAL BORON WORTHS.
(7928 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS

+ Plant resumed operation on January 17, 1980.

+LAST IE SITE INSPECTION DATE: December 11-14, 1979

+ INSPECTION REPORT NO: 79-28

SUMMARY

INSPECTION SUMMARY

+ Inspection on October 6 through November 30, (79-24): Review of Operations, Security, Thermal Power Evaluations, Refueling Activities, Procurement, Radiation Protection and Licensee Event Reports (LER's). The inspection involved 134 inspector hours onsite by the NRC Resident Inspector. Of the seven areas inspected, no items of noncompliance were identified.

+ Investigation on November 14-16, (79-25): Six allegations were made that: instructors fired into guards' targets to assist them in obtaining qualifying scores; metal detectors malfunctioned and no alternative procedures were utilized; a waste shipment left the site leaking contamination; personnel who failed the test performed as reactor operators; gaseous radioactive releases were made without NRC being aware; and, a control rod insertion problem may not have been reported to the NRC. The investigation consisted of an examination of records and procedures and interviews with personnel and consisted of 36 investigation hours by two investigators. None of the allegations were substantiated. No items of noncompliance were identified.

+ Inspection on November 19-21, (79-26): Special, announced inspection of radioactive waste systems, including: effluent releases, records and reports of effluents, radioactive waste, response to IE Bulletin 79-19, and followup on previously identified inspection findings. The inspection involved 34 inspector hours onsite by one NRC inspector. There were no items of noncompliance identified in four of the five areas inspected. One item of noncompliance was identified in the area of solid radioactive waste.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-63/ 03L-0	11/27/79	12/27/79	30 Day LER	While operating in Mode 1, both boric acid transfer pumps were made inoperable for a period of four hours and 40 minutes.
79-64/ 03L-0	12/01/79	12/27/79	30 Day LER	During the investigation of a high steam generator level indication, for channel 1 loop 4, transmitter BLP 141 was found to be 13% out of spec. high.
79-65/ 03T-0	12/24/79	01/16/80	14 Day LER	CAR system seismic design deficiencies.
79-66/ 03L-0	12/18/79	01/16/80	30 Day LER	Glycol containment isolation valve, VCR-10, did not close when its control switch was turned to the closed position.
79-67/ 03L-0	12/21/79	01/16/80	30 Day LER	After the APDMS Fz setpoints were updated it was found that two out of the four thimbles used were not the ones with the lowest uncertainty.

==

+ – Investigation on October 31 through November 1, (79-27): Investigation was conducted into allegations of improper welding tests and record falsification at the licensee's D. C. Cook facility. Investigation examined the licensee's welding certification test procedures and a review of records. Investigation involved 32 hours onsite by one inspector and one investigator. Of the areas investigated, no items of noncompliance were identified.

+ = Inspection on December 11-14, (79-28): Routine, announced inspection of shutdown margin determination; isothermal temperature coefficient; power coefficient of reactivity measurement; target axial flux difference; reactivity anomalies. The inspection involved 22 inspector hours onsite by one NRC inspector. Of the five areas inspected, no items of noncompliance or deviations were identified in four areas. One item of noncompliance was identified in one area (failure to update the plant technical data book).

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 6.8.1 REQUIRES IMPLEMENTATION OF PROCEDURES. PMP 6010 RAD.002 STATES IN PART: "EACH 'HIGH RADIATION AREA' DOOR SHALL BE SECURED BY LOCK AND KEY...". CONTRARY TO THE ABOVE, DOOR NO. 370 (TO UNIT 2 CONTAINMENT VESTIBULE AREA) WAS FOUND PROPPED OPEN BY AN ARGON PURGE HOSE BEING USED FOR WELDING IN THE VESTIBULE AREA. THE DOOR WAS UNGUARDED AND UNCONTROLLED.
(7921 INFRACTION)

TECHNICAL SPECIFICATION 6.8.1 REQUIRES IMPLEMENTATION OF PROCEDURES. PMI-2275 STATES IN PART: "THE 'WELDING, BURNING AND GRINDING PERMIT' SHALL BE COMPLETED IN DUPLICATE. AFTER CONCURRENCE BY THE SOE...ONE COPY SHALL BE POSTED IN THE WORK AREA." CONTRARY TO THE ABOVE, THE WELDING JOB REFERENCED IN NO. 1 ABOVE HAD NO EVIDENCE OF AN ACTIVE WELDING PERMIT AT OR NEAR THE WORK AREA.
(7921 INFRACTION)

10 CFR 71.51(A) REQUIRES THAT A LICENSEE "...SHALL ESTABLISH, MAINTAIN AND EXECUTE A QUALITY ASSURANCE PROGRAM SATISFYING EACH OF THE APPLICABLE CRITERIA SPECIFIED IN APPENDIX E, 'QUALITY ASSURANCE CRITERIA FOR SHIPPING PACKAGES FOR RADIOACTIVE MATERIAL'..." IT FURTHER REQUIRES THAT "THE DESCRIPTION OF THE QUALITY ASSURANCE PROGRAM SHALL INCLUDE A DISCUSSION OF WHICH REQUIREMENTS OF APPENDIX E ARE APPLICABLE AND HOW THEY WILL BE SATISFIED." AND THAT "A DESCRIPTION OF THAT PROGRAM SHALL BE FILED, IN ACCORDANCE WITH THIS SECTION, BY JANUARY 1, 1979, WITH THE DIRECTOR, OFFICE OF NUCLEAR MATERIAL SAFETY AND SAFEGUARDS, NUCLEAR REGULATORY COMMISSION, WASHINGTON, D.C. 20555." CONTRARY TO THE ABOVE, NO QUALITY ASSURANCE PROGRAM FOR SHIPPING PACKAGES WAS IN EFFECT AND NO DESCRIPTION OF SUCH A PROGRAM HAD BEEN FILED WITH THE DIRECTOR, NMSS.
(7924 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS

+ Plant resumed operation on January 17, 1980.

+LAST IE SITE INSPECTION DATE: October 31 through November 1, 1979

+ INSPECTION REPORT NO: 79-25

SUMMARY

INSPECTION SUMMARY

+ Inspection on October 6 through November 30, (79-21): Review of Operations, Security, Thermal Power Evaluations, Refueling Activities, Procurement, Radiation Protection and Licensee Event Reports (LER's). The inspection involved 134 inspector hours onsite by the NRC Resident Inspector. Of the seven areas inspected, no items of noncompliance were identified in six. In the Operations area, two items of noncompliance were identified as follows: Control of "High Radiation Area" doors and control of ignition sources.

+ Investigation on November 14-16, (79-23): Six allegations were made that: instructors fired into guards' targets to assist them in obtaining qualifying scores; metal detectors malfunctioned and no alternative procedures were utilized; a waste shipment left the site leaking contamination; personnel who failed the test performed as reactor operators; gaseous radioactive releases were made without NRC being aware; and, a control rod insertion problem may not have been reported to the NRC. The investigation consisted of an examination of records and procedures and interviews with personnel and consisted of 36 investigation hours by two investigators. None of the allegations were substantiated. No items of noncompliance were identified.

+ Inspection on November 19-21, (79-24): Special, announced inspection of radioactive waste systems, including: effluent releases, records and reports of effluents, radioactive waste, response to IE Bulletin 79-19, and followup on previously identified inspection findings. The inspection involved 34 inspector hours onsite by one NRC inspector. There were no items of noncompliance identified in four of the five areas inspected. One item of noncompliance was identified in the area of solid radioactive waste.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-45/ 03L-0	11/13/79	12/12/79	30 Day LER	During refueling the bonnet was removed from a 2 inch hand valve on the blowdown line from No. 2 steam generator while the 1 inch radiographic plug was removed from an elbow in the feedwater line to that steam generator.
79-46/ 03L-0	11/19/79	12/19/79	30 Day LER	With refueling in progress source range neutron flux monitor (N-31) became erratic and was declared inoperable.
79-47/ 03L-0	11/24/79	12/19/79	30 Day LER	During the calibration of grid degraded voltage relays, relay No. 27-1-201-AB dropped out at a value corresponding to 21.9KV.
79-48/ 03L-0	12/01/79	12/27/79	30 Day LER	While in mode 6, with refueling complete, gaseous sample pump tripped.
79-49/ 01T-0	12/18/79	12/31/79	14 Day LER	Significant as-built discrepancy in 1 inch primary coolant piping - IEB 79-14 evaluation.
79-50/ 01T-0	12/17/79	01/11/80	14 Day LER	Items of noncompliance identified during the inspection/evaluation of IEB 79-14.
79-51/ 03L-0	12/17/79	01/16/80	30 Day LER	With reactor in Mode 5 during TS 4.3.2.1.2 containment spray pump discharge valve IMO-220 failed to open.
79-52/ 03L-0	12/18/79	01/16/80	30 Day LER	While in mode 5, source range indication was inoperable for a period of 23 min. this is non-conservative in respect to TS table 3.3-1 Item 6.b.
79-53/ 03L-0	12/26/79	01/17/80	30 Day LER	While performing the type B&C leak test several valves exhibited excessive leakage causing the total as found leak rate to exceed the limit in TS 3.6.1.2.b.
79-54/ 03L-0	12/26/79	01/22/80	30 Day LER	Four relay timers were found to have exceeded the tolerance allowed by TS 4.8.1.1.2.C.2.

+ Investigation on October 31 through November 1, (79-25): Investigation was conducted into allegations of improper welding tests and record falsification at the licensee's D. C. Cook facility. Investigation examined the licensee's welding certification test procedures and a review of records. Investigation involved 32 hours onsite by one inspector and one investigator. Of the areas investigated, no items of noncompliance were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.1.A, WRITTEN PROCEDURES SHALL BE IMPLEMENTED COVERING THE AREA OF EQUIPMENT CONTROL. COMPLIANCE PROCEDURE CP-115 IMPLEMENTS THIS REQUIREMENT AND REQUTRES INDEPENDENT VERIFICATION OF SAFETY RELATED VALVE POSITIONS UPON SYSTEM RESTORATION FOLLOWING MAINTENANCE. CONTRARY TO THE ABOVE EQUIPMENT CLEARANCE NUMBER 10-48 WAS RELEASED ON OCTOBER 22, 1979 WITHOUT HAVING PERFORMED AN INDEPENDENT VERIFICATION OF THE REQUIRED POSITIONS OF ALL VALVES IN THE NUCLEAR SERVICES CLOSED CYCLE COOLING SYSTEM, WITHIN THE BOUNDARIES OF THE CLEARANCE.
(7946 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.1 WRITTEN PROCEDURES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED. PROCEDURE AI-800 "CONDUCT OF ADMINISTRATIVE SERVICES," SECTION 7.4.5 REQUIRES MEMBERS OF THE EMERGENCY MEDICAL TEAM TO RECEIVE ANNUAL TRAINING. CONTRARY TO THE ABOVE ALL MEMBERS OF EMERGENCY MEDICAL TEAM ARE DEFICIENT IN FIRST-AID TRAINING. ANNUAL TRAINING FOR SHIFT SUPERVISORS NOT RECEIVED DURING YEAR 1979.
(7950 INFRACTION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.1 WRITTEN PROCEDURES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED. PROCEDURE AI-800 "CONDUCT OF ADMINISTRATIVE SERVICES," SECTION 7.4.5 REQUIRES MEMBERS OF THE EMERGENCY MEDICAL TEAM TO RECEIVE ANNUAL TRAINING. CONTRARY TO THE ABOVE ALL MEMBERS OF EMERGENCY MEDICAL TEAM ARE DEFICIENT IN FIRST-AID TRAINING. ANNUAL TRAINING FOR SHIFT SUPERVISORS NOT RECEIVED DURING YEAR 1979.
(7950 INFRACTION)

BRANCH TECHNICAL POSITION APCSB9.5-1, APPENDIX A, SECTION C.6 REQUIRES IN PART THAT "FIVE EXTINGUISHERS SHOULD BE PROVIDED IN ACCORDANCE WITH GUIDELINES OF NFPA 10 AND 10A. THE FIRE PROTECTION PROGRAM REVIEW, CRYSTAL RIVER 3 DATED JUNE 1977 SECTION 6.E.6 STATES IN PART THAT THE REQUIREMENTS IS MET. FIVE EXTINGUISHERS ARE PROVIDED IN ACCORDANCE WITH NFPA-10. CONTRARY TO THE ABOVE SURVEILLANCE PROCEDURES FOR PORTABLE FIVE EXTINGUISHERS DO NOT REFERENCE NFPA 10 AND DO NOT CONTAIN ALL THE CHECKS AND ACCEPTANCE CRITERIA USED IN NFPA 10.
(7952 DEVIATION)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.12.1.B, AREAS WITH RADIATION LEVELS EXCEEDING 1000 MREM/HR MUST BE PROVIDED WITH DOORS LOCKED TO PREVENT UNAUTHORIZED ENTRY. CONTRARY TO THE ABOVE: (1) ON DECEMBER 17, 1979 THE DOOR TO THE SPENT RESIN TRANSFER PUMP AREA WAS NOT CLOSED. THIS PROVIDED ACCESS TO THE SPENT RESIN CATCH TANK THRU A CRAWL WAY. RADIATION LEVELS IN THE CRAWL WAY WERE MEASURED AT 2000 MREM/HR; AND (2) ON DECEMBER 17, 1979 DOORS CONTROLLING ACCESS TO THE EVAPORATOR CONDENSATE DEMINERALIZER AREA AND THE MAKE UP PREFILTER AREA WERE INADEQUATE TO PREVENT UNAUTHORIZED ENTRY. THE LOCK MECHANISMS COULD BE EASILY DEFEATED TO GAIN ACCESS TO THESE AREAS. SURVEYS CONDUCTED ON DECEMBER 19 INDICATED GENERAL AREA RADIATION LEVELS OF 1500 MREM/HR (MAKE UP PREFILTER AREA) AND 2500 MREM/HR (DEMINERALIZER AREA).
(7954 INFRACTION)

AS REQUIRED BY 10 CFR 20.203(E), AREAS WHERE RADIOACTIVE MATERIALS IN EXCESS OF 10 TIMES 10 CFR 20 APPENDIX C QUANTITIES ARE STORED MUST BE POSTED WITH A SIGN OR SIGNS BEARING THE RADIATION CAUTION SYMBOL AND THE WORDS: CAUTION, RADIOACTIVE MATERIAL(S). ALSO, AS REQUIRED BY 10 CFR 20.203(E), CONTAINERS CONTAINING RADIOACTIVE MATERIALS IN EXCESS OF 10 CFR 20 APPENDIX C QUANTITIES MUST HAVE A LABEL IDENTIFYING THE RADIOACTIVE CONTENTS. THIS LABEL MUST BEAR THE RADIATION CAUTION SYMBOL, THE WORDS: "DANGER, RADIOACTIVE MATERIAL," OR "CAUTION, RADIOACTIVE MATERIAL" AND MUST PROVIDE SUFFICIENT INFORMATION TO PERMIT INDIVIDUALS HANDLING OR USING THE CONTAINERS, OR WORKING IN THE VICINITY THEREOF, TO TAKE PRECAUTIONS TO AVOID OR MINIMIZE EXPOSURES. CONTRARY TO THE ABOVE, ON DECEMBER 17, 1979, APPROXIMATELY 50 BAGS OF CONTAMINATED WASTE AWAITING COMPACTION AND SHIPMENT AS RADIOACTIVE WASTE WERE IN A HOLDING AREA. THESE BAGS HAD NO TAG AFFIXED TO INDICATE CONTAMINATION OR RADIATION LEVELS. QUANTITIES OF RADIOACTIVE MATERIAL IN EXCESS OF APPENDIX C QUANTITIES WERE PRESENT.
(7954 DEFICIENCY)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8, PROCEDURES ADDRESSING AREAS OUTLINED IN REGULATORY GUIDE 1.33 (1972), QUALITY ASSURANCE PROGRAM REQUIREMENTS, APPENDIX A, MUST BE FOLLOWED. SECTION I.5, APPENDIX A REQUIRES PROCEDURES FOR CONTROL OF MODIFICATIONS. FACILITY COMPLIANCE PROCEDURE CP-114, "PROCEDURE FOR PREPARATION AND CONTROL OF PERMANENT MODIFICATIONS, TEMPORARY MODIFICATIONS, DEVIATIONS, AND MAR FUNCTIONAL TEST PROCEDURES" IMPLEMENTS THIS REQUIREMENT. CP-114, SECTION 1.1 STATES, "ANY CHANGE FROM ORIGINAL DESIGN REQUIREMENTS IS A MODIFICATION AND MUST BE CONTROLLED AND RECEIVE DESIGN REVIEW EQUIVALENT TO THAT IMPOSED ON THE ORIGINAL DESIGN." CONTRARY TO THE ABOVE, ON DECEMBER 18, 1979, SIX LEAD BLANKETS, (ABOUT 30 POUNDS EACH) WERE FOUND ON MAKE UP SYSTEM PIPING NEAR VALVE MOV-305 WITH NO ANALYSIS OR CONTROL OVER THE AMOUNT OF LEAD INSTALLED AND ITS EFFECT ON THE SEISMIC QUALIFICATION OF THE SYSTEM. THIS PIPING IS A SEISMIC 1 SAFETY SYSTEM.
(7954 INFRACTION)

PLANT STATUS:

NORMAL OPERATION AT 100% POWER - NO APPARENT MAJOR PROBLEMS.

* LAST IE SITE INSPECTION DATE: FEBRUARY 4-8, 1980

* INSPECTION REPORT NO: 50-302/80-05
SUMMARY

INSPECTION SUMMARY

* INSPECTION OCTOBER 29 - NOVEMBER 2 (79-46): THIS ROUTINE, UNANNOUNCED
INSPECTION INVOLVED 32 INSPECTOR-HOURS ONSITE IN THE AREAS OF REVIEW
OF OPERATIONS, REVIEW OF IE BULLETINS AND CIRCULARS, FOLLOWUP ON PRE-
VIOUSLY IDENTIFIED ITEMS, AND A PLANT TOUR. OF THE FOUR AREAS INSPECTED,
NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN THREE AREAS;
ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE
TO PERFORM INDEPENDENT VERIFICATION OF SAFETY-RELATED VALVE POSITIONS
FOLLOWING MAINTENANCE).

INSPECTION DECEMBER 3-7 (79-50): THIS ROUTINE, ANNOUNCED INSPECTION
INVOLVED 94 INSPECTOR-HOURS ON SITE AND OFFSITE IN THE AREAS OF
COORDINATION WITH OFFSITE SUPPORT AGENCIES; EMERGENCY FACILITIES,
EQUIPMENT AND PROCEDURES; MEANS FOR DETERMINING A RELEASE; EMERGENCY
TRAINING; FIRE BRIGADE ORGANIZATION AND TRAINING; EMERGENCY ORGANIZA-
TION; IE BULLETIN 79-18; EMERGENCY DRILLS; LICENSEE QA AUDITS AND
FOLLOWUP ON PREVIOUS INSPECTION FINDINGS. OF THE TEN AREAS INSPECTED,
NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN NINE AREAS;
ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (FAILURE TO
MAINTAIN TRAINING PROGRAM AS REQUIRED BY ADMINISTRATIVE PROCEDURE A.I.
800).

INSPECTION NOVEMBER 26-29 (79-52): THIS ROUTINE, UNANNOUNCED INSPECTION
INVOLVED 28 INSPECTOR-HOURS ON SITE IN THE AREAS OF PORTABLE FIRE EXTIN-
GUISHER SURVEILLANCE AND COMPLIANCE WITH LIMITING CONDITIONS FOR OPERATION.
OF THE TWO AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIA-
TIONS WERE IDENTIFIED IN ONE AREA; ONE APPARENT DEVIATION WAS FOUND IN
ONE AREA (DEVIATION - PORTABLE FIRE EXTINGUISHER SURVEILLANCE PROCEDURES
DO NOT FOLLOW NFPA-10).

INSPECTION DECEMBER 3-7 (79-53): THIS ROUTINE, ANNOUNCED INSPECTION
INVOLVED 31 INSPECTOR-HOURS ON SITE IN THE AREAS OF OPERATIONS REVIEW
AND OPEN ITEMS. OF THE TWO AREAS INSPECTED, NO APPARENT ITEMS OF
NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 17-19 (79-54): THIS ROUTINE, UNANNOUNCED INSPECTION
INVOLVED 50 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIOACTIVE MATERIAL
TRANSPORTATION, HIGH RADIATION AREA CONTROL, AND CONTAMINATED MATERIAL
CONTROLS AND FACILITY TOURS. OF THE FOUR AREAS INSPECTED, NO APPARENT
ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; THREE
APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN THREE AREAS (INFRACTION -
FAILURE TO LOCK OR ADEQUATELY LOCK HIGH RADIATION AREAS; INFRACTION -
FAILURE TO REVIEW SEISMIC EFFECTS OF LEAD SHIELDING OF MAKE UP SYSTEM
PIPING; DEFICIENCY - POSTING AND LABELING OF CONTAMINATED MATERIAL).

UNIT SHUTDOWNS/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
80-1	01/05/80	S	14.6	B	1		CB	PUMPXX	SHUTDOWN TO RESTORE RCP OIL LEVEL. NO LEAKS OR PROBLEMS WERE DISCOVERED.
80-2	01/07/80	F	4.0	B	5		CH	PUMPXX	REDUCED POWER TO 46% FP TO REPAIR A FWP OIL LEAK.
80-3	01/11/80	S	38.0	B	5		HC	HTEXCH	REDUCED POWER TO 80% FOR CONDENSER WATERBOX CLEANING.
80-4	01/17/80	F	4.0	B	5		CC	VALVEX	REDUCED POWER TO 65% FOR REPAIR OF A THROTTLE VALVE.
80-5	01/19/80	F	11.3	A	5		HH	INSTRU	REDUCED POWER TO 95% DUE TO LEVEL PROBLEMS WITH FWHE 5A. THE LEVEL PROBLEMS WERE CAUSED BY A MISCALIBRATED TRANSMITTER. THE LINE WAS BLOWN DOWN AND THE TRANSMITTER RECALIBRATED.

SUMMARY

OPERATION WAS AT NEAR FULL POWER DURING THE REPORT PERIOD EXCEPT FOR AN OUTAGE ON 01/05/80 TO RESTORE REACTOR COOLANT PUMP OIL LEVEL. BRIEF REDUCTIONS WERE NECESSARY TO CLEAN CONDENSER WATERBOXES, REPAIR A THROTTLE VALVE AND A FEEDWATER PUMP OIL LEAK, AND INVESTIGATE PROBLEMS WITH THE 5A FEEDWATER HEATER.

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 3.4.1.A, REQUIRES THAT IN MODES 1 AND 2, WITH ONE REACTOR COOLANT PUMP NOT IN OPERATION, STARTUP AND POWER OPERATION MAY BE INITIATED AND MAY PROCEED PROVIDED THERMAL POWER IS RESTRICTED TO LESS THAN 78.3% OF RATED THERMAL POWER AND WITHIN 4 HOURS THE SETPOINTS FOR THE FOLLOWING TRIPS HAVE BEEN REDUCED TO THE VALUES SPECIFIED IN SPECIFICATION 2.2.1 FOR OPERATION WITH THREE REACTOR COOLANT PUMPS OPERATING: (1) HIGH FLUX AND (2) FLUX-FLUX-FLOW. THE SURVEILLANCE PORTION OF THAT SPECIFICATION REQUIRES THAT THE REACTOR PROTECTIVE INSTRUMENTATION CHANNELS SPECIFIED BE VERIFIED TO HAVE HAD THEIR TRIP SETPOINTS CHANGED TO THE VALUES SPECIFIED IN SPECIFICATION 2.2.1 FOR THE APPLICABLE NUMBER OF REACTOR COOLANT PUMPS OPERATING...: (A) WITHIN 4 HOURS AFTER SWITCHING TO A DIFFERENT PUMP COMBINATION IF THE SWITCH IS MADE WHILE OPERATING. CONTRARY TO THE ABOVE ON NOVEMBER 26, 1979, WHILE IN MODE 1, REACTOR COOLANT PUMP 1-2 WAS TRIPPED AND THE HIGH FLUX TRIP SETPOINT WAS NOT CHANGED TO THE VALUE SPECIFIED IN TABLE 2.2.1 WITHIN 4 HOURS AFTER THE CHANGE TO 3 RCP OPERATION. THE FLUX-FLUX-FLOW TRIP SETPOINT WAS NOT VERIFIED TO HAVE ITS SETPOINT CHANGED TO THE VALUE SPECIFIED IN TS 2.2.1 WITHIN 4 HOURS AFTER THE CHANGE TO 3 RCP OPERATION.
(7929 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS

- Routine operation since return to operation on January 7, 1980 from the December outage to repair and replace hot leg RTD's.

+LAST IE SITE INSPECTION DATE: October 15-20; November 1-2, 15-16 and 28, 1979

- INSPECTION REPORT NO: 79-32

SUMMARY

INSPECTION SUMMARY

- Inspection on November 1-2, 5-10, 12-16, 19-21 and 26-30, (79-29): A routine, unannounced inspection of followup of previous inspection findings, plant operations, physical protection (security organization, physical barriers, access control, communications), followup of licensee event reports, followup of IE Bulletins and NRR generic letter on Containment Purging. The inspection involved 140 inspector hours onsite by the Resident Inspector. Of the nine areas inspected, no items of noncompliance or deviations were found in eight areas; one item of apparent noncompliance was identified in the other area (failure to verify change in High Flux and Flux-Flux-Flow trip setpoints).

- Inspection on October 15-20; November 1-2, 15-16 and 28, (79-32): Special, unannounced inspection associated with the reactor trip and subsequent loss of offsite power that occurred October 15, 1979; followup on corrective action and the tripping of a reactor coolant pump on October 25, 1979. The inspection involved 153 inspector hours onsite by four NRC inspectors. An Immediate Action Letter was issued October 17, 1979 confirming corrective action on five equipment problems prior to the unit startup. No items of noncompliance were identified.

+LAST IE SITE INSPECTION DATE: November 5 through December 4, 1979

+ INSPECTION REPORT NO: 79-28

SUMMARY

INSPECTION SUMMARY

- Inspection on September 26-27; October 3-4, 22-23 and November 7-9, (79-22): Follow up to IE Bulletin No. 79-02, pipe support base plate designs using concrete expansion anchor bolts; review of test program and procedures; observation of testing anchor bolts; and review of quality records. The inspection involved 68 inspector hours onsite by one NRC inspector. No items of noncompliance were identified in the areas inspected.
- Inspection on November 5 through December 4, (79-28): Routine, unannounced inspection of plant operations; physical protection - security organization, physical barriers, access control (identification, authorization, badging, search, and escorting), and communications; and, corporate management meeting. The inspection involved 53 inspector hours onsite by one NRC inspector and three manhours at the corporate office during a management meeting by three NRC personnel. No items of noncompliance were identified.

+        INSPECTION REPORT NO:  79-31

    SUMMARY

    INSPECTION SUMMARY

+   Inspection on December 18-20, (79-31):  Routine, unannounced inspection of
    Emergency Planning, including licensee internal audits; discussions with
    offsite support agencies; review of emergency facilities, equipment,
    instrumentation, and supplies specified in the Preparedness Plan and
    associated procedures; review of training of emergency personnel; review
    records of emergency exercises; and review of Environmental Technical
    Specification Violation 79-02.  The inspection involved 18 inspector hours
    onsite by one NRC inspector.  Of the seven areas inspected, no items of
    noncompliance or deviations were identified in six areas; one apparent item
    of noncompliance (excessive chlorine discharge) was identified in one area.

ROUTINE OPERATIONS

LAST IE SITE INSPECTION DATE: JANUARY 1-31, 1980

INSPECTION REPORT NO: 50-348/80-01

SUMMARY

INSPECTION SUMMARY

INSPECTION DECEMBER 12-14 (79-39): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 18 INSPECTOR-HOURS ON SITE IN THE AREAS OF REVIEW OF PREOPERATIONAL TESTING ACTIVITIES ON UNIT 2 AND GENERAL SITE FAMILIARIZATION. OF THE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 10-14 (79-41): INCLUDED REVIEW OF SECURITY PLAN, SECURITY PROGRAM AUDIT, SECURITY ORGANIZATION, PROTECTED AND VITAL AREA PHYSICAL BARRIERS, LIGHTING, ACCESS CONTROLS, DETECTION AIDS, ASSESSMENT AIDS, COMMUNICATIONS, TESTING AND MAINTENANCE, COMPENSATORY MEASURES, RESPONSE, LOCKS/KEYS, TESTING/MAINTENANCE AND LICENSEE ACTION ON PREVIOUS INSPECTION FINDINGS. THE INSPECTION INVOLVED 36 INSPECTOR-HOURS ON SITE BY 1 NRC INSPECTOR. THE INSPECTION WAS BEGUN DURING AN OFFSHIFT PERIOD; 6 INSPECTION HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE AREAS EXAMINED DURING THE INSPECTION EXCEPT FOR THE FOLLOWING ITEMS: TESTING AND MAINTENANCE - ONE INTRUSION ALARM TEST WAS NOT CONDUCTED DURING THE PERIOD EXAMINED (DEFICIENCY 79-41-01).

INSPECTION DECEMBER 5-7 (79-43): THIS ROUTINE UNANNOUNCED INSPECTION INVOLVED 16 INSPECTOR-HOURS ON SITE IN THE AREAS OF ASME CERTIFICATIONS, QA MECHANICAL AUDITS, CDR'S, LER'S, UNRESOLVED ITEMS AND INSPECTOR FOLLOWUP ITEMS. OF THE SEVEN AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 19-21 (79-44): MATERIAL CONTROL AND ACCOUNTING. THE INSPECTION INVOLVED 18 INSPECTOR-HOURS ON SITE BY ONE NRC INSPECTOR AND WAS BEGUN DURING THE REGULAR HOURS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS IN THE ONE AREA EXAMINED.

INSPECTION DECEMBER 3-29 (79-45): THIS ROUTINE, INSPECTION INVOLVED 96 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, UNIT NO. 2 PREOPERATIONAL STARTUP TEST PROGRAM, PHYSICAL SECURITY AND OPEN ITEMS. OF THE FOUR AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 27 (79-46): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED THREE INSPECTOR-HOURS ON SITE IN THE AREAS AND ACTIVITIES RELATIVE TO IE BULLETIN 79-17 (PIPE CRACKS IN STAGNANT BORATED WATER SYSTEMS AT PWR PLANTS). NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

UNIT SHUTDOWNS/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
001	01/04/80	F	2.0	B	5		HH	PUMPXX	UNIT WAS REDUCED TO 35% REACTOR POWER IN ORDER TO REMOVE ONE OF THE TWO OPERABLE CONDENSATE PUMPS FROM SERVICE FOR MAINTENANCE.
002	01/04/80	F	73.0	B	5		HH	PUMPXX	UNIT WAS LIMITED TO 57% REACTOR POWER WITH ONLY ONE OPERABLE CONDENSATE PUMP AVAILABLE FOR SERVICE.
003	01/12/80	S	2.7	B	5		HA	VALVEX	UNIT WAS REDUCED TO 90% REACTOR POWER TO PERFORM TURBINE GOVERNOR VALVE SURVEILLANCE TESTING.
004	01/19/80	S	2.4	B	5		HA	VALVEX	UNIT WAS REDUCED TO 90% REACTOR POWER TO PERFORM TURBINE GOVERNOR VALVE SURVEILLANCE TESTING.
005	01/21/80	F	26.5	B	1		CI	ZZZZZZ	UNIT WAS TAKEN OFF-LINE TO INVESTIGATE IDENTIFIED REACTOR COOLANT SYSTEM LEAKAGE. DRAIN VALVE LEAKAGE WAS LOCATED AND TERMINATED.
006	01/22/80	F	7.4	B	3		HH	CKTBRK	UNIT TRIPPED DUE TO LOSS OF 1B SGFP ON A REVERSE THRUST BEARING TRIP CAUSED WHILE TROUBLESHOOTING BREAKER TRIP INDICATION FOR 1B SGFP TURNING GEAR MOTOR.
007	01/26/80	S	2.3	B	5		HA	VALVEX	UNIT WAS REDUCED TO 90% REACTOR POWER TO PERFORM TURBINE GOVERNOR VALVE SURVEILLANCE TESTING.
008	01/27/80	F	12.0	A	3		HH	PIPEXX	UNIT TRIPPED DUE TO LOSS OF BOTH SGFP'S ON LOW SUCTION PRESSURE. THE INSTRUMENT AIR LINE TO SGFP 1A MINI-FLOW VALVES TO FAIL OPEN. THE FAILED SECTION OF LINE WAS REPLACED AND THE UNIT RETURNED ON LINE.
009	01/28/80	F	12.6	A	5		AA	BLOWER	UNIT WAS REDUCED TO 65% REACTOR POWER, THEN LIMITED TO 85% REACTOR POWER TO MAINTAIN THE ISOPHASE BUS COOLING SYSTEM BELOW 170 DEG. F. DUE TO THE LOSS OF AN ISOPHASE BUS DUCT COOLING FAN.
010	01/30/80	S	1.0	B	5		HA	VALVEX	UNIT WAS REDUCED TO 90% REACTOR POWER TO SWITCH FROM MANUAL TO AUTO. CONTROL OF THE TURBINE GOVERNOR VALVES FOLLOWING STEAM GENERATOR MOISTURE CARRYOVER TESTING.
011	01/31/80	S	2.0	F	1		ZZ	ZZZZZZ	UNIT WAS SHUTDOWN TO PERFORM NUREG 0578 RELATED DESIGN CHANGES.

SUMMARY

THE UNIT EXPERIENCED SEVERAL POWER REDUCTIONS DURING THE REPORT PERIOD, FOR MAINTENANCE ON CONDENSATE PUMPS, TURBINE GOVERNOR VALVE SURVEILLANCE TESTING, AND DUE TO LOSS OF AN ISOPHASE BUS DUCT COOLING FAN. OUTAGES OCCURRED FOR INVESTIGATION OF REACTOR COOLANT SYSTEM LEAKAGE, WITH TRIPS WHILE TROUBLESHOOTING A BREAKER TRIP INDICATION AND FROM LOSS OF BOTH STEAM GENERATOR FEED PUMPS ON LOW SUCTION PRESSURE, AND TO PERFORM NUREG-0578 RELATED DESIGN CHANGES.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50.59 STATES, IN PART, "THE LICENSEE SHALL MAINTAIN RECORDS OF CHANGES IN THE FACILITY.... THESE RECORDS SHALL INCLUDE A WRITTEN SAFETY EVALUATION.... THE LICENSEE SHALL FURNISH TO THE APPROPRIATE NRC REGIONAL OFFICE...ANNUALLY...A BRIEF DESCRIPTION OF...CHANGES...INCLUDING A SUMMARY OF THE SAFETY EVALUATION OF EACH." CONTRARY TO THE ABOVE, THE LICENSEE DID NOT SUBMIT A REPORT OF CHANGES TO THE FACILITY INCLUDING A BRIEF SUMMARY OF THEIR SAFETY EVALUTIONS FOR THE MODIFICATIONS COMPLETED DURING 1978.
(7913 DEFICIENCY)

10 CFR 50, APPENDIX B, CRITERION V, INSTRUCTION, PROCEDURES, AND DRAWINGS, STATES, IN PART, "ACTIVITIES AFFECTING QUALITY SHALL BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS, PROCEDURES, AND DRAWINGS, OF A TYPE APPROPRIATE TO THE CIRCUMSTANCES AND SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THESE INSTRUCTIONS, PROCEDURES, AND DRAWINGS." THE QUALITY ASSURANCE PROGRAM MANUAL, SECTION 5, STATES, IN PART, "QUALITY AFFECTING ACTIVITIES SHALL BE BASED ON...DRAWINGS...AS APPROPRIATE." CONTRARY TO THE ABOVE, THE DRAWINGS USED TO CONDUCT PLANT OPERATIONS (FMS AND OPS) WERE INCONSISTENT. THE FOLLOWING EXAMPLES ARE SEVERAL OF THE DISCREPANCIES NOTED BY THE INSPECTOR BETWEEN THE OPS AND FMS: FM-22A SHOWS FOUR CONTAINMENT ISOLATION VALVES ON INSTRUMENTATION LINES WHICH ARE NOT SHOWN ON OP 19/19-1 EVEN THOUGH BOTH DRAWINGS DEPICT THE SAME PIPING. FM-16A SHOWS AN AIR OPERATED VALVE BETWEEN THE OFFGAS FILTERS AND THE STACK BUT OP 24A-1/24-1 DOES NOT, EVEN THOUGH BOTH DRAWINGS DEPICT THE SAME PIPING. FM-43A SHOWS DAMPER D-3 THAT IS NOT SHOWN ON OP-20/20-1 EVEN THOUGH THE DRAWINGS DEPICT THE SAME SYSTEM.
(7913 DEFICIENCY)

10 CFR 50 APPENDIX B, CRITERION XVI, STATES THAT MEASURES SHALL BE ESTABLISHED TO ASSURE THAT CONDITIONS ADVERSE TO QUALITY ARE PROMPTLY CORRECTED. THE FSAR, APPENDIX D, SECTION D.2.2.0 STATES THAT THE QA PROGRAM COMPLIES WITH WASH 1283, DATED MAY 24, 1974. WASH 1283 ENDORSES ANSI N45.2.12-1974. ANSI N45.2.12-1974 STATES THAT THE AUDITED ORGANIZATION SHALL RESPOND TO AN AUDIT REPORT WITHIN 30 DAYS OF THE RECEIPT OF THE RESULTS OF THE AUDIT. THE RESPONSE SHALL CLEARLY STATE THE CORRECTIVE ACTION TAKEN OR A SCHEDULED DATE BY WHICH CORRECTIVE ACTION WILL BE COMPLETED. CONTRARY TO THE ABOVE, THE ENGINEERING DEPARTMENT HAD NOT RESPONDED TO AUDIT REPORT NO. 1 OF THE IMPLEMENTATION OF ENGINEERING DEPARTMENT PROCEDURES AS OF SEPTEMBER 19, 1979. THE RESULTS OF AUDIT REPORT NO. 1 WERE FORWARDED TO THE ENGINEERING DEPARTMENT ON OCTOBER 5, 1978.
(7913 INFRACTION)

THE J. A. FITZPATRICK TECHNICAL SPECIFICATIONS, SECTION 6.1 STATES THAT THE RESIDENT MANAGER REPORTS TO THE GENERAL MANAGER AND CHIEF ENGINEER (A SINGLE POSITION). THE INDIAN POINT NO. 3 TECHNICAL SPECIFICATIONS, SECTION 6.2.1 STATES THAT THE ORGANIZATION SHALL BE AS SHOWN ON FIGURE 6.2.1 WHICH SHOWS THE RESIDENT MANAGER REPORTING TO THE GENERAL MANAGER AND CHIEF ENGINEER. CONTRARY TO THE ABOVE, THE RESIDENT MANAGERS AT J. A. FITZPATRICK AND INDIAN POINT NO. 3 WERE REPORTING TO THE DIRECTOR OF POWER OPERATIONS, WHO IS ADMINISTRATIVELY, AT A LOWER LEVEL THAN THE GENERAL MANAGER AND CHIEF ENGINEER. A FORMAL REQUEST FOR A CHANGE IN TECHNICAL SPECIFICATIONS WAS NOT SUBMITTED FOR FITZPATRICK AND NRC APPROVAL WAS NOT GRANTED FOR EITHER FACILITY.
(7913 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

+ An approximate 6 inch axial pipe crack has developed on the suction line to condensate booster pump B. A temporary fix has been made. Reactor thermal limits reduced to 2 percent less than rated to prevent exceeding CMFLPD limit.

FACILITY ITEMS (PLANS AND PROCEDURES):

+ Refueling outage scheduled for April, 1980.

MANAGERIAL ITEMS:

None

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-033/03X	10/08/79	11/09/79	30 Day LER	MFLPD exceeded TS limit during normal operations
79-093/03X	10/21/79	11/28/79	30 Day LER	CMFLPD was found to be out of specification during routine check
79-103/01T	12/05/79	12/17/79	Other	Analysis determined that one support on the B RHR steam condensing mode heat exchanger was inoperative
79-106/03L	11/18/79	12/17/79	30 Day LER	MSIV 29-ADV-80A limit switch does not provide half-scram signal on 10 percent closure of valve
79-107/03L	12/03/79	12/26/79	30 Day LER	Primary containment hydrogen analyzer went out of calibration and containment atmosphere was sampled using portable equipment
79-108/03L	12/06/79	01/03/80	30 Day LER	RCIC pump made inoperable to check pump bearings
79-109/03L	12/13/79	01/08/80	30 Day LER	Drywell and suppression pool temperature instrument went out of calibration due to a failed printed circuit board
79-110/03L	12/14/79	01/08/80	30 Day LER	HPCI system steam supply isolation valve closed due to spurious isolation signal
79-111/03L	12/14/79	01/10/80	30 Day LER	HPCI/RCIC steam line high flow instrument found out of calibration during testing
79-112/03L	12/16/79	01/11/80	30 Day LER	Fire doors DG-272-2 and DG-272-3 did not close during testing due to door misalignment
79-113/03L	12/21/79	01/15/80	30 Day LER	Core spray valve 14-MOV-11B failed to reopen during testing
79-114/04T	12/21/79	01/03/80	14 Day LER	Co-60 sample activity was greater than ten times the control sample activity when measured in accordance with ETS requirements
79-115/03L	12/21/79	01/15/80	30 Day LER	Stack gas radiation monitor system inoperable due to plugged sample line
79-116/03L	12/27/79	01/16/80	30 Day LER	SRMS failed at various times during reactor operation and while shutdown
79-117/03L	12/27/79	01/17/80	30 Day LER	Setpoint drift on APRM D scram trip point

PLANT STATUS:

+ The plant operated routinely during the month of January. Power was reduced to perform a control rod change as the unit is approaching end of core life.

+ LAST IE SITE INSPECTION DATE: 2/15/80

+ INSPECTION REPORT NO: 50-333/80-01

SUMMARY

INSPECTION SUMMARY

50-333/79-17 - Dec 11-14: Routine, unannounced inspection of: plant operations, Licensee Event Reports (LERs); Personnel Qualifications; IE Bulletin and Circular responses; and licensee action on previous inspection reports. The inspectors participated in an NRC Team review of the Small Break Loss of Coolant Accident Procedure Implementation. The report also documents in-office review of LERs. The inspection involved 67 hours onsite by two region-based inspectors. No items of noncompliance were identified.

+ 50-333/79-18 - Dec 12-14: Special, unannounced inspection of the licensee's response to IE Bulletin 79-19 and of the licensee's radiation protection program. Areas inspected included document control, procedures, training, audits, facility tours, and waste solidification. The inspection involved 17 hours onsite by one NRC region-based inspector. One item of noncompliance was identified (Failure to follow procedures).

LAST IE SITE INSPECTION DATE: December 1 - 28, 1979

INSPECTION REPORT NO: 50-267/79-22

SUMMARY

INSPECTION SUMMARY

INSPECTION ON NOVEMBER 14-16, 1979, AND NOVEMBER 28-30, 1979 (79-19): ROUTINE, ANNOUNCED INSPECTION OF LICENSEE ACTIONS TAKEN IN RESPONSE TO IE BULLETIN 79-02, REVISION 2. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION ON DECEMBER 3-7, 1979 (79-20): ROUTINE UNANNOUNCED INSPECTION INCLUDED A REVIEW OF SECURITY PLAN; THE SECURITY PROGRAM AUDIT, SECURITY ORGANIZATION, PROTECTED AREA PHYSICAL BARRIERS, AND LIGHTING; ACCESS CONTROL (IDENTIFICATION, AUTHORIZATION, AND BADGING); ACCESS CONTROL (SEARCH); ALARM STATIONS; TESTING AND MAINTENANCE; COMPENSATORY MEASURES; RECORDS AND REPORTS; FOLLOW-UP ON PREVIOUS ITEMS OF NONCOMPLIANCE, DEVIATIONS, AND FOLLOW-UP ON IE CIRCULAR 79-16. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 1-28, 1979 (79-22): ROUTINE, ANNOUNCED INSPECTION OF RESERVE SHUTDOWN SYSTEM; RADIATION PROTECTION; SURVEILLANCE; PART 21 REPORT; MAINTENANCE; PHYSICAL SECURITY; PLANT OPERATIONS; TRAINING; REQUALIFICATION TRAINING; FOLLOWUP ON ITEMS OF NONCOMPLIANCE; AND FOLLOWUP ON INSPECTOR IDENTIFIED AND UNRESOLVED PROBLEMS. WITHIN THE ELEVEN (11) AREAS INSPECTED, TWO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED (INFRACTION -FAILURE TO FOLLOW PROCEDURES (TWO EXAMPLES), AND INFRACTION - FAILURE TO WRITE A PROCEDURE AS REQUIRED BY TECHNICAL SPECIFICATIONS.

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- Evaluations of linear indications on pressurizer power operated relief valve yokes are continuing.

FACILITY ITEMS (PLANS AND PROCEDURES):

- Plant shutdown for the annual refueling and maintenance outage has been rescheduled to begin on March 28, 1980.

MANAGERIAL ITEMS:

None.

PLANT STATUS:

- Routine power operation continues.

LAST IE SITE INSPECTION DATE: 1/17/80

- INSPECTION REPORT NO: 50-244/80-01

SUMMARY

INSPECTION SUMMARY

- 50-244/79-17 - Nov 13-16: Routine, unannounced inspection of of plant operations; observation of control room activities; and, onsite Licensee Event Report followup. The inspection involved 25 inspector-hours onsite by one NRC regional based inspector. No items of noncompliance were identified.
- 50-244/79-18 - Dec 3-6: Special unannounced inspection by regional based inspectors of the licensee's response to IE Bulletin 79-19, "Packaging of Low-Level Radioactive Waste for Transport and Burial". Areas inspected included: regulatory requirements, burial site requirements, procedures, training audits, inspection of packages and review of records. In addition, the inspector reviewed actions taken by the licensee in response to previous inspection findings and to the indications of a primary to secondary steam generator leak that occurred on December 1, 1979.
- 50-244/79-19 - Dec 18-20: Routine, unannounced inspection of plant operations; inoffice and onsite review of Licensee Event Reports; review of interim corrective measures associated with a potential failure mechanism associated with the pressurizer power operated relief valve yoke and review of monthly operating reports. The inspection involved 22 inspector-hours onsite by one NRC regional based inspector. No items of noncompliance were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 20.101 ON FEBRUARY 15, 1979, THREE INDIVIDUALS WERE PERMITTED TO RECEIVE EXPOSURE TO THE WHOLE BODY IN EXCESS OF 1 1/4 REMS DURING THE FIRST QUARTER OF 1979 WITHOUT HAVING THEIR ACCUMULATED OCCUPATIONAL DOSE TO THE WHOLE BODY DETERMINED ON FORM NRC-4, OR ON A CLEAR AND LEGIBLE RECORD CONTAINING ALL THE INFORMATION REQUIRED IN THAT FORM OR OTHERWISE COMPLIED WITH THE REQUIREMENTS OF 10 CFR 20.102, "DETERMINATION OF ACCUMULATED DOSE."
(7906 INFRACTION)

CONTRARY TO 10 CFR 20.201(B) SURVEYS ADEQUATE TO ASSURE COMPLIANCE WITH 10 CFR 20.101 WERE NOT MADE: ON FEBRUARY 3 ON ENTRY TO THE STEAM GENERATOR TO DETERMINE BETA DOSE RATE AND EXPOSURE TO THE LENS OF THE EYE; ON FEBRUARY 16 WHEN PERSONNEL WORKED IN CLOSE PROXIMITY TO A FUEL HANDLING TOOL W/DOSE RATES UP TO 600 MRAD/HR AT CONTACT; AND ON MARCH 7, 1979, WHEN IT WAS FOUND THAT THE SURVEY INSTRUMENT USED TO MONITOR RWP 792395 (CLEAN OUT FLUX THIMBLES) PRODUCED INACCURATE AND UNRELIABLE INFORMATION.
(7906 INFRACTION)

10 CFR 20.103, "EXPOSURE OF INDIVIDUALS TO CONCENTRATIONS OF RADIOACTIVE MATERIALS IN AIR IN RESTRICTED AREAS," STATES IN PART, "(B)(2)... OTHER PRECAUTIONARY PROCEDURES, SUCH AS INCREASED SURVEILLANCE, LIMITATION OF WORKING TIMES, OR PROVISION OF RESPIRATORY PROTECTIVE EQUIPMENT, SHALL BE USED TO MAINTAIN INTAKE OF RADIOACTIVE MATERIAL BY ANY INDIVIDUAL WITHIN ANY PERIOD OF SEVEN CONSECUTIVE DAYS AS FAR BELOW THAT INTAKE OF RADIOACTIVE MATERIAL WHICH WOULD RESULT FROM INHALATION OF SUCH MATERIAL FOR 40 HOURS AT THE UNIFORM CONCENTRATIONS SPECIFIED IN APPENDIX B, TABLE I, COLUMN 1 AS IS REASONABLY ACHIEVABLE." CONTRARY TO THIS REQUIREMENT, BETWEEN FEBRUARY 11 AND MARCH 9, 1979 (OTHER) PRECAUTIONARY PROCEDURES WERE NOT USED TO MAINTAIN INTAKE OF RADIOACTIVE MATERIALS PURSUANT TO 10 CFR 20.103(B)(2).
(7906 INFRACTION)

10 CFR 20.103, "EXPOSURE OF INDIVIDUALS TO CONCENTRATIONS OF RADIOACTIVE MATERIALS IN AIR IN RESTRICTED AREAS," STATES IN PART, "(A)(1) NO LICENSEE SHALL POSSESS, USE, OR TRANSFER LICENSED MATERIAL IN SUCH A MANNER AS TO PERMIT ANY INDIVIDUAL IN A RESTRICTED AREA TO INHALE A QUANTITY OF RADIOACTIVE MATERIAL IN ANY PERIOD OF ONE CALENDAR QUARTER GREATER THAN THE QUANTITY WHICH WOULD RESULT FROM INHALATION FOR 40 HOURS PER WEEK FOR 13 WEEKS AT UNIFORM CONCENTRATIONS OF RADIOACTIVE MATERIAL IN AIR SPECIFIED IN APPENDIX B, TABLE I, COLUMN 1..." IN THIS REGARD SECTION (A)(3) STIPULATES, "FOR PURPOSES OF DETERMINING COMPLIANCE WITH THE REQUIREMENTS OF THIS SECTION THE LICENSEE SHALL USE SUITABLE MEASUREMENTS OF CONCENTRATIONS OF RADIOACTIVE MATERIALS IN AIR FOR DETECTING AND EVALUATING AIRBORNE RADIOACTIVITY IN RESTRICTED AREAS..." CONTRARY TO THIS REQUIREMENT, BETWEEN JANUARY 29 AND MARCH 1, 1979 SUITABLE MEASUREMENTS OF CONCENTRATIONS OF RADIOACTIVE MATERIALS IN AIR FOR DETECTING AND EVALUATING AIRBORNE RADIOACTIVITY WERE NOT MADE IN THE REACTOR CONTAINMENT IN THAT NONE OF THE 910 AIR SAMPLES COLLECTED DURING THIS PERIOD WERE REPRESENTATIVE OF THE CONCENTRATIONS OF AIRBORNE RADIOACTIVITY IN THE BREATHING ZONE OF WORKERS, BUT RATHER, THE AIR SAMPLES WERE COLLECTED IN THE GENERAL AREA OF THE REACTOR CONTAINMENT AT VARIOUS LOCATIONS THAT WERE NOT DIRECTLY REPRESENTATIVE OF THE BREATHING ZONE OF WORKERS.
(7906 INFRACTION)

CONTRARY TO 10 CFR 20.203(E) ON FEBRUARY 15, 1979, THE SPENT FUEL BUILDING AND AREAS OR ROOMS WITHIN THAT BUILDING, IN WHICH LICENSED MATERIAL WAS USED OR STORED CONTAINING RADIOACTIVE MATERIAL IN EXCESS OF 10 TIMES THE QUANTITY OF SUCH MATERIAL SPECIFIED IN APPENDIX C OF THIS PART WAS NOT CONSPICUOUSLY POSTED WITH A SIGN OR SIGNS BEARING THE RADIATION CAUTION SYMBOL AND THE WORDS: CAUTION - RADIOACTIVE MATERIAL. RADIOACTIVE MATERIAL STORED IN THAT LOCATION CONSISTED OF 1) THREE PRESSURIZER CODE SAFETY VALVES HAVING RADIATION LEVELS AS HIGH AS 400 MREM PER HOUR; AND 2) EXPENDED FUEL ASSEMBLIES CONTAINING SEVERAL THOUSAND CURIES OF RADIOACTIVE MATERIAL.
(7906 DEFICIENCY)

CONTRARY TO 10 CFR 20.203(F) ON FEBRUARY 15, 1979, THREE OPEN 55-GALLON DRUMS CONTAINING PRESSURIZER CODE SAFETY VALVES FROM WHICH RADIATION WAS MEASURED TO BE AS HIGH AS 400 MREM PER HOUR AT CONTACT, AND HAVING LOOSE SURFACE CONTAMINATION AS HIGH AS 300,000 DPM/100CM2 DID NOT BEAR ANY LABEL OR OTHER INFORMATION SUFFICIENT TO PERMIT INDIVIDUALS HANDLING OR USING THE CONTAINERS OR WORKING IN THE VICINITY THEREOF, TO TAKE PRECAUTIONS TO AVOID OR MINIMIZE EXPOSURES.
(7906 INFRACTION)

CONTRARY TO 10 CFR 20.405, AS OF MARCH 8, 1979 THE LICENSEE FAILED TO REPORT TO THE COMMISSION AND TO AT LEAST FIVE INDIVIDUALS, ALL OF THE EXPOSURE INFORMATION THAT HAD BEEN DETERMINED FOR INCLUSION ON THE INDIVIDUALS' FORM NRC-5, IN THAT ONLY WHOLE BODY EXPOSURE WAS REPORTED FOR THESE INDIVIDUALS WHEN IN FACT THE INDIVIDUALS WERE DETERMINED TO HAVE RECEIVED EXPOSURE TO SKIN OF THE WHOLE BODY AND HANDS.
(7906 DEFICIENCY)

CONTRARY TO 10 CFR 20.201(B) SURVEYS ADEQUATE TO ASSURE COMPLIANCE WITH 10 CFR 20.101 WERE NOT MADE: ON FEBRUARY 3 WHEN ENTRY WAS MADE INTO NO. 1 STEAM GENERATOR W/250 MREM/HR. (GAMMA) AND 3,000 MRAD/HR (BETA) CONTAMINATION PRESENT; AND ON FEBRUARY 27, 1979 WHEN WORK WAS CONDUCTED ON A VALVE BONNET GASKET READING AS HIGH AS 200 MREM/HR AT CONTACT.
(7906 INFRACTION)

TECHNICAL SPECIFICATION 6.8, PROCEDURES, STATES IN PART, "WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED THAT MEET OR EXCEED THE REQUIREMENTS AND RECOMMENDATIONS OF SECTIONS 5.1 AND 5.3 OF ANSI N18.7-1972 AND APPENDIX "A" OF USAEC REGULATORY GUIDE 1.33..." USAEC REGULATORY GUIDE 1.33, QUALITY ASSURANCE PROGRAM REQUIREMENTS APPENDIX "A", SECTION G.5.C SPECIFIES PROCEDURES FOR "SURVEYS AND MONITORING". CONTRARY TO THIS REQUIREMENT, AS OF FEBRUARY 14, 1979 THERE WERE NO WRITTEN PROCEDURES ESTABLISHED, IMPLEMENTED OR MAINTAINED THAT ADDRESSED DETECTION, MONITORING, SURVEYS AND EVALUATION OF ALPHA AND BETA RADIOACTIVITY IN REGARDS TO INTERNAL AND EXTERNAL PERSONNEL EXPOSURE, EVEN THOUGH INDIVIDUALS WERE SUBJECT TO EXPOSURE FROM SOURCES OF THESE TYPES OF RADIATION.
(7906 INFRACTION)

CONTRARY TO TECHNICAL SPECIFICATION 6.11, THE FOLLOWING FAILURES TO FOLLOW PROCEDURES WERE IDENTIFIED: 1. ADMINISTRATIVE PROCEDURE NO. 1.1-40, REV. 2 WAS NOT FOLLOWED IN THAT A WORKER WAS PERMITTED TO EXCEED THE ADMINISTRATIVE RADIATION EXPOSURE LIMIT OF 2,750 MREM IN THE FIRST QUARTER, 1979, (RECEIVING AN EXPOSURE OF 2,930 MREM). 2. ADMINISTRATIVE PROCEDURE NO. ACP 1.1-37, SECTION 5.6, WAS NOT FOLLOWED WHEN INDIVIDUALS WORKING UNDER RWP'S FOR EDDY CURRENT TESTING, SLUDGE LANCING, FUEL SHUFFLING, AND REACTOR COOLANT PUMP OIL SWITCH WORK FAILED TO ACKNOWLEDGE THE RESPECTIVE RWP REQUIREMENTS BY INITIALING.
(7906 INFRACTION)

CONTRARY TO TECHNICAL SPECIFICATION 6.13, PARAGRAPH 2, ON FEBRUARY 14 AND 15, 1979, THE FOLLOWING AREAS OF THE PRIMARY AUXILIARY BUILDING WERE NOT LOCKED AND HAD DOSE RATES GREATER THAN 1,000 MREM/HR: RESIDUAL HEAT REMOVAL ACCESS, PIPE TRENCH ACCESS IN BLOWDOWN ROOM, PIPE TRENCH ACCESS IN VALVE OPERATING ROOM AND THE PIPE TRENCH ACCESS IN FAB PASSAGEWAY. ON FEBRUARY 15, 1979, THE FOLLOWING AREAS IN THE REACTOR CONTAINMENT ALSO HAD DOSE RATES GREATER THAN 1,000 MREM/HR AND WERE NOT LOCKED; THE INNER ANNULUS ACCESS, THE LOWER LEVEL OF CONTAINMENT AND THE INNER ANNULUS ACCESS FROM THE CHARGING FLOOR OF CONTAINMENT. - SEVERAL OF THESE AREAS WERE ALSO NOT POSTED AS HIGH RADIATION AREAS.
(7906 INFRACTION)

CONTRARY TO TECHNICAL SPECIFICATION 6.13, PARAGRAPH 1, ON FEBRUARY 15, 1979, TWO INDIVIDUALS PERFORMING HYDRO-LANCING WORK ON NO. 2 STEAM GENERATOR IN ACCORDANCE WITH RADIATION WORK PERMIT (RWP) NO. 791307 WERE WORKING IN A HIGH RADIATION AREA HAVING DOSE RATES BETWEEN 100 AND 3,000 MREM/HR, BUT WERE NOT PROVIDED WITH ANY OF THE CONTROLS SPECIFIED IN TS 6.13.1. RWP NO. 791307 REQUIRED THE USE OF A CONTINUOUS DOSE RATE INDICATING INSTRUMENT.
(7906 INFRACTION)

CONTRARY TO 10 CFR 19.12, INDIVIDUALS WORKING IN THE RESTRICTED AREA BETWEEN FEBRUARY 5 AND MARCH 1, 1979 (PARTICULARLY THOSE INDIVIDUALS WORKING IN THE REACTOR CONTAINMENT TO SUPPORT STEAM GENERATOR EDDY CURRENT TESTING, REACTOR CAVITY AND INNER ANNULUS DECONTAMINATION, AND STEAM GENERATOR HYDROLASING) WERE NOT ADEQUATELY INSTRUCTED IN THE HEALTH PROTECTION PROBLEMS ASSOCIATED WITH EXPOSURE TO RADIOACTIVE MATERIALS OR RADIATION AND IN PRECAUTIONS OR PROCEDURES TO MINIMIZE EXPOSURE IN THAT THE EXTENT OF THESE INSTRUCTIONS WERE NOT COMMENSURATE WITH THE RADIOLOGICAL HEALTH PROTECTION PROBLEMS THAT WERE ENCOUNTERED BY THESE INDIVIDUALS IN THE COURSE OF THEIR WORK.
(7906 INFRACTION)

10 CFR 71.3, "REQUIREMENT FOR LICENSE" STATES, "NO LICENSEE SUBJECT TO THE REGULATIONS IN THIS PART SHALL (A) DELIVER ANY LICENSED MATERIALS TO A CARRIER FOR TRANSPORT OR (B) TRANSPORT LICENSED MATERIAL EXCEPT AS AUTHORIZED IN A GENERAL LICENSE OR SPECIFIC LICENSE ISSUED BY THE COMMISSION, OR AS EXEMPTED IN THIS PART." CONTRARY TO THE ABOVE, ON SEPTEMBER 19, 1979, THE LICENSEE DELIVERED APPROXIMATELY 9.0 CURIES OF RADIOACTIVE WASTE MATERIAL TO A CARRIER FOR DISPOSAL WITHOUT AUTHORIZATION OF A GENERAL OR SPECIFIC LICENSE AND NO EXEMPTION TO 10 CFR 71 WAS APPLICABLE. SPECIFICALLY THE LICENSEE DID NOT HAVE COPIES OF ALL DOCUMENTS REFERENCED BY THE CERTIFICATE OF COMPLIANCE AS REQUIRED BY 10 CFR 71.12(B) AND ALSO THE RADIOACTIVE WASTE HAD NOT BEEN ANALYZED TO DETERMINE THE MOST RESTRICTIVE TRANSPORT GROUP AS REQUIRED BY 10 CFR 71(P)(III).
(7919 INFRACTION)

SUMMARY

INSPECTION SUMMARY

* 50-213/79-06 - Feb 14-16, 26-28 and Mar 5-9: Routine, unannounced inspection by three region-based inspectors (112 hours) of the Radiation Protection Program during the 1979 refueling outage, including Radiation Protection Procedures, Advance Planning and Preparation, Training, Exposure Control, Posting and Control, Radioactive and Contaminated Material Control, and Surveys. During the course of this inspection, allegations concerning the adequacy of the Radiation Protection program were made. These were reviewed in this inspection and in the ensuing investigation (79-07). Nine items of noncompliance were identified. (Failure to control high radiation areas between 100 and 1000 mrem/hr; Failure to control high radiation areas greater than 1000 mrem/hr; Failure to perform surveys; Failure to use precautionary procedures to limit exposure to airborne radioactivity; Failure to instruct workers; Failure to limit personnel exposure; Failure to adhere to procedures; Failure to label containers of radioactive material; and Failure to adequately report workers exposure).

* 50-213/79-07 - Mar 5-9, 16 and 20-23: Investigation by one investigator (81 hours) covering several allegations relating to the Radiation Protection Program during the 1979 refueling outage. The allegations were made in writing by a member of the contractor health physics group and by several members of the licensee and contractor health physics staff during the course of the investigation. Items of noncompliance identified are in inspection Report 79-06.

* 50-213/79-17 - Oct 15-19 and 24-26: Routine, unannounced inspection by two region-based inspectors (84 hours) of: the Security Plan; Security Program Audit; Security Organization; Physical Barriers; Lighting; Access Control; Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys and Combinations; Records and Reports and a followup of previous items of noncompliance; followup on I&E Bulletin 79-16, and Independent Actions. No items of noncompliance were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY CRITERION V OF APPENDIX B TO 10 CFR 50 AND IMPLEMENTED BY HATCH QA MANUAL SECTION 5. "ACTIVITIES AFFECTING QUALITY SHALL BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS, PROCEDURES...AND SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THOSE INSTRUCTIONS, PROCEDURES...". PARAGRAPH E OF HATCH PROCEDURE HNP-1-10124 REQUIRES PIPING SURVEILLANCE TEAMSTO DOCUMENT DIMENSIONAL DISCREPANCIES BETWEEN AS-BUILT CONDITIONS AND DRAWINGS BY MARKING UP THE DRAWINGS. CONTRARY TO THE ABOVE, THE FOLLOWING DIMENSIONAL DISCREPANCIES WERE EITHER NOT DOCUMENTED OR IMPROPERLY DOCUMENTED ON THE MARKED UP DRAWINGS: (1) AN 13-FEET 11-INCH DIMENSION BETWEEN DATA POINT 105 AND THE TEE NEXT TO VALVE F049 ON ISOMETRIC DRAWING E41-102 IS ACTUALLY APPROXIMATELY 15-FEET 11-INCHES AS-BUILT; (2) HANGER H9 SHOWN ON ISOMETRIC DRAWING E41-102 AS 5-FEET 8-INCHES FROM DATA POINT 70 AND ON THE FAR SIDE OF AN EXPANSION JOINT IS ACTUALLY APPROXIMATELY 3-FEET FROM DATA POINT 70 AND ON THE NEAR SIDE OF THE EXPANSION JOINT; (3) SNUBBER M23 SHOWN ON ISOMETRIC DRAWING E51-103 ATTACHED TO AN 8-INCH TEE IS ACTUALLY ATTACHED TO A SPOOLPIECE APPROXIMATELY ONE (1) FOOT FROM THE TEE; (4) AN EXISTING SMALL DIAMETER BRANCH LINE WAS NOT SHOWN ON ISOMETRIC DRAWING E51-103 BETWEEN DATA POINTS 20 AND 30. THE LOCATION MARKED UP ON THE DRAWING BY THE SURVEILLANCE TEAM IS APPROXIMATELY 4-FEET FROM THE ACTUAL LOCATION.

    the licensee should not submit a plan to decommission
    the facility was issued on February 11, 1980.

    MANAGERIAL ITEMS:

    None

    PLANT STATUS.

    Defueled.

  LAST IE SITE INSPECTION DATE:  7/24-27/79

*         INSPECTION REPORT NO:  50-03/79-02

3.  SUMMARY

    INSPECTION SUMMARY

    None.
```

LICENSE STATUS

The unit produced electricity to the expiration date (October 31, 1974) of delay granted by the AEC for installation of an ECCS system. The ECCS system was not subsequently installed and the unit was defueled on January 30, 1976.

On February 11, 1980, the NRC requested the utility to show cause as to why the operating authority of the license should not be revoked and why the licensee should not submit a plan within 120 days of this order to decommission the unit.

SYSTEMS AND COMPONENT PROBLEMS:

- None

FACILITY ITEMS (PLANS AND PROCEDURES):

- Next scheduled refueling outage 1/1/81.

MANAGERIAL ITEMS:

- (1) Confirmatory order issued February 11, 1980 concerning implementation of TMI Lessons Learned and Emergency Preparedness.

  (2) The licensee has appointed a new Instrumentation and Control Supervisor and a new Security Supervisor.

PLANT STATUS:

- Unit 2 returned to service on 2/10 after completion of turbine inspection and repairs.

- LAST IE SITE INSPECTION DATE: 2/2/80

- INSPECTION REPORT NO: 50-247/80-01

SUMMARY

INSPECTION SUMMARY

- 50-247/79-21 - Oct 14-Nov 10: Routine inspection (41 hours by 2 resident inspectors) of plant operations including: shift logs and records; tours of the facility; observations of physical security; Emergency Planning operations; surveillance testing; review of licensee events; and, follow-up on previous inspection items. No items of noncompliance were identified.

- 50-247/79-23 - Nov 11-Dec 8: Routine inspection (25 hours by 2 resident inspectors) of plant operations including: shift logs and records; tours of the facility; observations of physical security; Emergency Planning Drill; Reactor Coolant System Leakage and Pressurizer Safety Valve testing; periodic reports; and changes in station management staff. One item of noncompliance was identified (Failure to recognize a Quadrant Power Tilt calculation result in excess of Technical Specification limits).

- 50-247/79-24 - Nov 15-16: Routine, unannounced inspection of the licensee's response to IE Bulletin 79-19 including maintenance of regulatory requirements, training, audits and procedures. The inspection involved 28 hours onsite by two NRC region-based inspectors. Of the five areas inspected, one item of noncompliance was found (Failure to have copies of all documents referenced by the Certificate of Compliance).

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
1	01/04/80	F	15.4	A	3		EB	ELECON	1. BUS FAULT FROM MAIN AUXILIARY TRANSFORMER RESULTED IN A TURBINE/REACTOR TRIP.
2A	01/17/80	F	158.7	A	3		EB	TRANSF	2A. BUSHING FAILURE IN RESERVE AUXILIARY TRANSFORMER CAUSED LOSS OF POWER TO ALL BUT SAFEGUARDS BUSSES. UNIT TRIP FOLLOWED IMMEDIATELY.
2B	01/17/80	F	106.0	A	3		CB	MECFUN	2B. APPARENT FAILURE OF NO. 2 SEAL ON 1B RCP EXTENDED THIS OUTAGE.

SUMMARY

THE UNIT ENTERED THE REPORT PERIOD AT REDUCED LOAD FOR TURBINE STOP VALVE TESTS. ON 01/04/80, A BUS FAULT FROM THE MAIN AUXILIARY TRANSFORMER RESULTED IN A TURBINE/REACTOR TRIP. A REACTOR/TURBINE TRIP OCCURRED ON 01/17/80 FROM A BUSHING FAILURE IN THE RESERVE AUXILIARY TRANSFORMER. THE UNIT WAS SHUTDOWN FROM 01/18/80 THROUGH 01/27/80 TO REPAIR THE RESERVE AUXILIARY TRANSFORMER AND A NO. 2 SEAL ON REACTOR COOLANT PUMP B.

OTHER ITEMS OF INTEREST

FACILITY ITEMS(PLANS AND PROCEDURES)

+ Current plans are to shutdown the reactor about February 1, 1980 to shuffle six fuel elements in order to extend cycle 6 lift until May 1, 1980 when refueling will be accomplished. (79-22)

MANAGERIAL ITEMS:

+ The licensee has lost two more licensed operators and is activitely recruiting to fill these vacancies and other engineering positions that are vacant. (79-22)

PLANT STATUS

Plant is operating routinely.

+LAST IE SITE INSPECTION DATE: December 3-6, 1979

+ INSPECTION REPORT NO: 79-22

INSPECTION SUMMARY

+ Inspection on December 3-6, (79-22): Routine unannounced inspection of the licensee's operational activities: and followup actions relative to IE Bulletins, IE Circulars, Licensee Event Reports and special reports. The inspection involved 29 inspector hours onsite by one NRC inspector. No items of noncompliance were identified in the five areas inspected.

NRC POWER RESTRICTIONS: NONE

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- An error identified in the Main Steam Line Break safety analysis will require a modification to feedwater regulating valve controls prior to startup.

FACILITY ITEMS (PLANS AND PROCEDURES):

- None

MANAGERIAL ITEMS:

- Startup following the refueling outage is planned for February 28, 1980.

PLANT STATUS:

- Routine plant operation continued until January 11, when a refueling/maintenance outage commenced.

- LAST IE SITE INSPECTION DATE: 1/25/80

- INSPECTION REPORT NO: 50-309/80-01

SUMMARY

INSPECTION SUMMARY

- 50-309/79-17 - Dec 3-7: Routine unannounced inspection by region-based inspectors of: plant operations including review of shift logs and records, tour of accessible areas, and observation of plant activities; licensee actions concerning selected previous inspection findings and IE Bulletins and Circulars; required licensee periodic reports; and follow-up on selected Licensee Event Reports (LER's). The inspection involved 37 hours onsite by two NRC inspectors. No items of noncompliance were identified.

- 50-309/79-21 - Dec 17-19: Routine, unannounced inspection of the licensee conducted emergency drill; tour of accessible areas; and a followup on selected Radwaste Shipment Discrepancy Reports. The inspection involved 22 hours onsite by two region-based inspectors. No items of noncompliance were identified.

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

ON 11/7/79, AN OPEN CAN OF COMBUSTIBLE DEBRIS WAS OBSERVED IN THE UNIT 1 CONTROL ROOM, & AN OPEN CAN OF COMBUSTIBLE DEBRIS WAS OBSERVED IN THE UNIT 2 D.C SWITCHGEAR ROOM. EVIDENCE OF SMOKING WAS OBSERVED IN THE UNIT 1 CONTROL ROOM MAIN CONTROL BOARD.
(7925 INFRACTION)

CONTRARY TO TS 6.8.1, 6.8.3 & 1.2.A, PROCEDURES WERE NOT ESTABLISHED FOR THREE SURVEILLANCES: TEMPORARY CHANGES WERE MADE TO 2 CALIBRATION PROCEDURES WHICH WERE NOT DOCUMENTED; AND 4 SURVEILLANCE TESTS EXCEEDED THEIR REQUIRED TEST INTERVAL.
(7927 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- The Isolation Condenser System has been removed from Standby Service (isolated) because of construction deficiencies in the steam line containment penetration pipe restraint. The reactor has been operated at a maximum power level of 40% with the system isolated.

FACILITY ITEMS (PLANS AND PROCEDURES):

None

MANAGERIAL ITEMS:

None

PLANT STATUS:

- The plant has been operating at 40% power with the Isolation Condenser System out of service. Representative offgas and stack release rates are 65,000 microcuries per second and 150 microcuries per second, respectively.

- LAST IE SITE INSPECTION DATE: 1/31/80

- INSPECTION REPORT NO: 50-245/80-01

SUMMARY

INSPECTION SUMMARY

- 50-245/79-25 - Nov 5-9: Routine unannounced inspection (14 hours) of the Fire Protection/Prevention Program including: assignment of functional responsibilities; implementation of administrative controls; fire brigade training; ignition source and combustible materials control; fire protection systems and components; plant modifications; surveillance test records; and critical fire areas. Noncompliance: One (Failure to follow housekeeping procedures).

- 50-245/79-26 - Nov 27-30, Dec 3-7: Routine, unannounced inspection (49 hours) by a region-based inspector and an NRR engineer of the Quality Assurance Program (QAP) implementation in the areas of: QA/QC administration; design changes/modifications; document control; QAP changes; and followup on previously identified items. Noncompliances: None.

- 50-245/79-27 - Nov 27-30: Routine, unannounced inspection by a region-based inspector (30 hours) of: action on previous inspection findings; administrative control of safety related calibrations; calibration of safety-related components and equipment required by Technical Specifications; calibrations required by Technical Specifications of components and equipment associated with safety-related systems and/or functions; calibration and control of test equipment; witnessing of calibrations; technician qualifications; and, control room tour. Noncompliances: One (Failure to establish surveillance procedures, document temporary changes, and adhere to surveillance frequencies).

- 50-245/79-30 - Dec 19-20: Special, unannounced inspection by a region-based inspector (7 hours) of the licensee's response to Bulletin 79-19 including: regulatory requirements, procedures; training; audits; records of shipments; and onsite observations. Noncompliances: None.

NRC POWER RESTRICTIONS: NONE

OTHER ITEMS OF INTEREST

FACILITY ITEMS(PLANS AND PROCEDURES):

- The licensee is building an office building extension. The radiation protection group will have new offices and will relocate mask fitting and whole body counting equipment to a room adjacent to these new offices. (79-19)

PLANT STATUS

- The plant continued in the coastdown mode of operation. Power level at the end of the month was 79%. A refueling outage is scheduled to begin February 22, 1980.

+LAST IE SITE INSPECTION DATE: December 17-18 and 21, 1979

- INSPECTION REPORT NO: 79-21

SUMMARY

INSPECTION SUMMARY

- Inspection on December 17-18, (79-19): Nonroutine, announced inspection of the licensee's response to IE Bulletin No. 79-19. The inspection involved 12 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.
- Inspection on December 17-18 and 21, (79-21): Routine, announced inspection of confirmatory measurements, including the licensee's program for quality control of analytical measurements; evaluation of the licensee's analytical results of plant effluent samples obtained during a previous inspection; collection of plant effluent samples for future comparative analyses; and licensee internal audit. The inspection involved 12 inspector hours onsite by one NRC inspector. No apparent items of noncompliance or deviations were identified for the areas inspected.

ROUTINE OPERATIONS AFTER COMPLETION OF REFUELING OUTAGE ON 1/22/30.

LAST IE SITE INSPECTION DATE: FEBRUARY 8, 1980

INSPECTION REPORT NO: 50-338/80-08

SUMMARY

INSPECTION SUMMARY

INSPECTION NOVEMBER 5-13 AND 26-30 (79-48): THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED EIGHT HOURS ON SITE IN THE AREAS OF IE CICULARS AND NOTICES AND LICENSEE EVENT REPORTS. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 17-21 (79-49): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 32 INSPECTOR-HOURS ON SITE IN THE AREAS OF CALIBRATION OF IN-PLANT INSTRUMENTATION REQUIRED BY TECHNICAL SPECIFICATIONS; CALIBRATION OF MEASURING AND TEST EQUIPMENT USED ON SAFETY-RELATED SYSTEMS; AND SURVEILLANCE OF IN-PLANT EQUIPMENT REQUIRED BY TECHNICAL SPECIFICATIONS. OF THE THREE AREAS INSPECTED, FOUR APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN THREE AREAS (INFRACTION - FAILURE TO IMPLEMENT SURVEILLANCE TEST; INFRACTION - FAILURE TO CONDUCT PROPER REVIEW OF SURVEILLANCE TEST RESULTS; DEFICIENCY - FAILURE TO MAINTAIN RECORDS FOR TEST AND MEASURING EQUIPMENT; AND INFRACTION - FAILURE TO FOLLOW SURVEILLANCE TEST PROCEDURES).

INSPECTION DECEMBER 10-12 (79-50): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 16 INSPECTOR-HOURS ON SITE IN THE AREAS OF PREVIOUS IDENTIFIED CONCERNS, LICENSEE COMMITMENTS FOR THE REFUELING OUTAGE, AND LICENSEE EVENT REPORTS. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO FORWARD WRITTEN REPORTS OF LICENSEE EVENTS IN SPECIFIED TIMEFRAME).

INSPECTION DECEMBER 18-20 (79-51): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 22 INSPECTOR-HOURS ON SITE IN THE AREAS RELATED TO DIESEL GENERATORS AND CHARGING PUMPS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 3-21 (79-52): THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED 23 HOURS ON SITE IN THE AREAS OF PREVIOUSLY IDENTIFIED OPEN ITEMS, GENERAL EMPLOYEE TRAINING, EMERGENCY PROCEDURE TRAINING, PLANT TOURS, LICENSEE EVENT REPORTS, AND PLANT STATUS RELATIVE TO STARTUP FROM THE REFUELING OUTAGE NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 50 APPENDIX "B" CRITERION V AS IMPLEMENTED BY DUKE POWER COMPANY TOPICAL REPORT 1A SECTION 17.2.5 AND OCONEE TECHNICAL SPECIFICATION SECTION 6.4.1 ACTIVITIES AFFECTING QUALITY SHALL BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS, PROCEDURES OR DRAWINGS ... AND SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THESE INSTRUCTIONS PROCEDURES OR DRAWINGS: (1) DUKE POWER COMPANY PROCEDURE MP/0/A/3019/01 PARAGRAPH 11.3 NOTE 3 REQUIRES THAT 'ANY ATTACHMENTS (EXTRA PIPES, CABLE TRAYS, EXTRA STEEL, ETC.) MUST BE SHOWN ON THE SUPPORT RESTRAINT DESIGN DRAWING. CONTRARY TO THE ABOVE, HANGER NUMBERS 51A-0-479A-H21C, 51A-0-479A-H18C AND 2-53B-2-0-436E-R3 HAD ATTACHMENTS THAT WERE NOT SHOWN ON THE SURVEILLANCE "AS-BUILT" DESIGN DRAWINGS. (2) DUKE POWER COMPANY PROCEDURE SPECIFICATION NO. OS-0020.00-00-003 PARAGRAPH 4.4.2 REQUIRES THAT WEDGE ANCHORS SHALL HAVE THE PROPER TEST TORQUE APPLIED TO ENSURE EXPANSION OF THE ANCHOR. CONTRARY TO THE ABOVE, HANGER 1-07A-400B-DE014 PLATE A WAS FOUND TO HAVE THREE WEDGE ANCHORS THAT HAD BEEN TORQUED TO LESS THAN THE REQUIRED TEST TORQUE VALUE.
(7939 INFRACTION)

LAST IE SITE INSPECTION DATE: JANUARY 2-31, 1980

INSPECTION REPORT NO: 50-269/80-05

SUMMARY

INSPECTION SUMMARY

INSPECTION NOVEMBER 26-27 AND DECEMBER 4-5 (79-34): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 10.5 INSPECTOR-HOURS ON SITE IN THE AREAS OF HIGH PRESSURE INJECTION MODIFICATION - WELDING, AND RECORDS REVIEW, UNIT 1; UNIT 1 FIFTH OUTAGE ISI INSPECTION, WORK OBSERVATION AND REVIEW OF THE ISI PROGRAM, PROCEDURES AND RECORDS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION NOVEMBER 27-30 (79-35): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 11 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIATION PROTECTION, INCLUDING QUALIFICATION OF HEALTH PHYSICS PERSONNEL, RADIOLOGICAL CONTROL PROCEDURES, POSTING, LABELING AND CONTROL; REVIEW OF LICENSEE ACTION ON I&E BULLETINS, CIRCULARS AND NOTICES AND FOLLOWUP ON AN ON SITE SPILL OF RADIOACTIVE WATER. OF THE FOUR AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; TWO APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (INFRACTION - FAILURE TO FOLLOW PROCEDURE; AND DEFICIENCY - FAILURE TO LABEL CONTAINERS OF RADIOACTIVE MATERIAL).

INSPECTION NOVEMBER 1-30 (79-36): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 26 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, LER REVIEW AND FOLLOWUP, REVIEW OF SELECTED EMERGENCY PROCEDURES, REVIEW OF DRAWING CONTROL AND REVIEW OF SELECTED TEST DATA. OF THE FIVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 5-7 (79-38): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 8 INSPECTOR-HOURS ON SITE. THE AREAS INSPECTED WERE REFUELING ACTIVITIES IN UNIT 1, ROUTINE OPERATIONS OF UNIT 2 AND POST-REFUELING POWER ESCALATION TESTS OF UNIT 3. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN THE THREE AREAS INSPECTED.

INSPECTION DECEMBER 3-5 (79-39): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 7 INSPECTOR-HOURS ON SITE IN THE AREAS OF PIPE SUPPORT BASEPLATE DESIGNS USING CONCRETE EXPANSION ANCHOR BOLTS WORK ACTIVITIES AND RECORDS; SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS WORK ACTIVITIES AND RECORDS; SITE SECURITY SEARCH PROCEDURE ACTIVITIES. OF THE FIVE AREAS INSPECTED, TWO ITEMS OF NONCOMPLIANCE WERE FOUND IN FIVE AREAS.

MEETING NOVEMBER 30 (79-40): CORPORATE MANAGEMENT MEETING TO DISCUSS RESULTS OF ACTIONS REQUESTED BY LETTER, DATED OCTOBER 25, 1979, TO DUKE POWER COMPANY; ENFORCEMENT HISTORY, LICENSEE EVENTS AND THE LICENSEE'S TOTAL PERFORMANCE. LICENSEE MANAGEMENT ACKNOWLEDGED THE CONCERNS EXPRESSED BY NRC REPRESENTATIVES AND INDICATED THE CORRECTIVE ACTIONS PROGRAM OUTLINED IN THEIR AUDIT DATED NOVEMBER 16, 1979, SHOULD RESULT IN IMPROVED PERFORMANCE.

INSPECTION DECEMBER 3-20 (79-41): THIS ROUTINE, INSPECTION INVOLVED 18 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, LICENSEE REPORTABLE EVENT, EMERGENCY POWER SYSTEM MAINTENANCE AND FOLLOWUP OF IEB 79-21. OF THE FOUR AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN THREE AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO FOLLOW PROCEDURE RESULTING IN NONCOMPLIANCE WITH TECHNICAL SPECIFICATION 3.3).

INSPECTION JANUARY 9-11 (80-2): THIS ROUTINE ANNOUNCED INSPECTION INVOLVED 12 INSPECTOR-HOURS ON SITE IN THE AREAS OF PIPE SUPPORT BASEPLATE DESIGNS USING CONCRETE EXPANSION ANCHOR BOLTS; SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

+ Two Core Spray System II Sparger cracks were identified during routine ISI. Licensee is currently evaluating the problem and its resolution.

FACILITY ITEMS (PLANS AND PROCEDURES):

+ None

MANAGERIAL ITEMS:

None.

PLANT STATUS:

+ The plant was shutdown on January 5, 1980 for a scheduled 10 week refueling outage.

+ LAST IE SITE INSPECTION DATE: 2/1/80

+ INSPECTION REPORT NO: 50-219/80-04

SUMMARY

INSPECTION SUMMARY

+ 50-219/79-21 - Nov 27-30: Routine, onsite, unannounced inspection by one region-based inspector (29 hours) of 7 areas: followup of previous inspection findings; review of plant operations; in office LER review; onsite LER followup; IEB followup; and independent effort. A plant tour was also conducted. Noncompliances: None.

+ 50-219/79-24 - Dec 11-14 and 18: Routine, unannounced inspection by two region-based inspectors (55 hours) of 5 inspection areas: followup on previous inspection findings; independent inspection effort; IE Bulletin followup; review of periodic reports; and, fire protection. Noncompliances: One (Storage of flammable material on the 119 foot elevation of the reactor building).

+ 50-219/80-04 - Jan 16: Management meeting held at NRC request to discuss details related to the establishment of an onsite office for the purpose of placing an NRC resident inspector at the facility. All parties concurred on administrative and operational considerations needed to establish an onsite NRC resident inspector office.

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50.55A(G) REQUIRES INSERVICE TESTING OF ASME CODE CLASS 1, 2 AND 3 VALVES BE PERFORMED IN ACCORDANCE WITH SECTION XI OF THE ASME BOILER AND PRESSURE VESSEL CODE 1974 EDITION AND ADDENDA THROUGH SUMMER 1975. ARTICLE IWV-3410 OF THIS CODE REQUIRES THAT THE VALVE BE TESTED MONTHLY IF AN INCREASE IN STROKE TIME OF 25% OR MORE FROM THE PREVIOUS TEST IS FOUND. CONTRARY TO THE ABOVE, DATA OBTAINED FROM QO-5, "VALVE TEST PROCEDURE" ON JANUARY 17, 1979 AND APRIL 17, 1979, SHOW THAT VALVE CV-0533B, STEAM SUPPLY TO TURBINE DRIVEN AUXILIARY FEEDWATER PUMP, INCREASED FROM 42.2 SECONDS TO 57.0 SECONDS (35% INCREASE) AND THE TEST FREQUENCY WAS NOT INCREASED TO MONTHLY. THIS ITEM APPEARS TO BE REPETITIVE AS IE INSPECTION REPORT 50-255/78-23 CONTAINED A SIMILAR ITEM OF NONCOMPLIANCE REGARDING INSERVICE TESTING OF ASME CODE CLASS 1, 2 AND 3 COMPONENTS.
(7920 INFRACTION)

10 CFR 50, APPENDIX B, CRITERIA XII, CONTROL OF MEASURING AND TEST EQUIPMENT REQUIRES MEASURES BE ESTABLISHED TO ASSURE INSTRUMENTS USED ARE PROPERLY CONTROLLED, CALIBRATED AND ADJUSTED AT SPECIFIED PERIODS TO MAINTAIN ACCURACY. ADMINISTRATIVE PROCEDURE 17.0 REQUIRES TEST EQUIPMENT BE TRACEABLE. QAPP 12-51 REQUIRES TEST EQUIPMENT WHICH IS NOT RECALIBRATED WITHIN ITS SPECIFIED CALIBRATION INTERVAL TO BE CONSIDERED NONCONFORMING AND NOT USED UNTIL CORRECTIVE MEASURES HAVE BEEN TAKEN. CONTRARY TO THE ABOVE, THE SERIAL NUMBER OF THE TEST GAUGE USED IN PERFORMING SURVEILLANCE TEST AO-3 ON JULY 5, 1978, WAS NOT RECORDED. THREE DIFFERENT SERIAL NUMBERS WERE RECORDED FOR THE PERFORMANCE OF AO-3 ON JULY 29, 1979. DEADWEIGHT TESTER SERIAL NUMBER 8428-100018 WAS USED TO TEST A GAUGE ON JUNE 20, 1978, THE CALIBRATION DUE DATE FOR THE TESTER WAS JUNE 13, 1978.
(7920 INFRACTION)

TECHNICAL SPECIFICATION 4.5.3.A, RECIRCULATION HEAT REMOVAL SYSTEMS REQUIRES THE PORTION OF THE SHUTDOWN COOLING SYSTEM THAT IS OUTSIDE THE CONTAINMENT BE TESTED EITHER BY USE IN NORMAL OPERATION OR HYDROSTATICALLY TESTED AT 255 PSIG AT THE INTERVALS SPECIFIED IN 4.5.3.D.(12 MONTHS). CONTRARY TO THE ABOVE PROCEDURE AO-3, SHUTDOWN COOLING SYSTEM TEST, REV. 4, WHICH WAS PERFORMED ON JULY 29, 1979 AND JULY 5, 1978, TO FULFILL THE ABOVE REQUIREMENT TESTED THE PIPING AT LESS THAN 255 PSIG AND DID NOT TEST PIPING OUTSIDE THE CONTAINMENT BETWEEN VALVES 3199 AND 3190 AND MOV3016.
(7920 INFRACTION)

TECHNICAL SPECIFICATION 4.13.C REQUIRES THAT DURING NORMAL PLANT OPERATIONS, PHASE I MEASUREMENTS (REACTOR INTERNALS VIBRATION MONITORING) SHALL BE RECORDED AND ANALYZED ONCE PER SEVEN DAYS. TECHNICAL SPECIFICATION 4.0.2 ALLOWS EXTENSION BY 25% OF THE INTERVAL PROVIDED AND THREE CONSECUTIVE INTERVALS DO NOT EXCEED 3.25 TIMES THE SPECIFIED INTERVAL. CONTRARY TO THE ABOVE, MEASUREMENTS WERE MADE ON JULY 2, 11, 20 AND 31, 1979, WHICH EXCEEDS THE 3.25 TIMES THE INTERVAL FOR THREE INTERVALS AND IN ONE INSTANCE THE 25% ALLOWABLE EXTENSION.
(7920 INFRACTION)

TECHNICAL SPECIFICATION 6.9.2.A(6) REQUIRES THAT A PROMPT REPORT WITH WRITTEN FOLLOWUP WITHIN 14 DAYS BE MADE OF PROCEDURAL INADEQUACIES WHICH PREVENT OR COULD PREVENT, BY ITSELF, THE FULFILLMENT OF THE FUNCTIONS REQUIRED OF SYSTEMS REQUIRED TO COPE WITH AN ACCIDENT ANALYZED IN THE FSAR. CONTRARY TO THE ABOVE PROCEDURE, INADEQUACIES IN THE VALVE CHECK OFF SHEETS OF SURVEILLANCE TEST AO-3, "SHUTDOWN COOLING SYSTEM TESTS", WHICH RESULTED IN VALVES IN THE SODIUM HYDROXIDE PORTIONS OF THE IODINE REMOVAL SYSTEM BEING INADVERTENTLY CLOSED FOR A PERIOD OF TIME ON JULY 29 AND 30, 1979, WAS NOT REPORTED WITHIN THE REQUIRED TIME.
(7920 INFRACTION)

TECHNICAL SPECIFICATION 6.8.1 AND 6.8.3 REQUIRE THAT WRITTEN PROCEDURES FOR SURVEILLANCE ACTIVITIES BE FOLLOWED UNLESS TEMPORARY CHANGES ARE MADE WHICH ARE APPROVED BY TWO MEMBERS OF THE PRC AT LEAST ONE OF WHOM HOLDS A SENIOR REACTOR OPERATORS LICENSE AND THAT THE CHANGE SUBSEQUENTLY BE REVIEWED BY THE PRC AND APPROVED BY THE PLANT SUPERINTENDENT. ADMINISTRATIVE PROCEDURE 10-3-1, "TEMPORARY PROCEDURE CHANGES," WHICH IS ALSO REQUIRED TO BE FOLLOWED BY TECHNICAL SPECIFICATION 6.8.1; ESTABLISHES A SYSTEM TO MAKE THESE CHANGES AND TO INCORPORATE THEM PERMANENTLY INTO THE PROCEDURE WHERE REQUIRED. CONTRARY TO THE ABOVE, ON JULY 5, 1978, CHANGES WERE MADE TO SURVEILLANCE PROCEDURE AO-3, "SHUTDOWN COOLING SYSTEM" TEST WITHOUT REVIEWS, APPROVALS AND DOCUMENTATION REQUIRED ABOVE. THE CHANGE AFFECTED THE AFTER TEST POSITION OF SODIUM HYDROXIDE SYSTEM VALVES 3363ES AND 3364ES AND CORRECTED AN ERROR IN THE PROCEDURE. FAILURE TO MAKE THE CHANGE PROPERLY RESULTED IN THE ERROR STILL EXISTING IN THE PROCEDURE AND IN THESE VALVES BEING INCORRECTLY POSITIONED WHEN THE PROCEDURE WAS PERFORMED A YEAR LATER.
(7920 INFRACTION)

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-44/ 03L-0	07/29/79	01/21/80	30 Day LER	Valves 3363ES and 3364ES were left in closed position, such that the NaOH addition system was not returned to service.
80-01/ 01T-0	01/09/80	01/25/80	14 Day LER	Pipe and pipe support stress per IEB 79-14 do not meet FSAR criteria for either the SSE or OBE.

==

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS

- Reactor shutdown on September 10, 1979, to begin a 10-week scheduled refueling and maintenance outage. Start-up tentatively scheduled for late February 1980.

- LAST IE SITE INSPECTION DATE: November 30, 1979

- INSPECTION REPORT NO: 79-24

SUMMARY

INSPECTION SUMMARY

- Inspection on September 17-20; October 17-19, 24, 30; November 7, 30; December 6, 10, 1979; and January 7-9, 1980, (79-14): QA/QC program, implementing procedures, observation of work activities, and review and evaluation of nondestructive examination (NDE) data and reports of inservice inspection (ISI); IE Bulletin 79-13 and IE Bulletin 79-17 activities. The inspection involved 70 inspector hours onsite by two NRC inspectors and 5 hours at Southwest Research Institute. No items of noncompliance or deviations were identified.

- Inspection on October 26 and November 8-9, 15-16 and 21, (79-18): Licensee actions relative to IE Bulletins 79-14 and No. 79-02, including general discussion on NRC requirements, work procedure review, record, review, and observation of work. The inspection involved 24 inspector hours onsite, at the NRC offices, and at the licensee A-E's office by one NRC inspector. No items of noncompliance or deviations were identified.

- Inspection on October 22-26 and 29-30, (79-20): Routine, unannounced inspection of surveillance of safety related components and equipment; implementation of ASME Code Section XI for pumps and valves. The inspection involved 56 inspector hours onsite by one NRC inspector. Of the areas inspected, six items of noncompliance were identified (Control of Test Equipment, 10 CFR 50, Appendix B, Criterion XII; failure to report as required by Technical Specifications 4.5.3.a; failure to test as required by Technical Specifications 4.5.3.a; failure to make a temporary change as required by Technical Specification 6.8.3; failure to conduct surveillance tests at the interval specified by Technical Specification 4.13.c; failure to implement ASME Section XI test requirements for valves).

- Inspection on December 3-7, (79-21)! Routine, unannounced inspection of Environmental Protection, including a review of license management controls; quality control; environmental monitoring program and results and radioactive effluent release rates and limits; Emergency Planning including a review of the site Emergency Plan and implementing procedures; discussions with offsite support agency representatives; review of training, examination of facilities, emergency and first aid kits and supplies; emergency plan drills and critiques; and Confirmatory Measurements including discussion of previous sample results and collection of samples for future comparison. The inspection involved 40 inspector hours onsite by one NRC inspector. Of the 15 areas inspected, no apparent items of noncompliance or deviations were identified in two areas; two apparent items of noncompliance were identified in one area (excessive thermal discharge and discharge below pH limits).

- Inspection during November 1979 (79-22): Routine resident inspection program for November 1979, including procurement, modifications and followup on previously identified items. The inspection involved 100 inspector hours. No items of noncompliance or deviations were identified in any of the inspected areas.

- Inspection on November 30, (79-24): A special management meeting was held to discuss the Consumers Power Company program for the resolution of the problems associated with the breech of containment integrity event of September 11, 1979, and their program for meeting the requirements of the Order of November 9, 1979, modifying the Palisades operating license. The meeting was required by the order. No items of noncompliance were identified as a result of this meeting.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50, APPENDIX B, CRITERION VI STATES IN PART, "MEASURES SHALL BE ESTABLISHED TO CONTROL THE ISSUANCE OF DOCUMENTS, SUCH AS INSTRUCTIONS, PROCEDURES, AND DRAWINGS, INCLUDING CHANGES THERETO...THESE MEASURES SHALL ASSURE THAT DOCUMENTS...ARE DISTRIBUTED TO AND USED AT THE LOCATIONS WHERE THE ACTIVITY IS PERFORMED. THE LICENSEE'S NRC ACCEPTED QUALITY ASSURANCE PLAN, VOLUME III, SECTION 2, PARAGRAPH 6.1 STATES IN PART "...DOCUMENTS, INCLUDING CHANGES...ARE DISTRIBUTED TO AND USED AT THE LOCATION WHERE THE PRESCRIBED ACTIVITY IS PERFORMED." CONTRARY TO THE ABOVE REQUIREMENT CURRENT REVISIONS OF RADWASTE PROCEDURES S.10.4.1.B AND S.10.4.1.C WERE NOT DISTRIBUTED TO AND USED AT THE RADWASTE PANEL, THE LOCATION AT WHICH THE ACTIVITIES DESCRIBED IN THE PROCEDURES WERE PERFORMED.
(7927 INFRACTION)

TECHNICAL SPECIFICATION 6.8.1 REQUIRES THAT WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED THAT MEET THE REQUIREMENTS OF SECTIONS 5.1 AND 5.3 OF ANSI N18.7-1972 AND APPENDIX "A" OF USAEC REGULATORY GUIDE 1.33. LICENSEE PROCEDURES S.10.4.1.B AND S.10.4.1.C, DEVELOPED PURSUANT TO TECHNICAL SPECIFICATION 6.8.1, EACH REQUIRE THAT A CHECK OFF LIST BE COMPLETED IN THE INITIAL STEP OF THE PROCEDURE. CONTRARY TO THE ABOVE REQUIREMENT THE ACTIVITIES DESCRIBED IN THE PROCEDURES WERE PERFORMED ON SEVERAL OCCASIONS IN OCTOBER 1979 INCLUDING OCTOBER 31, AND NO CHECK OFF LISTS WERE COMPLETED.
(7927 INFRACTION)

CONTRARY TO 10 CFR 55, APP A, 3.D., THE LICENSEE WAS NOT ABLE TO SHOW THAT NINE LICENSED OPERATORS AND SENIOR OPERATORS REVIEWED THE CONTENTS OF ALL ABNORMAL AND EMERGENCY PROCEDURES IN THE PERIOD JANUARY 1977 - NOVEMBER 1979.
(7928 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- Automatic Depressurization System (ADS) valve nitrogen supply lines were found to have: (1) hard seated check valves on ADS valve accumulator which would leak such that system design capability could not be assured; and (2) supply lines not fully seismically qualified.

FACILITY ITEMS (PLANS AND PROCEDURES):

- None

MANAGERIAL ITEMS:

- An NPR Lessons Learned Team was onsite 1/22-23 to review the licensees implementation of Category "A" Short Term Lessons Learned items.

PLANT STATUS:

- The unit was returned to service 1/9 following a nine day scheduled outage but was shutdown on 1/10 to replace leaking ADS nitrogen supply check valves and perform maintenance on a recirculation pump suction valve. After returning to service 1/19, the reactor operated at a nominal 100 percent power. Representative off-gas and combined Unit 2 and Unit 3 stack gas release rates were 2870 microcuries per second and 942 microcuries per second, respectively.

- LAST IE SITE INSPECTION DATE: 1/31/80
- INSPECTION REPORT NO: 50-277/80-01

NRC POWER RESTRICTIONS: NONE

79-054/ 03L	12/13/79	01/11/80	30 Day LER	The 4 Channel B main steam line temperature monitors indicating lower than corresponding channels in the 3 other logic chains
80-001/ 01T	01/03/80	01/17/80	24 Hours	Drywell ventilation valve opened fully (analysis requires maximum 37 degree opening to assure closure during DBA)

SUMMARY

INSPECTION SUMMARY

- 50-277/79-26 - Oct 1-31: Routine, onsite and corporate office regular and backshift inspections by the resident inspector (58 hours). Areas inspected included: refueling activities; physical security; radiation protection for operations/refueling; plant operations; facility tours; control room inspection; LER review onsite; followup on previously identified unresolved items; organization and administration; review of periodic and special reports; and IE Bulletin/Circular followup. Noncompliances: One (Conducting refueling operations without having the mode switch locked in refuel).

- 50-277/79-29 - Nov 1-30: Routine, onsite and corporate office regular and backshift inspections by the resident inspector (45 hours). Areas inspected included: accessible portions of the Unit 2; radiation protection; maintenance; physical security; plant operations; facility tours; control room inspections; housekeeping; LER review onsite and in-office; followup on previously identified items; review of periodic and special reports, and IE Bulletin followup. Noncompliances: Two (Failure to adhere to Radiation Work Permit (RWP) requirements, and Failure to maintain a fire and penetration seal barrier).

4	01/25/80	S	.0	H	5		RC	ZZZZZZ	LOAD DROP TO 570 MWE FOR CONTROL ROD ADJUSTMENTS.

SUMMARY

THE UNIT WAS SHUTDOWN UNTIL 01/09/80 TO REPAIR THE CORE SPRAY FLOW TEST VALVE. DURING RETURN TO POWER, A REACTOR SCRAM OCCURRED DUE TO FAILURE OF ELECTRONIC COMPONENTS IN THE FEEDPUMP CONTROL CIRCUIT. THE UNIT WAS TAKEN OFF LINE AGAIN ON 01/10/80 FOR REPLACEMENT OF CHECK VALVES IN THE INSTRUMENT NITROGEN SUPPLY LINE FOR THE AUTOMATIC DEPRESSURIZATION SYSTEM AND OTHER **REPAIRS.** LOAD WAS REDUCED ON 01/22/80 DUE TO LOW LUBE OIL PRESSURE FOR THE RECIRCULATION PUMP MOTOR GENERATOR SET, AND ON 01/25/80 FOR CONTROL ROD ADJUSTMENT. THE UNIT WAS IN POWER COASTDOWN AT THE END OF JANUARY.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50, APPENDIX B, CRITERION XVI, STATES IN PART, THAT: "MEASURES SHALL BE ESTABLISHED TO ENSURE THAT...CONDITION ADVERSE TO QUALITY,...ARE PROMPTLY IDENTIFIED AND CORRECTED...." CONTRARY TO THE ABOVE, ON AUGUST 21, 1979, IT WAS IDENTIFIED BY QUALITY CONTROL THAT BOLT PATTERNS FOR THE BASE PLATES OF HANGER NOS. 33HB-H266 AND 33HB-H267 DID NOT CONFORM TO SPECIFIED BOLT PATTERNS ON THE APPLICABLE ISOMETRIC DRAWINGS, HOWEVER, NO CORRECTIVE ACTION WAS INITIATED TO SOLVE AND CORRECT THIS NONCONFORMANCE AS OF THE DATE OF THIS INSPECTION (SEPTEMBER 25, 1979). THIS IS AN INFRACTION.
(7926 INFRACTION)

TS 3.10.A.1 STATES IN PART "THE REACTOR MODE SWITCH SHALL BE LOCKED IN THE "REFUEL" POSITION DURING CORE ALTERATIONS...". CONTRARY TO THE ABOVE, ON 10/9/79, THE UNIT 3 MODE SWITCH WAS FOUND IN REFUELWITH THE KEY IN PLACE & CORE ALTERATIONS HAD OCCURRED PRIOR TO KEY REMOVAL.
(7928 DEFICIENCY)

10 CFR 50, APPENDIX B, CRITERION VI STATES IN PART, "MEASURES SHALL BE ESTABLISHED TO CONTROL THE ISSUANCE OF DOCUMENTS, SUCH AS INSTRUCTIONS, PROCEDURES, AND DRAWINGS, INCLUDING CHANCES THERETO...THESE MEASURES SHALL ASSURE THAT DOCUMENTS...ARE DISTRIBUTED TO AND USED AT THE LOCATION WHERE THE ACTIVITY IS PERFORMED. THE LICENSEE'S NRC ACCEPTED QUALITY ASSURANCE PLAN, VOLUME III, SECTION 2, PARAGRAPH 6.1 STATES IN PART "...DOCUMENTS, INCLUDING CHANGES...ARE DISTRIBUTED TO AND USED AT THE LOCATION WHERE THE PRESCRIBED ACTIVITY IS PERFORMED." CONTRARY TO THE ABOVE REQUIREMENT CURRENT REVISIONS OF RADWASTE PROCEDURES S.10.4.1.B AND S.10.4.1.C WERE NOT DISTRIBUTED TO AND USED AT THE RADWASTE PANEL, THE LOCATION AT WHICH THE ACTIVITIES DESCRIBED IN THE PROCEDURES WERE PERFORMED.
(7930 INFRACTION)

TECHNICAL SPECIFICATION 6.8.1 REQUIRES THAT WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED THAT MEET THE REQUIREMENTS OF SECTIONS 5.1 AND 5.3 OF ANSI N18.7-1972 AND APPENDIX "A" OF USAEC REGULATORY GUIDE 1.33. LICENSEE PROCEDURES S.10.4.1.B AND S.10.4.1.C, DEVELOPED PURSUANT TO TECHNICAL SPECIFICATION 6.8.1, EACH REQUIRE THAT A CHECK OFF LIST BE COMPLETED IN THE INITIAL STEP OF THE PROCEDURE. CONTRARY TO THE ABOVE REQUIREMENT THE ACTIVITIES DESCRIBED IN THE PROCEDURES WERE PERFORMED ON SEVERAL OCCASIONS IN OCTOBER 1979, INCLUDING OCTOBER 31, AND NO CHECK OFF LISTS WERE COMPLETED.
(7930 INFRACTION)

- CONTRARY TO 10 CFR 55, APP A, 3.D, THE LICENSEE WAS NOT ABLE TO SHOW THAT NINE LICENSED OPERATORS AND SENIOR OPERATORS REVIEWED THE CONTENTS OF ALL ABNORMAL AND EMERGENCY PROCEDURES IN THE PERIOD JANUARY 1977 - NOVEMBER 1979.
(7931 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

+ Automatic Depressurization System (ADS) valve nitrogen supply lines were found to have: (1) hard seated check valves on the ADS valve accumulator which would leak such that system design capability could not be assured; and (2) supply lines not fully seismically qualified.

FACILITY ITEMS (PLANS AND PROCEDURES):

+ None

MANAGERIAL ITEMS:

+ An NRR Lessons Learned Team was onsite 1/22-23 to review the licensees implementation of Category "A" TMI Short Term Lessons Learned items.

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-040/ 03L	12/06/79	01/03/80	30 Day LER	"C" core spray disch press SW above TS limit
79-041/ 03L	12/10/79	01/09/80	30 Day LER	While shutdown for maintenance a feedwater flush valve failed to close during surveillance testing making it inoperable

PLANT STATUS:

+ The reactor operated at a nominal 100 percent power during the month. The unit was shutdown for six days starting 1/12 to replace ADS nitrogen supply check valves and repair feedwater heater leaks. The unit was again shutdown on 1/29 to replace a recirculation pump seal. Representative offgas and combined Unit 2 and Unit 3 stack gas release rates were 3960 microcuries per second and 942 microcuries per second, respectively.

+ LAST IE SITE INSPECTION DATE: 1/31/80

+ INSPECTION REPORT NO: 50-278/80-01

SUMMARY

INSPECTION SUMMARY

+ 50-278/79-28 - Oct 1-31: Routine, onsite and corporate office regular and backshift inspections by the resident inspector (59 hours). Areas inspected included: refueling; physical security; radiation protection for operations/refueling; plant operations; facility tours; control room inspection; LER review onsite; followup on previously identified unresolved items; organization and administration; review of periodic and special reports; and IE Bulletin/Circular followup. Noncompliances: One (Conducting refueling operations without the mode switch locked in refuel).

+ 50-278/79-32 - Nov 1-30: Routine, onsite and corporate office regular and backshift inspections by the resident inspector (46 hours). Areas inspected included: system restoration from a refueling outage; startup; shutdown margin testing; accessible portions of the Unit; radiation protection; maintenance; physical security; plant operations; facility tours; control room inspections; housekeeping; periodic and special reports; and IE Bulletin followup. Noncompliances: Two (Failure to adhere to Radiation Work Permit (RWP) requirements; and Failure to maintain a fire and penetration seal barrier).

INSPECTION STATUS

ENFORCEMENT STATUS

ACCORDING TO TECHNICAL SPECIFICATION 15.4.10.1, THE LICENSEE IS REQUIRED AS PART OF THE RADIOLOGICAL ENVIRONMENTAL MONITORING PROGRAM TO ANALYZE SHORELINE SILT SAMPLE NO. 5 FOR GROSS BETA ACTIVITY AND GAMMA SCANNED SEMIANNUALLY. CONTRARY TO THE ABOVE, THE LICENSEE FAILED TO CONDUCT THE REQUIRED ANALYSES OF SHORELINE SILT SAMPLE NO. 5 FOR THE SECOND HALF OF 1978.
(7913 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS

- The Unit operated at approximately 77% power this month. This power level is about the maximum obtainable due to reduced primary temperature and pressure limits.

+LAST IE SITE INSPECTION DATE: November 26-30, 1979

+ INSPECTION REPORT NO: 79-18

SUMMARY

INSPECTION SUMMARY

- Inspection on November 26-30, (79-18): Routine, announced inspection of confirmatory measurements, environmental protection, and emergency planning for both units, including licensee programs for quality control of analytical measurements; submission of spiked air particulate and charcoal adsorber for future comparison; quality control of environmental measurements; implementation of environmental protection program; coordination with offsite support agencies; maintenance of emergency equipment, facilities, and supplies; medical arrangements; training; emergency procedures; conduct of tests and drills. The inspection involved 33 inspector hours onsite by one NRC inspector. Of the 15 areas inspected, no apparent items of noncompliance or deviations were identified in 14 areas; an apparent item of noncompliance (failure to analyze shoreline silt sample No. 5 for the second half of 1978) was identified in one area.

NRC POWER RESTRICTIONS: NONE

SUMMARY

OPERATION WAS ROUTINE AT A 390 MWE (NET) POWER RESTRICTION. THIS WAS DUE TO A SELF-IMPOSED REDUCTION IN CORE AVERAGE TEMPERATURE IN AN EFFORT TO INHIBIT STEAM GENERATOR TUBE CORROSION WITHIN THE TUBESHEET CREVICE.

*LAST IE SITE INSPECTION DATE: November 27-30, 1979

* INSPECTION REPORT NO: 79-20

SUMMARY

INSPECTION SUMMARY

* Inspection on November 26-30, (79-18): Routine, announced inspection of confirmatory measurements, environmental protection, and emergency planning for both units, including licensee programs for quality control of analytical measurements; submission of spiked air particulate and charcoal adsorber for future comparison; quality control of environmental measurements; implementation of environmental protection program; coordination with offsite support agencies; maintenance of emergency equipment, facilities, and supplies; medical arrangements; training; emergency procedures; conduct of tests and drills. The inspection involved 33 inspector hours onsite by one NRC inspector. Of the 15 areas inspected, no apparent items of noncompliance or deviations were identified in 14 areas; an apparent item of noncompliance (failure to analyze shoreline silt sample No. 5 for the second half of 1978) was identified in one area.

* Inspection on November 27-30, (79-20): Routine, unannounced inspection of core power distribution limits; core thermal power evaluation; power coefficient of reactivity measurement; determination of reactivity anomalies; incore/excore calibration; rod drop time test. The inspection involved 20 inspector hours onsite by one NRC inspector. Of the areas inspected, no items of noncompliance or deviations were identified.

◆ INSPECTION REPORT NO: 79-31

SUMMARY

INSPECTION SUMMARY

- Inspection on November 1-30, (79-29): Routine resident inspection of plant operations, security, radioactive waste system, IE bulletins and circulars and observation of a fire drill. The inspection involved 46 inspector hours by the resident inspector. No items of noncompliance or deviations were identified.

- Inspection on November 26-30, (79-31): Included a review of Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys, and Combinations; Records and Reports; and Followup on IE Bulletin No. 7916. The inspection involved 81 inspector hours onsite by two NRC inspectors. The inspection began during the day shift period; 12 inspector hours were accomplished during offshift periods. The licensee was found to be in compliance with NRC requirements within the 20 areas examined during this inspection except for the following six items: Locks, Keys and Combinations - Keys were not properly controlled; Alarm Stations - A required alarm station was not properly manned at all times. Corrected, no response necessary; Access Control, Authorization - Some individuals were not properly authorized access. Closed, no response necessary; Access Control, Search - A visitor was not properly searched; Access Control, Search - Some vehicles were not properly searched. Closed, no response necessary; Protected Area Barriers - The isolation zone was not properly maintained. Closed, no response necessary.

INSPECTION SUMMARY

+ Inspection on September 26-27; October 3-4, 22-23 and November 7-9, (79-24): Follow up to IE Bulletin No. 79-02, pipe support base plate designs using concrete expansion anchor bolts; review of test program and procedures; observation of testing anchor bolts; and review of quality records. The inspection involved 68 inspector hours onsite by one NRC inspector. No items of noncompliance were identified in the areas inspected.

+ Inspection on November 5 through December 14, (79-25): Routine, an announced resident inspection of maintenance, plant operations, access control, review and followup on licensee event reports, refueling activities, calibration, radiation protection, independent areas, and an unusual event. The inspection involved 260 inspector hours onsite by one NRC inspector. Of the nine areas inspected, no items of noncompliance were identified.

+ Inspection on November 13-15, (79-26): Nonroutine, announced inspection of licensee actions taken in response to IE Bulletin 79-19 "Packaging of Low-Level Radioactive Waste for Transport and Burial" and, as agreed with the State of South Carolina, verification that identified packaging discrepancies were corrected before resumption of radwaste shipments to Barnwell, South Carolina. The inspection involved 40 inspector hours onsite by two NRC inspectors. No items of noncompliance or deviations were identified.

+ Inspection on November 5-6, (79-27): Included a review of the Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys, and Combinations; Records and Reports; Follow-up on previous items of noncompliance; Follow-up on IE Bulletin No. 79-16. The inspection involved 102 inspector hours onsite by three NRC inspectors. The inspection was started during regular working hours. A total of 33 hours were accomplished during off-shift periods. The licensee was found to be in compliance with NRC requirements within the 20 areas examined except for the following items: Physical Barriers/Protected Area - The licensee failed to maintain an adequate isolation zone; and Access Control (Search) - The licensee failed to perform an adequate search of individuals and hand carried items prior to admittance into the protected area.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-37/ 03L-0	11/16/79	12/11/79	30 Day LER	One of the two Unit 1/2 DG starting air supply valves improperly positioned.
79-39/ 03L-0	12/20/79	01/15/80	30 Day LER	Operation with fuel exposure in excess of the highest fuel exposure for which MAPLHGR limits had been established.
79-40/ 03L-0	12/31/79	01/11/80	30 Day LER	Minimum TS suppression pool level exceeded during operation.
79-41/ 03L-0	12/17/79	01/15/80	30 Day LER	Containment purge isolation valve closure time exceeded TS requirement.
79-42/ 03L-0	12/14/79		30 Day LER	MSIV closure timing exceeded maximum closure time.

==

+ Inspection on December 5-6, (79-28): Licensee actions taken relative to IE Bulletin No. 79-14 including general discussion on NRC requirements, work procedure review and review of records; follow-up on licensee reports of hydraulic snubber seal problems. The inspection involved 8 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

+ Inspection on December 3-4, (79-29): Torus support modification and inservice inspection (ISI); QA/QC program, implementing procedures, work activities, and review and evaluation of data, nondestructive examination (NDE) and welding reports. The inspection involved 8 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

R-2

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO THE REQUIREMENTS OF TECHNICAL SPECIFICATION 6.5.2.8.B, THE LICENSEE DID NOT PERFORM AN ANNUAL AUDIT OF THE QUALIFICATIONS OF THE FACILITY STAFF DURING THE YEAR PRECEDING THE DATES OF THE INSPECTION (OCTOBER 29-NOVEMBER 1, 1979).
(7922 DEFICIENCY)

CONTRARY TO THE REQUIREMENTS OF TECHNICAL SPECIFICATION 6.8.3.C, A TEMPORARY CHANGE TO A PROCEDURE SUBJECT TO THIS SPECIFICATION (SFAS DIGITAL CHANNEL 1B REFUELING TEST, SP 203.01B) WAS NOT REVIEWED BY THE PRC AND APPROVED BY THE PLANT SUPERINTENDENT WITHIN SEVEN DAYS OF IMPLEMENTATION (IMPLEMENTED BETWEEN NOV. 18 AND DEC. 18, 1978).
(7922 INFRACTION)

CONTRARY TO THE REQUIREMENTS OF TECHNICAL SPECIFICATION 6.8.3.B, A TEMPORARY CHANGE TO A PROCEDURE SUBJECT TO THIS SPECIFICATION (QUARTERLY MAKEUP PUMP AND VALVES INSPECTION AND SURVEILLANCE TEST, SP 203.02C) WAS MADE AND IMPLEMENTED WITHOUT APPROVAL OF TWO MEMBERS OF THE PLANT MANAGEMENT STAFF (CHANGE APPROVED BY ONE MEMBER OF PLANT MANAGEMENT STAFF (SHIFT SUPERVISOR) AND BY CONTROL ROOM OPERATOR). CHANGE WAS MADE ON MARCH 8, 1978.
(7922 INFRACTION)

TECHNICAL SPECIFICATION TABLE 2.3-1 INDICATES THAT THE NUCLEAR POWER TRIP SETTING IS 5% OF RATED MAXIMUM WHEN THE PLANT IS IN THE SHUT DOWN BYPASS MODE. CONTRARY TO THIS REQUIREMENT, AT 0635 ON NOVEMBER 25, 1979, THE PLANT WAS PLACED IN THE SHUT DOWN BYPASS MODE, BUT THE NUCLEAR POWER TRIP WAS NOT RESET TO 5% OF RATED MAXIMUM.
(7925 INFRACTION)

TECHNICAL SPECIFICATION 6.9.4.1.B REQUIRES A PROMPT REPORT FOR OPERATION WHICH IS LESS CONSERVATIVE THAN THE LEAST CONSERVATIVE LCO. CONTRARY TO THIS REQUIREMENT, A DEGRADED VOLTAGE CONDITION WAS NOTED IN AN OCTOBER 19 LETTER TO THE NRC, BUT IT WAS NOT REPORTED UNTIL NOVEMBER 1, 1979.
(7925 DEFICIENCY)

80-01-L0	01-02-80	01-17-80	30 Day LER	Pipe spt inadequate for suction cross-tie between MU and HPI-B pumps.
80-02-T0	01-04-80	01-16-80	14 Day LER	Pipe spt inadequate making both DHR trains inoperable.

SUMMARY

INSPECTION SUMMARY

- Inspection on July 24-25, August 1-2, August 20, August 27, 1979 and January 10-11, 1980 (Report No. 50-312/79-17)
  Areas Inspected: Routine, unannounced inspection by Regional based inspectors of the licensee's activities performed in response to IE Bulletin 79-02, "Pipe Support Base Plate Designs Using Concrete Expansion Anchor Bolts." The inspection involved 61 inspector hours onsite by two NRC inspectors.

  Results: One item of noncompliance was identified as a result of the inspections.

- Enforcement Conference on November 21, 1979 (Report No. 50-312/79-24)
  An Enforcement Conference was held by representatives of IE Region V and members of SMUD at the Region V Office in Walnut Creek, California. The security inspection and enforcement history at Rancho Seco for the past three years was reviewed with emphasis on recent items of noncompliance.

- Inspection between December 3 & 19, 1979 (Report No. 50-312/79-28)
  Routine inspections of plant operations, physical security, training, followup on previously identified items, and independent inspection effort. The inspection involved 56 inspector hours onsite by the Senior Resident Inspector.

  Results: No items of noncompliance or deviations were identified.

- Inspection on January 17-26, 1980 (Report No. 50-312/80-01)
  Report being prepared; to be reported next month.

- Inspection on January 21, 1980 (Report No. 50-312/80-02)
  Report being prepared; to be reported next month.

- Inspection on January 2-31, 1980 (Report No. 50-312/80-03)
  Report being prepared; to be reported next month.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.2, PRIOR TO IMPLEMENTATION, CHANGES TO SAFETY SIGNIFICANT PROCEDURES SHALL BE REVIEWED BY THE PLANT NUCLEAR SAFETY COMMITTEE AND APPROVED BY THE PLANT MANAGER. CONTRARY TO THE ABOVE, DURING THE CYCLE 7 LOW POWER PHYSICS TESTING, STEP 5.29 OF APPENDIX D (CONTROL ROD REACTIVITY WORTH MEASUREMENT) TO PROCEDURE CPL-R-6.8 WAS CHANGED WITHOUT PROPER REVIEW AND APPROVAL. AN ABBREVIATED METHOD WAS USED TO MEASURE THE REACTIVITY WORTH OF CONTROL BANKS C AND D IN OVERLAP.
(7927 DEFICIENCY)

THE FIRE PROTECTION WATER SUPPLY CONNECTION TO THE AUXILIARY BUILDING FIRE HOSE SYSTEM IS NOT PROVIDED WITH A CONTROL VALVE LOCATED ON THE EXTERIOR OF THE BUILDING AND THE NORTHEAST PORTION OF THE EXTERIOR FIRE PROTECTION WATER MAIN IS NOT PROVIDED WITH A SECTIONAL CONTROL VALVE AS REQUIRED BY NFPA-24 WHICH IS REFERENCED BY SECTION 4.0 OF THE LICENSEE'S FIRE PROTECTION PROGRAM REVIEW AS THE APPLICABLE CODE FOR THIS INSTALLATION.
(7929 DEVIATION)

+ INSPECTION REPORT NO: 50-261/80-01

SUMMARY

INSPECTION SUMMARY

+ INSPECTION DECEMBER 3-6 (79-27): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 29 INSPECTOR-HOURS ON SITE IN THE AREAS OF REVIEW OF POST-REFUELING STARTUP AND POWER ESCALATION TESTING. OF THE AREAS INSPECTED, ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND (DEFICIENCY - FAILURE TO PROPERLY REVIEW AND APPROVE A CHANGE TO A SAFETY SIGNIFICANT PROCEDURE).

INSPECTION DECEMBER 10-14 (79-29): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED 36 INSPECTOR-HOURS ON SITE IN THE AREA OF FIRE PROTECTION/PREVENTION. OF THE AREA INSPECTED, ONE DEVIATION WAS FOUND (INADEQUATE AND SUBSTANDARD CONTROL AND SECTIONAL VALVES FOR FIRE PROTECTION WATER SYSTEM).

INSPECTION DECEMBER 11-14 (79-30): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 27 INSPECTOR-HOURS ON SITE IN THE AREAS OF PROCEDURES, PLANT OPERATIONS, LICENSEE EVENT FOLLOWUP, AND FOLLOWUP ON IE BULLETINS, CICULARS AND NOTICES. OF THE FOUR AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

- INSPECTION JANUARY 3 (80-01): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 7 INSPECTOR-HOURS ON SITE IN THE AREA OF STEAM GENERATOR FEEDWATER LINE RADIOGRAPHY (RT) - BULLETIN 79-13. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 6.8.1 STATES IN PART: "WRITTEN PROCEDURES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED COVERING...THE APPLICABLE PROCEDURES RECOMMENDED IN APPENDIX A OF REGULATORY GUIDE 1.33, NOVEMBER 1972." REGULATORY GUIDE 1.33 INCLUDES PARAGRAPH A.3 EQUIPMENT CONTROL (E.G. LOCKING AND TAGGING). THE IMPLEMENTING PROCEDURE, OPERATIONS DIRECTIVES MANUAL REVISION 5, STATES, IN SECTION 2.4.5, "...WHEN A NEW VALVE LINEUP IS PERFORMED, THE OPERATOR IS TO POSITION ALL VALVES AS SPECIFIED BY THE VALVE LINEUP AND INITIAL THE APPROPRIATE SPACE....THE COMPLETED VALVE LINEUP WILL THEN BE USED TO RECORD VALVE DEVIATIONS RESULTING FROM TAGGING OR VALVE MANIPULATIONS FOR SPECIAL PLANT CONDITIONS....WHEN A VALVE LINEUP IS DEVIATED FROM DUE TO TAGGING OR SPECIAL PLANT CONDITIONS, THE ON DUTY CONTROL OPERATOR WILL NOTE IN THE "C&T FOR OR OUT OF POSITION COLUMN" THE REASON...." CONTRARY TO THE ABOVE, ON NOVEMBER 1, 1979, MANUAL VALVES 11CS6 AND 12CS6 WERE FOUND TO BE SHUT. THE VALVE LINEUP AND DEVIATION SHEET INDICATED THAT THE VALVES WERE LOCKED OPEN AS SPECIFIED. THE LINEUP HAD BEEN COMPLETED AND INITIALED ON OCTOBER 27, 1979. NO DEVIATION FROM THE REQUIRED POSITION WAS NOTED.
(7928 INFRACTION)

IN CORRESPONDENCE TO THE DIRECTOR, OFFICE OF INSPECTION AND ENFORCEMENT, REGION I, DATED OCTOBER 11, 1979, RELATING TO IE BULLETIN 79-07 (SEISMIC STRESS ANALYSIS OF SAFETY RELATED PIPING), THE LICENSEE STATES, "...PRIOR TO ENTERING MODES 3 AND 4, THE FOLLOWING WORK WILL BE ACCOMPLISHED:...3) RE-EVALUATION OF THE SUPPORTS, NOZZLES, AND PENETRATIONS FOR ENTIRE AUXILIARY FEEDWATER SYSTEM...5) FIELD MODIFICATIONS TO SUPPORTS AND PENETRATIONS EVALUATED IN (2), (3) & (4) THAT FAIL TO MEET OUR CRITERIA STATED IN OUR SEPTEMBER 21, 1979 SUBMITTAL..." CONTRARY TO THE ABOVE, SALEM UNIT 1 ENTERED MODE 4 AT 0006 ON NOVEMBER 13, 1979 PRIOR TO COMPLETING REQUIRED MODIFICATIONS TO TWO SEISMIC SUPPORTS IN THE AUXILIARY FEEDWATER SYSTEM. THE SUPPORTS, AFS-156 AND AFS-157, ARE LOCATED ON THE SUCTION PIPING TO # 12 AUXILIARY FEEDWATER PUMP, AND WERE IDENTIFIED TO THE STATION AS REQUIRING REPAIR TO MEET DESIGN CRITERIA AT APPROXIMATELY 1545 ON NOVEMBER 13, 1979.
(7928 DEVIATION)

10 CFR 50, APPENDIX B, CRITERIA VI REQUIRES MEASURES BE ESTABLISHED FOR DOCUMENT CONTROL & REVIEW OF DOCUMENTS FOR ADEQUACY. THE LICENSEES MEASURES ESTABLISHED INCLUDE: QA MANUAL INSTRUCTION QAI 6-1, "DOCUMENT CONTROL" & SALEM QA PROGRAM PROCEDURE AP-17 SECTION 6.0 IF AO-17, "DOCUMENT CONTROL" ADDRESSES THE ABOVE. CONTRARY TO THE ABOVE, THE FOLLOWING WAS NOTED DURING A REVIEW OF RAD WASTE DOCUMENT CONTROL IMPLEMENTATION: - AS OF 11/13/79, NO CURRENT COPY OF 49 CFR PART 100 TO 199 WAS ONSITE. - TWO YEAR OLD COPIES OF 10 CFR 20 & 49 CFR 100 TO 199 WERE IN USE AT LOCATION OF ACTIVITY. - NO FORMALIZED METHOD OF DOCUMENT CONTROL WAS IN PLACE TO ASSURE IMPLEMENTATION OF ABOVE.
(7931 INFRACTION)

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-058/ 01T	09/07/79	11/10/79	24 Hours	Potential unreviewed safety question associated with environmental qualifications of non-safety related control systems
79-068/ 03L	11/28/79	12/20/79	30 Day LER	During cold shutdown #12 safety injection pump was started and the associated AC breaker tripped investigation revealed a bound shaft
79-069/ 03L	11/21/79	12/20/79	30 Day LER	While conducting a containment purge during Refueling the air particulate detector motor failed rendering the radiation monitor inoperable
79-071/ 03L	10/31/79	11/30/79	30 Day LER	During mode 5 operations, all three diesel generators were tagged out as inoperable due to an operator error
79-072/ 03L	11/05/79	12/03/79	30 Day LER	Meteorological instruments were out of service for 74 hours due to a failed inverter in the power supply
79-075/ 03L	11/23/79	12/20/79	30 Day LER	While performing an air lock leak rate test the overall leak rate was found to be in excess of allowable limits

SUMMARY

INSPECTION SUMMARY

+ 50-272/79-31 - Nov 13-15: Special, unannounced inspection by two region-based inspectors (33 hours) of the actions taken by the licensee in response to IE Bulletin No. 79-19, "Packaging of Low-Level Radioactive Waste for Transport and Burial", including: document control and review; radioactive waste management; personnel organization; audits; radioactive waste solidification; and followup on previous enforcement action. Noncompliances: One (Failure to provide document control and adequate procedures in accordance with 10 CFR 50).

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION XVI, AS AMPLIFIED BY SECTION D.16 OF THE FSAR AND SECTION 12.0 OF THE QA MANUAL, A CORRECTIVE ACTION REQUEST WAS NOT INITIATED TO IDENTIFY THE MISSING FIRE HOSES FOUND DURING THE FIRE HOSE INSPECTION OF APRIL 5, 1978.
(7901 DEFICIENCY)

CONTRARY TO TS 6.4.1 AND SECTION 5.5 OF ANSI N18.1-1971, NO TRAINING PROGRAM FOR THE RETRAINING OF MAINTENANCE PERSONNEL HAD BEEN ESTABLISHED.
(7901 DEFICIENCY)

CONTRARY TO TS 6.8.1 AND APPENDIX A OF REGULATORY GUIDE 1.33, REVISION 1, WRITTEN PROCEDURES FOR A COMPREHENSIVE PREVENTIVE MAINTENANCE PROGRAM WERE NOT PROVIDED.
(7901 DEFICIENCY)

CONTRARY TO TS 6.5.1.7.B, THE ON-SITE REVIEW COMMITTEE WAS NOT PROVIDING THE PLANT MANAGER WITH A WRITTEN DETERMINATION REGARDING THE UNREVIEWED SAFETY QUESTION ISSUE FOR THE PROCEDURES AND PROCEDURE CHANGES THEY REVIEWED.
(7901 DEFICIENCY)

CONTRARY TO TS 6.5.2.8, THE NUCLEAR AUDIT AND REVIEW COMMITTEE FAILED TO AUDIT THE PERFORMANCE, TRAINING AND QUALIFICATIONS OF FACILITY STAFF MEMBERS OTHER THAN THE LICENSED OPERATORS. THE COMMITTEE ALSO FAILED TO AUDIT CONFORMANCE TO TS 3.3.4 IN 1973.
(7901 INFRACTION)

CONTRARY TO TS 6.8.1 AND BTP APCSB 9.5-1, LIVE FIRE FIGHTING DEMONSTRATIONS WERE NOT HELD DURING 1978 AND FIRE BRIGADE MONTHLY TRAINING MEETINGS WERE NOT HELD BETWEEN SEPTEMBER 15 AND NOVEMBER 2, 1978.
(7901 DEFICIENCY)

CONTRARY TO TS 6.8.1 AND SECTION 5.3 OF ANSI N18.7-1976: (1) CERTAIN DIVISION ORDERS AND STATION ORDERS DID NOT CONFORM TO THE REQUIREMENTS OF ANSI N18.7; (2) PROCEDURES HAD NOT BEEN ISSUED FOR THE INSERVICE TESTING OF PUMPS; AND (3) A MAINTENANCE PROCEDURE FOR RELIEF VALVE TESTING DID NOT CONTAIN APPROPRIATE ACCEPTANCE CRITERIA.
(7901 INFRACTION)

IN DEVIATION FROM THE GUIDANCE OF SECTION 4.2.1 OF ANSI N 18.7-1972 TO WHICH THE LICENSEE WAS COMMITTED BY APPENDIX D OF THE FSAR, THE NUCLEAR AUDIT AND REVIEW COMMITTEE (NARC) CHARTER DID NOT DESCRIBE THE MECHANISM USED TO INITIATE THE NARC AUDITS NOR DID IT IDENTIFY THE MANAGEMENT POSITION TO WHICH NARC AUDITORS IN THE QA ORGANIZATION REPORT WHEN THEY ARE PERFORMING NARC AUDITS.
(7901 DEVIATION)

TECHNICAL SPECIFICATION 6.9.2.B(2) REQUIRES THAT CONDITIONS LEADING TO OPERATION IN A DEGRADED MODE PERMITTED BY A LIMITING CONDITION FOR OPERATION SHALL BE REPORTED TO THE NRC WITHIN 30 DAYS OF OCCURRENCE OF THE EVENT. CONTRARY TO THIS REQUIREMENT, AN OCCURRENCE INVOLVING THE FAILURE OF THE LOOP C TAVE CHANNEL ON OCTOBER 11, 1979, RENDERING THE CORRESPONDING VARIABLE LOW PRESSURE SAFETY INJECTION TRIP CHANNEL INOPERABLE HAD NOT BEEN REPORTED TO THE NRC AT THE TIME OF THE INSPECTION. THE VARIABLE LOW PRESSURE SAFETY INJECTION TRIP CHANNELS ARE REQUIRED TO BE OPERABLE IN ACCORDANCE WITH THE LIMITING CONDITIONS FOR OPERATION PROVISION IN TECHNICAL SPECIFICATION 3.5.1.B.
(7917 DEFICIENCY)

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT

43	01/26/80	S	141.3	H	1		ZZ	ZZZZZZ	TMI MODIFICATIONS.

SUMMARY

OPERATION WAS ROUTINE UNTIL 01/26/80 WHEN THE UNIT WAS TAKEN OFF LINE TO COMPLETE TMI-RELATED MODIFICATIONS. LOAD REDUCTIONS OCCURRED ON 01/03/80, 01/13/80, AND 01/15/80 FOR PERIODIC TESTING. A UNIT TRIP OCCURRED ON 01/16/80 FROM A STEAM FLOW/FEEDWATER FLOW MISMATCH TRIP CAUSED BY A CONSTRUCTION WORKER WHO ACCIDENTALLY STRUCK THE CLOSING CIRCUIT CONTROL RELAY TO THE EAST FEEDWATER PUMP NORMAL DISCHARGE VALVE.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO PART 21 REQUIREMENTS, FPL CORPORATE QA MANUAL QA PROCEDURE, QP 16.4, PARAGRAPH 5.2 AND FIGURE 16.4-1 DOES NOT REQUIRE THAT ALL DEVIATIONS BE FORMALLY EVALUATED AND DOCUMENTED AS PART 21 EVALUATIONS. SINCE FORMAL PART 21 EVALUATIONS ARE NOT PERFORMED AND DOCUMENTED IN ALL CASES, IT FOLLOWS THAT THE INFORMING OF THE RESPONSIBLE OFFICER (2121(A)(2)), THE WRITTEN REPORTS TO THE COMMISSION CONTAIN THE REQUIRED INFORMATION (21.21(B)(3)), AND THE REQUIRED RECORDS BE MAINTAINED (21.51) REQUIREMENTS CANNOT BE MET.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 6.4.B.1.6, AREAS WITH RADIATION LEVELS IN EXCESS OF 1000 MREM/HR SHALL BE PROVIDED WITH LOCKED BARRICADES TO PREVENT UNAUTHORIZED ENTRY INTO THESE AREAS. CONTRARY TO THE ABOVE, ON NOVEMBER 27, 1979, THE GATE CONTROLLING ACCESS TO THE BORIC ACID FILTER AREA (GATE NO. 7) DID NOT HAVE A LOCK ADEQUATE TO PREVENT UNAUTHORIZED ENTRY. RADIATION LEVELS WERE 2000 MREM/HR. (7964 INFRACTION)

CONTRARY TO THE 10 CFR 50, APPENDIX B, CRITERION V, SECTION 1-6 OF PT'S 2.1-2.11 GENERATED BETWEEN 1/1/79 AND 11/27/79 WERE NOT REVIEWED BY THE COGNIZANT SUPERVISOR AND PERFORMANCE ENGINEER, INITIALED AND SIGNED IN INK, AND RETAINED IN THE STATION FILE ROOM FOR FIVE YEARS. (7965 DEFICIENCY)

CONTRARY TO THE TECHNICAL SPECIFICATION 6.4.D, THE AUXILIARY FEED PUMP DISCHARGE VALVES (MOV-FW-151C AND MOV-FW-151E) WERE TESTED ON 10/13/79 AND THE OPENING TIME EXCEEDED THE 25% LIMIT. NO STATION DEVIATION WAS SUBMITTED FOR THESE VALVES AND THE ERROR WAS NOT IDENTIFIED IN THE REVIEW PROCESS. (7965 INFRACTION)

UNIT IS CURRENTLY OPERATING.

+ LAST IE SITE INSPECTION DATE: FEBRUARY 1, 1980

+ INSPECTION REPORT NO: 50-280/80-02

SUMMARY

INSPECTION SUMMARY

+ INSPECTION NOVEMBER 27-30 (79-64): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 34 INSPECTOR-HOURS ON SITE IN THE AREAS OF SHIPMENTS OF RADIOACTIVE MATERIALS AND FACILITY TOURS. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - HIGH RADIATION AREA LOCK INADEQUATE TO PREVENT UNAUTHORIZED ACCESS).

INSPECTION NOVEMBER 26-30 (79-65): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 33 INSPECTOR-HOURS ON SITE IN THE AREAS OF CALIBRATION OF IN-PLANT INSTRUMENTATION REQUIRED BY TECHNICAL SPECIFICATIONS; CALIBRATION OF MEASURING AND TEST EQUIPMENT USED ON SAFETY-RELATED SYSTEMS; AND SURVEILLANCE OF IN-PLANT EQUIPMENT REQUIRED BY TECHNICAL SPECIFICATIONS. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; TWO APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (INFRACTION - FAILURE TO FOLLOW SURVEILLANCE TEST PROCEDURE; AND DEFICIENCY - FAILURE TO REVIEW AND RETAIN INSTRUMENT CALIBRATION PROCEDURES).

INSPECTION DECEMBER 3-7 (79-66): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 28 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIOLOGICAL ENVIRONMENTAL MONITORING PROGRAM INCLUDING: MANAGEMENT CONTROL, QUALITY CONTROL OF ANALYTICAL MEASUREMENTS, INSPECTION OF ENVIRONMENTAL MONITORING STATIONS, REVIEW OF ENVIRONMENTAL MONITORING DATA, REVIEW OF RADIOLOGICAL ENVIRONMENTAL MONITORING PROCEDURES, AND IMPLEMENTATION OF THE MONITORING PROGRAM. OF THE SIX AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION NOVEMBER 1 - DECEMBER 14 (79-67): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 120 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS AND OPERATING RECORDS, PLANT MAINTENANCE, AND PLANT SECURITY. OF THE THREE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE FOUND IN TWO AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN THE REMAINING AREA (INFRACTION - FAILURE TO FOLLOW CORRECTIVE MAINTENANCE PROCEDURES).

INSPECTION DECEMBER 10-12 (79-68): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 40 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONSTRUCTION STATUS, ENGINEERING TASK ASSIGNMENT REVIEW, LICENSEE ACTION ON PREVIOUS INSPECTION FINDINGS, NONCONFORMANCE REPORT REVIEW, ON SITE DRAWING/ETA REVIEW, AND LONG TERM STORAGE OF STEAM GENERATOR LOWER ASSEMBLIES. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

NRC POWER RESTRICTIONS: NONE

SUMMARY

INSPECTION SUMMARY

INSPECTION NOVEMBER 27-30 (79-84): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 34 INSPECTOR-HOURS ON SITE IN THE AREAS OF SHIPMENTS OF RADIOACTIVE MATERIALS AND FACILITY TOURS. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - HIGH RADIATION AREA LOCK INADEQUATE TO PREVENT UNAUTHORIZED ACCESS).

INSPECTION NOVEMBER 26-30 (79-85): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 33 INSPECTOR-HOURS ON SITE IN THE AREAS OF CALIBRATION OF IN-PLANT INSTRUMENTATION REQUIRED BY TECHNICAL SPECIFICATIONS; CALIBRATION OF MEASURING AND TEST EQUIPMENT USED ON SAFETY-RELATED SYSTEMS; AND SURVEILLANCE OF IN-PLANT EQUIPMENT REQUIRED BY TECHNICAL SPECIFICATIONS. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; TWO APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (INFRACTION - FAILURE TO FOLLOW SURVEILLANCE TEST PROCEDURE; AND DEFICIENCY - FAILURE TO REVIEW AND RETAIN INSTRUMENT CALIBRATION PROCEDURES).

INSPECTION DECEMBER 3-7 (79-86): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 28 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIOLOGICAL ENVIRONMENTAL MONITORING PROGRAM INCLUDING: MANAGEMENT CONTROL, QUALITY CONTROL OF ANALYTICAL MEASUREMENTS, INSPECTION OF ENVIRONMENTAL MONITORING STATIONS, REVIEW OF ENVIRONMENTAL MONITORING DATA, REVIEW OF RADIOLOGICAL ENVIRONMENTAL MONITORING PROCEDURES, AND IMPLEMENTATION OF THE MONITORING PROGRAM. OF THE SIX AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

NRC POWER RESTRICTIONS: NONE

LAST IE SITE INSPECTION DATE: 01/02-31/80♦

INSPECTION REPORT NO: 50-344/80-01♦

SUMMARY

INSPECTION SUMMARY:

- Inspection on December 1-31, 1979 (Report No. 50-344/79-24) Routine inspections of plant operations, maintenance, physical security, procurement, radiological waste operations, organization, audit and review, and followup on a Licensee Event Report. The inspection involved 75 inspector hours by a Regional Inspector and the NRC Resident Inspector.

  Results: No items of noncompliance or deviations were identified.

- Inspection on January 2-31, 1980 (Report No. 50-344/80-01) Report being prepared; to be reported next month.

- Inspection on January 21-23, 1980 (Report No. 50-344/80-02) Routine, unannounced inspection of quality assurance program, operator requalification program, response to IE Bulletins and Circulars, and followup on previous inspection items, also included independent inspection effort. The inspection involved 32 inspector hours onsite by two NRC inspectors.

  Results: Of the three areas inspected, one noncompliance item (Deficiency - Records of reactivity control manipulations) and two deviations (related to review of operator requalification program) were identified in one area. No items of noncompliance or deviations were identified in the other two areas inspected.

+ RETURNED TO SERVICE 2/8/80 FOLLOWING EXTENDED REFUELING OUTAGE THAT STARTED 12/1/79.

+ LAST IE SITE INSPECTION DATE: FEBRUARY 6, 1980

+ INSPECTION REPORT NO: 50-250/80-06

SUMMARY

INSPECTION SUMMARY

+ INSPECTION NOVEMBER 14-15 (79-32): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 7 INSPECTOR-HOURS ON SITE IN THE AREA OF IE BULLETIN 79-14, "SEISMIC ANALYSIS FOR AS-BUILT SAFETY RELATED PIPING SYSTEMS." NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 10-14 (79-34): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 28 INSPECTOR-HOURS ON SITE IN THE AREA OF PREVIOUS INSPECTION FINDINGS RELATING TO THE QUALITY ASSURANCE INSPECTION CONDUCTED ON MARCH 12-16 AND 19-21, 1979. THE FINDINGS OF THIS FOLLOWUP INSPECTION SHOW EVIDENCE THAT FP&L MANAGEMENT HAS INCREASED THEIR PARTICIPATION IN QUALITY ASSURANCE ACTIVITIES. MANAGEMENT SUPPORT OF QUALITY ASSURANCE ACTIVITIES AND PROCEDURE COMPLIANCE WAS EVIDENCED BY GENERAL OFFICE AND PLANT MANAGEMENT CORRESPONDENCE TO APPROPRIATE PERSONNEL. ACCEPTANCE OF THE INCREASED MANAGEMENT INVOLVEMENT WAS EVIDENCED BY PERSONNEL CONCERN REGARDING PROPER PROCEDURE IMPLEMENTATION AND ATTITUDE CHANGE OF QUALITY ASSURANCE, ENGINEERING DEPARTMENT, AND FIELD PERSONNEL.

INSPECTION NOVEMBER 1-30 (79-36): THIS ROUTINE INSPECTION INVOLVED 52 INSPECTOR-HOURS ON SITE IN THE AREAS OF PREPARATION FOR UNIT 3 REFUELING, PLANT PHYSICAL PROTECTION, SAFETY ASPECTS OF INADVERTENT SAFETY SYSTEM ACTUATIONS, PLANT OPERATIONS, FOLLOWUP ON REPORTABLE EVENTS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 11-14 (79-37): INCLUDED REVIEW OF THE LICENSEE'S RESPONSE TO IE BULLETIN 79-16; SECURITY PLAN; SECURITY ORGANIZATION; PHYSICAL BARRIERS (PROTECTED AREA); PHYSICAL BARRIERS (VITAL AREA); ACCES CONTROL (VITAL AREA); DETECTION AIDS; AND COMPENSATORY MEASURES. THE INSPECTION INVOLVED 13 INSPECTOR-HOURS ON SITE BY 1 NRC INSPECTOR. THE INSPECTION WAS BEGUN DURING AN OFFSHIFT PERIOD; 2 1/2 INSPECTION HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. THE LICENSEEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE EIGHT AREAS EXAMINED DURING THE INSPECTION.

INSPECTION DECEMBER 12-14 (79-38): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 10 INSPECTOR-HOURS ON SITE IN THE AREAS OF PIPE SUPPORT BASEPLATE DESIGNS USING CONCRETE EXPANSION ANCHOR BOLTS-PROCEDURES, WORK ACTIVITIES AND RECORDS; SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING-PROCEDURES, WORK ACTIVITIES AND RECORDS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 19-21 (79-39): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 14 INSPECTOR-HOURS ON SITE IN THE AREAS OF ADMINISTRATIVE CONTROLS INCLUDING ENVIRONMENTAL PROCEDURES AND ANNUAL AUDIT OF APPENDIX B TECHNICAL SPECIFICATIONS IMPLEMENTATION; REVIEW OF MONITORING, SURVEILLANCE AND SPECIAL STUDY PROGRAMS; REVIEW OF CHEMICAL AND THERMAL MONITORING OF PLANT COOLING WATER; REVIEW OF PLANT REPORTING REQUIREMENTS; REVIEW OF PREVIOUS INSPECTION FINDINGS; REVIEW OF LICENSEE EVENT REPORTS (LERS). OF THE SIX AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FIVE AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - APPROVAL OF PROCEDURES).

INSPECTION DECEMBER 1-20 (79-41): THIS ROUTINE INSPECTION INVOLVED 81 INSPECTOR-HOURS ON SITE IN THE AREAS OF RECEIPT OF NEW FUEL, REFUELING ACTIVITIES, PLANT OPERATIONS, MAINTENANCE ACTIVITIES, DEBRIS IN UNIT 3 STEAM GENERATORS, RADIATION PROTECTION-OPERATIONS. OF THE SIX AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FIVE AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO FOLLOW PROCEDURE).

INSPECTION DECEMBER 26-27 (79-42): NUCLEAR MATERIAL CONTROL AND ACCOUNTING PROCEDURES REVIEW; AUDIT OF RECORDS AND REPORTS; AND STORAGE AND INTERNAL CONTROL. THE INSPECTION INVOLVED 7 INSPECTOR-HOURS ON SITE BY ONE NRC INSPECTOR AND WAS BEGUN DURING THE REGULAR HOURS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS IN THE THREE AREAS EXAMINED DURING THE INSPECTION.

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-030/ 03L-0	10/04/79	11/05/79	30 DAY LER	RADIATION MONITORS R11 AND R12 OUT OF SERVICE FOR 2½ HOURS.

INSPECTION REPORT NO: 50-251/80-06

SUMMARY

INSPECTION SUMMARY

INSPECTION NOVEMBER 14-15 (79-32): THIS ROUTINE ANNOUNCED INSPECTION INVOLVED 7 INSPECTOR-HOURS ON SITE IN THE AREA OF IE BULLETIN 79-14, "SEISMIC ANALYSIS FOR AS-BUILT SAFETY RELATED PIPING SYSTEMS." NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 10-14 (79-34): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 28 INSPECTOR-HOURS ON SITE IN THE AREA OF PREVIOUS INSPECTION FINDINGS RELATING TO THE QUALITY ASSURANCE INSPECTION CONDUCTED ON MARCH 12-16 AND 19-21, 1979. THE FINDINGS OF THIS FOLLOWUP INSPECTION SHOW EVIDENCE THAT FP&L MANAGEMENT HAS INCREASED THEIR PARTICIPATION IN QUALITY ASSURANCE ACTIVITIES. MANAGEMENT SUPPORT OF QUALITY ASSURANCE ACTIVITIES AND PROCEDURE COMPLIANCE WAS EVIDENCED BY GENERAL OFFICE AND PLANT MANAGEMENT CORRESPONDENCE TO APPROPRIATE PERSONNEL. ACCEPTANCE OF THE INCREASED MANAGEMENT INVOLVEMENT WAS EVIDENCED BY PERSONNEL CONCERN REGARDING PROPER PROCEDURE IMPLEMENTATION AND ATTITUDE CHANGE OF QUALITY ASSURANCE, ENGINEERING DEPARTMENT, AND FIELD PERSONNEL.

INSPECTION NOVEMBER 1-30 (79-36): THIS ROUTINE INSPECTION INVOLVED 52 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT PHYSICAL PROTECTION, SAFETY ASPECTS OF INADVERTENT SAFETY SYSTEM ACTUATIONS, PLANT OPERATIONS, FOLLOWUP ON REPORTABLE EVENTS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 11-14 (79-37): INCLUDED REVIEW OF THE LICENSEE'S RESPONSE TO IE BULLETIN 79-16; SECURITY PLAN; SECURITY ORGANIZATION; PHYSICAL BARRIERS (PROTECTED AREA); PHYSICAL BARRIERS (VITAL AREA); ACCESS CONTROL (VITAL AREA); DETECTION AIDS; AND COMPENSATORY MEASURES. THE INSPECTION INVOLVED 13 INSPECTOR-HOURS ON SITE BY ONE NRC INSPECTOR. THE INSPECTION WAS BEGUN DURING AN OFFSHIFT PERIOD; 2 1/2 INSPECTION HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE EIGHT AREAS EXAMINED DURING THE INSPECTION.

INSPECTION DECEMBER 12-14 (79-38): THIS ROUTINE UNANNOUNCED INSPECTION INVOLVED 9 INSPECTOR-HOURS ON SITE IN THE AREAS OF PIPE SUPPORT BASEPLATE DESIGNS USING CONCRETE EXPANSION ANCHOR BOLTS-PROCEDURES, WORK ACTIVITIES AND RECORDS; SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING-PROCEDURES, WORK ACTIVITIES AND RECORDS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 19-21 (79-39): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 14 INSPECTOR-HOURS ON SITE IN THE AREAS OF ADMINISTRATIVE CONTROLS INCLUDING ENVIRONMENTAL PROCEDURES AND ANNUAL AUDIT OF APPENDIX B TECHNICAL SPECIFICATIONS IMPLEMENTATION; REVIEW OF MONITORING, SURVEILLANCE AND SPECIAL STUDY PROGRAMS; REVIEW OF CHEMICAL AND THERMAL MONITORING OF PLANT COOLING WATER; REVIEW OF PLANT REPORTING REQUIREMENTS; REVIEW OF PREVIOUS INSPECTION FINDINGS; REVIEW OF LICENSEE EVENT REPORTS (LERS). OF THE SIX AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FIVE AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - APPROVAL OF PROCEDURES).

INSPECTION DECEMBER 1-20 (79-41): THIS ROUTINE INSPECTION INVOLVED 37 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, MAINTENANCE ACTIVITIES, UNIT 4 REACTOR TRIPS, RADIATION PROTECTION-OPERATIONS. OF THE FOUR AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN THREE AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO FOLLOW PROCEDURES).

INSPECTION DECEMBER 26-27 (79-42): NUCLEAR MATERIAL CONTROL AND ACCOUNTING PROCEDURES REVIEW; AUDIT OF RECORDS AND REPORTS; AND STORAGE AND INTERNAL CONTROL. THE INSPECTION INVOLVED 7 INSPECTOR-HOURS ON SITE BY ONE NRC INSPECTOR AND WAS BEGUN DURING THE REGULAR HOURS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS IN THE THREE AREAS EXAMINED DURING THE INSPECTION.

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- None

FACILITY ITEMS (PLANS AND PROCEDURES):

- The plant was placed in cold shutdown on 1/31/80 in conformance with the NRC's Show Cause Order dated 1/2/80. Modifications were completed to achieve full compliance with NUREG 0578 (Category A) items. Automatic Depressurization System air supply check valves were replaced and leak tested as followup actions associated with IE Bulletin 80-01. The plant returned to power operation on 2/4/80.

MANAGERIAL ITEMS:

None

PLANT STATUS:

- Shutdown on 01/31/80 for modifications.

- LAST IE SITE INSPECTION DATE: 2/8/80
- INSPECTION REPORT NO: 50-271/80-02

SUMMARY

INSPECTION SUMMARY

- 50-271/79-20 - Nov 19-21: Routine, unannounced inspection by a region based inspector (21 hours) of pipe support and restraint system surveillance and the Inservice Inspection Program for Class 1 and 2 restraints. Noncompliances: None.
- 50-271/80-01 - Jan 10: Management meeting held at NRC request to discuss details related to the establishment of an onsite office for the purpose of placing two full time NRC inspectors at the facility. All parties concurred on administrative and operational considerations needed to establish an onsite NRC resident office.

INSPECTION STATUS

ENFORCEMENT STATUS

SECTION 4.16, TABLE 4.16-1, ITEM 3, OF APPENDIX A TECHNICAL SPECIFICATIONS REQUIRES THAT FISH SHALL BE COLLECTED SEMI-ANNUALLY AND GAMMA ISOTOPIC ANALYSIS OF THE FISH BE CONDUCTED. CONTRARY TO THE ABOVE, THE LICENSEE FAILED TO COLLECT FISH THE SECOND HALF OF 1978 AND CONDUCT THE REQUIRED ANALYSIS.
(7907 INFRACTION)

THE OBJECTIVE OF SECTION 4.16 OF APPENDIX A TECHNICAL SPECIFICATIONS REQUIRES THE LICENSEE TO ESTABLISH A RADIOLOGICAL MONITORING PROGRAM ADEQUATE TO MEASURE CHANGES IN THE LEVELS OF ENVIRONMENTAL RADIOACTIVITY DUE TO PLANT EFFLUENTS. CONTRARY TO THE ABOVE, THE LICENSEE FAILED TO PLACE THE THERMOLUMINESCENT DOSIMETERS (TLD) AT ONSITE STATIONS NOS. 1 AND 3 ADEQUATELY IN THAT THE MONITORING OF THE TLD MATERIAL PRECLUDED MEASUREMENT OF XE-133 AND OTHER PLANT EFFLUENTS.
(7907 DEVIATION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

+ Unit 1 feedwater nozzle and pipe repair continues. Unit 1 turbine motor removed due to cracks completed. Unit 1 Bergen-Paterson steam generator snubbers removed and sent to Wyle Laboratories for testing following removal of fluid leaks and gauled insides. Unit 1 remained in cold shutdown the entire reporting period. (79-27)

PLANT STATUS

+ The unit was shut down on October 6, 1979 to begin a scheduled 8-week refueling/maintenance outage. The outage schedule has been extended by about 9 weeks due to the system and component problems discussed above. The tentative startup date is February 4, 1980.

+LAST IE SITE INSPECTION DATE: November 6 through December 21, 1979

+ INSPECTION REPORT NO: 79-27

SUMMARY

INSPECTION SUMMARY

+ Inspection on September 26-27; October 3-4, 22-23 and November 7-9, (79-21): Follow up to IE Bulletin No. 79-02, pipe support base plate designs using concrete expansion ancher bolts; review of test program and procedures; observation of testing anchor bolts; and review of quality records. The inspection involved 68 inspector hours onsite by one NRC inspector. No items of noncompliance were identified in the areas inspected.

+ Inspection on November 6 through December 21, (79-27): Routine resident inspection of plant operations, maintenance radiation protection, IE Bulletins and Circulars, licensed operator requalification training, rad waste system operation, design changes and modifications, surveillance testing on Unit 1, security and non-routine events. The inspection involved 156 inspector hours onsite by one NRC inspector. Of the areas inspected, no items of noncompliance were identified.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-92/ 03L-0	12/06/79	01/04/80	30 Day LER	Rad monitor ORT-PR02B alarmed when the indicator needle read below the alarm setpoint.
79-93/ 03L-0	12/25/79	01/24/80	30 Day LER	Radioactivity analysis of fire sump discharge sample overlooked while both units were in cold shutdown.
79-96/ 01T-0	12/28/79	01/07/80	14 Day LER	pH of effluents in condenser cooling water was not within TS.

3	01/24/80	F	3.9	G	3				REACTOR TRIP/TURBINE TRIP CAUSED BY A LO-LO LEVEL IN COINCIDENT WITH SF/FF MISMATCH.

SUMMARY

THE UNIT CAME ON LINE ON 01/20/80 FROM AN OUTAGE TO REPAIR FEEDWATER NOZZLES PER NRC BULLETIN 79-13. ON 01/24/80, A REACTOR TRIP WAS CAUSED BY FAILURE OF THE 2A ROD DRIVE MOTOR GENERATOR SETS, CAUSING AN OVERCURRENT CONDITION. A TURBINE /REACTOR TRIP OCCURRED THE SAME DAY FROM LOW STEAM GENERATOR LEVEL COINCIDENT WITH STEAM FLOW/FEED FLOW MISMATCH.

Morris Operations		750 MTU (j)	310	390 MTU (j)	1490 MTU (j)		
NFS(i)		250 MTU	170 MTU	80 MTU			

(a) At each refueling outage approximately 1/3 of a PWR core and 1/4 of a BWR core is off-loaded.
(b) Some of these dates have been adjusted by staff assumptions.
(c) This is the total for both units.
(J) Plant not in commercial operation.
(e) Some spent fuel stored at Brunswick.
(f) Authorized a total 2088 BWR and 304 PWR assemblies for both pools.
(g) Robinson 2 assemblies being shipped to Brunswick for storage.
(h) Capacity is in metric tons of uranium; 1 MTU = 2 PWR assemblies or 5 BWR assemblies.
(i) No longer accepting spent fuel.
(j) Racked for 700 MTU.
(k) Reserved
(l) This is the station total.

N/S = Not Scheduled Yet

REACTOR-YEARS OF EXPERIENCE

The total of Reactor years of experience is as the sum of all calendar days for each unit, from the date that electricity was first generated until a final shutdown date or the status date, whichever comes first, divided by 365.25 days/year.

If a date is unknown, the first day of the first month of operation is substituted. Units which have not yet generated electricity but which are licensed are listed but not included in the computation.

(INFORMATION INCLUDES BOTH LICENSED AND NON–LICENSED ELECTRICAL UNITS).

LICENSED OPERATING ELECTRICAL PRODUCING UNITS

UNIT NAME	FIRST ELEC. GENERATION	YEARS EXPERIENCE

PEACH BOTTOM 1	01/27/67	11/01/74	7.76
PIQUA	11/04/63	01/01/66	2.16
THREE MILE ISLAND 2*	04/21/78	03/28/79	.93
TOTAL			56.23 YEARS

*NOTE: HUMBOLDT BAY AND THREE MILE ISLAND 2 HAVE BEEN CHANGED FROM THE CATEGORY OF "LICENSED OPERATING ELECTRICAL PRODUCING UNITS" TO THE CLASSIFICATION OF A "PERMANENTLY OR INDEFINITELY SHUTDOWN UNITS". FOR THE COMPUTATION OF REACTOR YEARS OF EXPERIENCE, THEIR EFFECTIVE SHUTDOWN OR ELECTRICAL CESSATION DATE IS AS LISTED. BECAUSE, IN PREVIOUS EDITIONS, THESE TWO UNITS HAD BEEN CONSIDERED TO BE OPERATING UNITS, THE TOTAL YEARS OF OPERATING EXPERIENCE WILL NOT BE CONSISTENT WITH THE VALUE PUBLISHED FOR NOVEMBER 1, 1979.

LICENSED OPERATING REACTORS

AUTHORIZATION AND CLEARANCE

THE U.S. NUCLEAR REGULATORY COMMISSION'S OFFICE OF MANAGEMENT AND PROGRAM ANALYSIS PUBLISHES THIS MONTHLY STATUS REPORT "AS PART OF THE REPORTING REQUIREMENTS IN SECTION 50.36 OF 10 CFR PART 50 UNDER GAO CLEARANCE NUMBER B-180225, WITH AN EXPIRATION DATE OF SEPTEMBER 30, 1981," AS STATED IN THE OCTOBER 3, 1978 LETTER FROM JOHN M. LOVELADY, ASSISTANT DIRECTOR, GENERAL GOVERNMENT DIVISION, U. S. GENERAL ACCOUNTING OFFICE, TO J.M. FELTON, DIRECTOR, DIVISION OF RULES AND RECORDS, U.S. NUCLEAR REGULATORY COMMISSION.

STATEMENT OF PURPOSE

The U. S. Nuclear Regulatory Commission's monthly OPERATING UNITS STATUS REPORT — LICENSED OPERATING REACTORS, provides data on the operation of nuclear units as timely and accurately as possible. This information is collected by the Office of Management and Program Analysis from the Headquarters Staff of NRC's Office of Inspection and Enforcement, from NRC's Regional Offices, and from utilities. Since all of the data concerning operation of the units is provided by the utility operators less than two weeks after the end of the month, necessary corrections to published information are shown on the ERRATA page.

This report is divided into three sections: the first contains monthly highlights and statistics for commercial operating units, and errata from previously reported data; the second is a compilation of detailed information on each unit, provided by NRC Regional Offices and IE Headquarters; and the third section is an appendix containing nuclear availability and capacity factors, forced outage rate statistics, spent fuel storage capability, reactor-years of experience and non-power reactors in the United States.

Throughout the report, statistical factors for periods greater than a report month, or for more than one unit, are computed as the arithmetic average of each unit's individual operating statistics. The statistical factors for each unit for the report month are computed from actual power production for the month. The factors for the life-span of each unit (the "Cumulative" column) are reported by the utility and are not entirely re-computed by NRC. Utility power production data is checked for consistency with previously submitted statistics.

It is hoped this status report proves informative and helpful to all agencies and individuals interested in analyzing trends in the nuclear industry which might have safety implications, or in maintaining an awareness of the U. S. energy situation as a whole.

SECTION 3 – APPENDIX

STATUS OF SPENT FUEL STORAGE CAPABILITY 3-2
REACTOR-YEARS OF EXPERIENCE 3-3
NON-POWER REACTORS IN THE U.S. 3-4

GLOSSARY

AVERAGE DAILY POWER LEVEL (MWe)	The net electrical energy generated during the day (measured from 0001 to 2400 hours inclusive) in megawatts hours divided by 24 hours.
LICENSED THERMAL POWER (MWt)	The maximum thermal power of the reactor authorized by the NRC, expressed in megawatts.
DATE OF COMMERCIAL OPERATION	Date unit was declared by utility owner to be available for the regular production of electricity; usually related to satisfactory completion of qualification tests as specified in the purchase contract and to accounting policies and practices of utility.
DESIGN ELECTRICAL RATING (DER) (Net MWe)	The nominal net electrical output of the unit specified by the utility and used for the purpose of plant design.
FORCED OUTAGE	An outage required to be initiated no later than the weekend following discovery of an off-normal condition.
FORCED OUTAGE HOURS	The clock hours during the report period that a unit is unavailable due to forced outages.
GROSS ELECTRICAL ENERGY GENERATED (MWH)	Electrical output of the unit during the report period as measured at the output terminals of the turbine generator, in megawatts hours.
GROSS HOURS	The clock hours from the beginning of a specified situation until its end. For outage durations, the clock hours during which the unit is not in power production.
GROSS THERMAL ENERGY GENERATED (MWH)	The thermal energy produced by the unit during the report period as measured or computed by the licensee in megawatt hours.
HOURS GENERATOR ON-LINE	Also, "Unit Service Hours." The total clock hours in the report period during which the unit operated with breakers closed to the station bus. These hours added to the total outage hours experienced by the unit during the report period, shall equal the hours in the report period.
HOURS IN REPORTING PERIOD	For units in power ascension at the end of the period, the gross hours from the beginning of the period or the first electrical production, whichever comes last, to the end of the period. For units in commercial operation at the end of the period, the gross hours from the beginning of the period or of commercial operation, whichever comes last, to the end of the period or decommissioning, whichever comes first.
HOURS REACTOR CRITICAL	The total clock hours in the report period during which the reactor sustained a controlled chain reaction.
MAXIMUM DEPENDABLE CAPACITY (GROSS) (MDC Gross) (Gross MWe)	Dependable main-unit gross capacity, winter or summer, whichever is smaller. The dependable capacity varies because the unit efficiency varies during the year due to cooling water temperature variations. It is the gross electrical output as measured at the output terminals of the turbine generator during the most restrictive seasonal conditions (usually summer).
MAXIMUM DEPENDABLE CAPACITY (NET) (MDC Net) (Net MWe)	Maximum Dependable Capacity (Gross) less the normal station service loads.
NAMEPLATE RATING (Gross MWe)	The nameplate power designation of the generator in megavolt amperes (MVA) times the nameplate power factor of the generator. NOTE: The nameplate rating of the generator may not be indicative of the maximum or dependable capacity, since some other item of equipment of a lesser rating (e.g., turbine) may limit unit output.
NET ELECTRICAL ENERGY GENERATED	Gross electrical output of the unit measured at the output terminals of the turbine generator during the reporting period, minus the normal station service electrical energy utilization. If this quantity is less than zero, a negative number should be recorded.
OUTAGE	A situation in which no electrical production takes place.
OUTAGE DATE	As reported on Appendix D of Reg. Guide 1.16, the date of the start of the outage. If continued from a previous month, report the same outage date but change "Method of Shutting Down Reactor" to "4 (Other)" and add a note: "Continued from previous month."
OUTAGE DURATION	The total clock hours of the outage measured from the beginning of the report period or the outage, whichever comes last, to the end of the report period or the outage, whichever comes first.
OUTAGE NUMBER	A number unique to the outage assigned by the licensee. The same number is reported each month in which the outage is in progress. One format is "76-05" for the fifth outage to occur in 1976.
PERIOD HOURS	See "Hours in Reporting Period."
POWER REDUCTION	A reduction in the Average Daily Power Level of more than 20% from the previous day. All power reductions are defined as outage of zero hours durations for the purpose of computing unit service and availability factors, and forced outage rate.
REACTOR AVAILABLE HOURS	The total clock hours in the report period during which the reactor was critical or was capable of being made critical. (Reactor Reserve Shutdown Hours + Hours Reactor Critical.)
REACTOR AVAILABILITY FACTOR	$\frac{\text{Reactor Available Hours} \times 100}{\text{Period Hours}}$
REACTOR RESERVE SHUTDOWN	The cessation of criticality in the reactor for administrative or other similar reasons when operation could have been continued.
REACTOR RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the reactor is in reserve shutdown mode. NOTE: No credit is given for NRC imposed shutdowns.
REACTOR SERVICE FACTOR	$\frac{\text{Hours Reactor Critical} \times 100}{\text{Period Hours}}$
REPORT PERIOD	Usually, the preceding calendar month. Can also be the preceding calendar year, (Year-to-Date), or the life-span of a unit (cumulative).
RESTRICTED POWER LEVEL	Maximum net electrical generation to which the unit is restricted during the report period due to the state of equipment, external conditions, administrative reasons, or a direction by NRC.
SCHEDULED OUTAGE	Planned removal of a unit from service for refueling, inspection, training, or maintenance. Those outages which do not fit the definition of "Forced Outage" perforce are "Scheduled Outages."
STARTUP AND POWER ASCENSION TEST PHASE	Period following initial criticality during which the unit is tested at successively higher levels, culminating with operation at full power for a sustained period and completion of warranty runs. Following this phase, the utility generally considers the unit to be available for commercial operation.
UNIT	The set of equipment uniquely associated with the reactor, including turbine generators, and ancillary equipment, considered as a single electrical energy production facility.
UNIT AVAILABLE HOURS	The total clock hours in the report period during which the unit operated on-line or was capable of such operation. (Unit Reserve Shutdown Hours + Hours Generator On-Line.)
UNIT AVAILABILITY FACTOR*	$\frac{\text{Unit Available Hours} \times 100}{\text{Period Hours}}$
UNIT CAPACITY FACTORS	
– Using Licensed Thermal Power	$\frac{\text{Gross Thermal Energy Generated} \times 100}{\text{Period Hours} \times \text{Lic. Thermal Power}}$
– Using Nameplate Rating	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{Nameplate Rating}}$
– Using DER	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{DER}}$
– Using MDC Gross	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Gross}}$
– Using MDC Net	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Net}}$

NOTE: If MDC Gross and/or MDC Net have not been determined, the DER is substituted for this quantity for Unit Capacity Factor calculations.

UNIT FORCED OUTAGE RATE	$\frac{\text{Forced Outage Hours}}{\text{Unit Service Hours} + \text{Forced Outage Hours}}$
UNIT RESERVE SHUTDOWN	The removal of the unit from on-line operation for economic or other similar reasons when operation could have been continued.
UNIT RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the unit was in reserve shutdown mode.
UNIT SERVICE FACTOR	$\frac{\text{Unit Service Hours} \times 100}{\text{Period Hours}}$
UNIT SERVICE HOURS	See "Hours Generator On-Line."

SECTION 1 – CURRENT DATA SUMMARIES

MONTHLY HIGHLIGHTS OF COMMERCIAL NUCLEAR POWER UNITS

FOR MONTH OF

FEBRUARY 1980

LICENSED POWER REACTORS:

NUMBER		CAPACITY [1] MWe (Net)
66	IN COMMERCIAL OPERATION	48,135
1	NOT IN COMMERCIAL OPERATION	912
67 [2]	LICENSED TO OPERATE	49,047
1 [3]	LICENSED FOR FUEL LOADING AND LOW POWER TESTING	

POWER GENERATION	REPORT MONTH	PREVIOUS MONTH	YEAR-TO-DATE
1. GROSS ELECTRICAL (MWHE)	20,287,108	20,039,154	40,326,262
2. NET ELECTRICAL (MWHE)	19,331,056	19,087,131	38,418,187
3. AVG. UNIT SERVICE FACTOR (%)	63.1	61.6	62.4
4. AVERAGE UNIT AVAILABILITY FACTOR (%)	63.1	62.0	62.6
5. AVERAGE UNIT CAPACITY FACTOR (MDC) (%)	56.4	54.6	55.5
6. AVG. UNIT CAPACITY FACTOR (DER) (%)	54.9	53.3	54.1
7. FORCED OUTAGE RATE (%)	10.4	8.5	9.6

NOTES

[1] BASED UPON MAXIMUM DEPENDABLE CAPACITY; DESIGN ELECTRIC RATING USED IF MDC NOT DETERMINED.

[2] EXCLUDES INDIAN POINT 1 (DER = 265), HUMBOLDT BAY (DER = 65), AND THREE MILE ISLAND 2 (DER = 906) WHICH HAVE OPERATING LICENSES BUT ARE SHUTDOWN INDEFINITELY.

[3] SEQUOYAH 1 (DER = 1129) WAS LICENSED ON FEBRUARY 29, 1980 FOR FUEL LOADING AND LOW POWER TESTING ONLY.

ACTUAL VS. POTENTIAL ENERGY PRODUCTION

			% OF POTENTIAL PRODUCTION
POTENTIAL ENERGY PRODUCTION IN THIS PERIOD BY UNITS IN COMMERCIAL OPERATION (Using Maximum Dependable Capacity Net)		33,468,552 MWHe	
ENERGY ACTUALLY PRODUCED DURING THIS REPORT PERIOD	=	19,331,056 MWHe NET	57.7
ENERGY NOT PRODUCED DURING THIS REPORT PERIOD DUE TO SCHEDULED OUTAGES (NET)	=	8,723,005 MWHe	26.1
ENERGY NOT PRODUCED DURING THIS REPORT PERIOD DUE TO FORCED OUTAGES (NET)	=	3,076,751 MWHe	9.2
ENERGY NOT PRODUCED DURING THIS REPORT PERIOD FOR OTHER REASONS (NET)	=	2,337,739 MWHe	7.0
TOTAL		33,468,551 MWHe =	100%
ENERGY NOT PRODUCED THIS REPORT PERIOD DUE TO NRC IMPOSED SHUTDOWNS AND RESTRICTIONS	=	2,276,614 MWHe	6.8
NUMBER OF UNITS WITH POWER RESTRICTIONS IMPOSED BY NRC	=	1	

OUTAGE DATA

	NUMBER	HOURS	PERCENT OF CLOCK TIME	MWHE LOST PRODUCTION
1. FORCED OUTAGES DURING MONTH	58	4,140.8	9.0	3,076,751
2. SCHEDULED OUTAGES DURING THE MONTH	39	12,826.7	27.9	8,723,005
3. TOTAL	97	16,967.5	36.9	11,799,757

MWHE LOST PRODUCTION = Down time x maximum dependable capacity net

2. COMPUTED BY RATIO OF VENDOR TOTALS

	GE BWR's	W PWR's	CE PWR's	B&W PWR's	All PWR's
NET ELECTRICAL PRODUCTION	7,156,005	7,942,536	1,868,473	2,297,430	12,108,439
MDC NET	17,351	18,428	5,178	6,737	30,343
CFMDC	59.3	61.9	51.8	49.0	57.3

Capacity factor in this page, denoted as CFMDC, is a function of the net maximum dependable capacity. See the corresponding definition in the Glossary. The vendor averages are computed by the formula :

$$\frac{\text{Net Electrical Energy Produced by Vendor}}{\text{Potential Electrical Production By Vendor In This Month}} \times 100\%$$

Units Excluded	Reason for Exclusion
Indian Point 1 Humboldt Bay Three Mile Island 2	Unit Shutdown Indefinitely
Arkansas 2	Not in Commercial Operation
Big Rock Point	Not Representative of Typical BWRs
LaCrosse	Not Representative of Typical BWRs and Atypical Vendor
Fort St. Vrain	Atypical Vendor and Reactor Design

AVERAGE DAILY POWER LEVEL FOR ALL COMMERCIALLY OPERATING UNITS

This chart depicts the average daily power level for the units in commercial operation during the month.

The straight line on the graph labelled "SUM OF MAX DEP CAP'S" is plotted at the value shown by summing the separate maximum dependable capacities of the commercially operating units (in Net MWe). The plot shown below the line is calculated by summing the separate average daily power levels of the commercially operating units for each day of the month.

The scale on the left vertical axis runs in 1,000 MWe increments from 0 to 55,000 MWe (Net). The right vertical axis shows the percentage in 10% increments, up to 100% of the "SUM OF MAX DEP CAP'S."

It should be recognized that the 100% line would be obtainable only if all of the commercially operating units operated at 100% capacity, 24 hours per day, for the entire month. In other words, since any power generator must occasionally shut down to refuel and/or perform needed maintenance, and also since 100% capacity production is not always required by power demands, the 100% line is a theoretical goal and not a practical one.

SUMMARY

INSPECTION SUMMARY

+ INSPECTION CONDUCTED DURING THE PERIOD OF JANUARY 7-18, 1980 (80-01): ROUTINE, UNANNOUNCED INSPECTION OF PREVIOUSLY IDENTIFIED ITEMS, AND CONTROL OF DESIGN AND DESIGN CHANGES AND MODIFICATIONS. WITHIN THE TWO AREAS INSPECTED, TWO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED (INFRACTION & DEFICIENCY - FAILURE TO COMPLY WITH APPENDIX B TO 10 CFR 50.)

INSPECTION CONDUCTED DURING PERIOD OF DECEMBER 22, 1979 - JANUARY 21 1980 (80-02): ROUTINE, ANNOUNCED INSPECTION OF PLANT PROCEDURES AND ROUTINE PLANT OPERATIONS. WITHIN THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED.

INSPECTION CONDUCTED DURING THE PERIOD OF JANUARY 22 - FEBRUARY 21, 1930 (80-03): ROUTINE, ANNOUNCED INSPECTION OF PLANT OPERATIONS, TEST AND MEASURING EQUIPMENT PROGRAM, FOLLOW-UP ON PREVIOUSLY IDENTIFIED ITEMS, IMPLEMENTATION OF TMI LESSONS LEARNED REQUIREMENTS, FOLLOW-UP ON 10 CFR PART 21 REPORTS, AND MAINTENANCE. THE INSPECTION INVOLVED 149 INSPECTOR-HOURS ON-SITE BY FOUR NRC INSPECTORS. WITHIN THE SIX AREAS INSPECTED, ONE ITEM OF NONCOMPLIANCE WAS IDENTIFIED (INFRACTION - FAILURE TO CONTROL ACCESS TO A HIGH RADIATION AREA.)

79-06	12/31/79	S	207.2	D	4		CH	INSTRU	COMMITTMENT TO NRC TO PROVIDE TMI II RELATED MODIFICATIONS.

SUMMARY

THE UNIT REMAINED SHUTDOWN UNTIL 02/09/80 FOR TMI-RELATED MODIFICATIONS. THE LOW PRESSURE TURBINE "B" WAS MODIFIED DUE TO CRACKS IN THE TURBINE ROTOR DURING THE OUTAGE. BECAUSE OF THIS, THE UNIT OPERATED UNDER A WESTINGHOUSE-IMPOSED RESTRICTION OF 780 MWE (GROSS) UNTIL 02/15/80. A BRIEF LOAD REDUCTION OCCURRED ON 02/14/80 WHEN THE NO. 1 GOVERNOR VALVE STEM ON THE HIGH PRESSURE TURBINE FAILED. OPERATION WAS ROUTINE THE REMAINDER OF THE REPORT, WITH POWER LIMITED TO 805 MWE BECAUSE OF THE MODIFICATION TO THE LOW PRESSURE TURBINE "B" BLOCKING.

SUMMARY

INSPECTION SUMMARY

INSPECTION CONDUCTED DURING THE PERIOD OF JANUARY 7-18, 1980 (80-01): ROUTINE, UNANNOUNCED INSPECTION OF PREVIOUSLY IDENTIFIED ITEMS, AND CONTROL OF DESIGN AND DESIGN CHANGES AND MODIFICATIONS. WITHIN THE TWO AREAS INSPECTED, TWO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED (INFRACTION & DEFICIENCY - FAILURE TO COMPLY WITH APPENDIX B TO 10 CFR 50.)

INSPECTION CONDUCTED DURING PERIOD OF DECEMBER 22, 1979 - JANUARY 21, 1980 (80-02): ROUTINE, ANNOUNCED INSPECTION OF PLANT PROCEDURES AND POWER ASCENSION TESTING. WITHIN THE TWO AREAS INSPECTED ONE ITEM OF NONCOMPLIANCE WAS IDENTIFIED (INFRACTION - FAILURE TO ADHERE TO PROCEDURE.)

INSPECTION CONDUCTED DURING PERIOD OF JANUARY 22, 1980 - FEBRUARY 21, 1980 (80-03): ROUTINE, ANNOUNCED INSPECTION OF PLANT OPERATIONS REVIEW, TEST AND MEASURING EQUIPMENT PROGRAM, FOLLOW-UP ON PREVIOUSLY IDENTIFIED ITEMS, IMPLEMENTATION OF TMI LESSONS LEARNED REQUIREMENTS, FOLLOW-UP ON 10 CFR PART 21 REPORTS, MAINTENANCE, POWER ASCENSION TEST WITNESSING, REVIEW OF POWER ASCENSION TEST DATA, AND REVIEW OF LICENSEE'S AUTHORIZATION TO RAISE POWER. THE INSPECTION INVOLVED 206 INSPECTOR-HOURS ON-SITE BY FOUR NRC INSPECTORS. WITHIN THE NINE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TECHNICAL SPECIFICATION 6.8.1.A, REGULATORY GUIDE 1.33, NOVEMBER 1972, THE BVPS OPERATING MANUAL SECTION 1.43.4, REVISION 4, PROCEDURES FOR THE OPERATION AND CALIBRATION OF PROCESS RADIATION MONITORING EQUIPMENT WERE NOT PROPERLY ESTABLISHED AND IMPLEMENTED, IN THAT: 1) RADCON MANUAL FORM NO. RCM-F229 INCLUDED INCORRECT ACCEPTANCE CRITERIA FOR THE SAMPLE FLOW RATES REQUIRED TO BE MAINTAINED ON SEVEN GASEOUS AND/OR PARTICULATE RADIATION MONITORS AND WAS THE DOCUMENT IN USE FOR PERIODIC CHECKS AND ADJUSTMENT OF THESE FLOWRATES; 2) DATA COLLECTED ON FORM RCM-F229 DURING THE PERIOD OF OCTOBER 3 - NOVEMBER 28, 1979 DOCUMENTS OPERATION OF EIGHT RADIATION MONITORS AT SAMPLE FLOW RATES WHICH DID NOT MEET THEIR RESPECTIVE ACCEPTANCE CRITERIA WITH NO CORRECTIVE ACTION CONSISTENTLY IMPLEMENTED; AND, 3) NEITHER PROCEDURES NOR APPROPRIATE SETPOINTS HAVE BEEN ESTABLISHED FOR THE CALIBRATION AND MAINTENANCE OF RADIATION MONITOR SAMPLE FLOW ALARM EQUIPMENT.
(7924 INFRACTION)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION VI, BVPS FSAR, APPENDIX A, SECTION A.2.2.6; QA PROCEDURE OP-8, REVISION 4, SECTION 3.3.4; AND THE BVPS MAINTENANCE MANUAL, CHAPTER 1, SECTION 7, REVISION 6. ON AUGUST 28, 1979 CALIBRATION OF RCS HOT LEG RTD AMPLIFIER TM-RC-432H WAS PERFORMED UTILIZING DATA FROM AN INSTRUMENT CALIBRATION DATA SHEET, FORM 147, WHICH HAD NOT BEEN REVIEWED, APPROVED, OR DISTRIBUTED AS A REVISION OR ON-THE-SPOT CHANGE TO MAINTENANCE SURVEILLANCE PROCEDURE NO. 6.40 IN ACCORDANCE WITH THE ABOVE REQUIREMENTS.
(7924 INFRACTION)

ON NOVEMBER 27, 1979, **APPROVED A SWITCHING ORDER** FOR A MAINTENANCE WORK REQUEST WITHOUT VERIFYING THAT ALL REDUNDANT ENGINEERED SAFETY FEATURE SYSTEMS WERE AVAILABLE IN THAT THE APPROVED MAINTENANCE WORK RENDERED BOTH ECCS SUBSYSTEMS INOPERABLE FROM APPROXIMATELY 8:30 A.M. TO 10:30 A.M.
(7930 VIOLATION)

ON NOVEMBER 27, 1979, **APPROVED AN EQUIPMENT** CLEARANCE PERMIT ASSOCIATED WITH A MAINTENANCE WORK REQUEST WITHOUT VERIFYING THAT ALL REDUNDANT ENGINEERED SAFETY FEATURE SYSTEMS WERE AVAILABLE IN THAT THE APPROVED CLEARANCE PERMIT RENDERED BOTH ECCS SUBSYSTEMS INOPERABLE FROM APPROXIMATELY 8:30 A.M. TO 10:30 A.M.
(7930 VIOLATION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

FACILITY ITEMS (PLANS AND PROCEDURES):

- Refueling/modification outage commenced on 11/30/79. The outage is expected to last until 7/80.

MANAGERIAL ITEMS:

A partial reorganization of station and corporate departments began on 12/16/79, and is substantially complete, pending further personnel assignments and approval of revised Tech. Specs.

PLANT STATUS:

- Refueling completed on 3/1/80. In-service inspection, modifications and maintenance will continue through current outage.

- LAST IE SITE INSPECTION DATE: 3/7/80

- INSPECTION REPORT NO: 50-334/80-06

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-148/ 03L	12/10/79	02/07/80	30 Day LER	Dessicant bag in engine mounted fuel tank blocked suction line to diesel electric fuel pump
80-002/ 01T	01/17/80	01/30/80	14 Day LER	While in mode 5 with RCS level at mid-span in the loops suction was lost to all RHR pumps due to air binding

SUMMARY

INSPECTION SUMMARY

- 50-334/80-02 - Jan 8-11: Routine, unannounced inspection by one region-based inspector (29.5 hours). Inspection areas (3): inservice inspection (ISI) activities including ISI program review, review of implementing NDE procedures and ISI data review; activities associated with design change modifications; and licensee action on previous inspection findings. Noncompliances (1) (failure to review and approve NDE procedure prior to its implementation).
- 50-334/80-04 - Jan 22: Special public enforcement meeting convened by the Director, Office of Inspection and Enforcement, to discuss the licensee's actions pursuant to an Order Modifying License issued on December 5, 1979. The meeting was attended by senior licensee and NRC:OIE management and the public. A subsequent question and answer session was held to provide NRC responses to public concerns.

OTHER ITEMS OF INTEREST

FACILITY ITEMS

+ The Plant was shutdown the first two weeks of January 1980 to complete short term lessons learned commitments, resuming operations on January 14. (80-01)

MANAGERIAL ITEMS

+ The shift technical advisor system is in place. Operations crews are now on a five shift schedule which allows one extra week on day-shift for training. (80-01)

PLANT STATUS

Currently operating at 208 Mwt. The plant was shutdown during the first two weeks of January to make required short term lessons learned changes of NUREG 0578.

+LAST IE SITE INSPECTION DATE: January 8-11, 1980

+ INSPECTION REPORT NO: 80-01

SUMMARY

INSPECTION SUMMARY

+ Inspection on January 8-11, (80-01): Routine, unannounced inspection of the licensee's onsite Quality Assurance Program changes; Procedure System; and followup actions relative to Licensee Event Reports, IE Bulletins, IE Circulars, and open inspection items. The inspection involved 50 inspector hours onsite by two NRC inspectors. No items of noncompliance were identified in the six areas inspected.

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 6.3.A.6 REQUIRES THAT DETAILED WRITTEN PROCEDURES FOR SURVEILLANCE AND TESTING BE PREPARED, APPROVED, AND ADHERED TO. SECTION 500 OF THE BFNP RADIOCHEMICAL LABORATORY MANUAL REQUIRES AN ANNUAL CHECK OF ACTIVITY AND EFFICIENCY FACTORS FOR THE GE(LI) GAMMA SPECTROSCOPY SYSTEMS. CONTRARY TO THE ABOVE, NO EFFICIENCY AND ACTIVITY CHECKS WERE MADE DURING THE PERIOD FROM FEBRUARY 1977 TO DECEMBER 1979.
(7944 DEFICIENCY)

INSPECTION STATUS

PLANT STATUS:

+ REFUELING UNTIL MARCH 15, 1980.

+ LAST IE SITE INSPECTION DATE: FEBRUARY 26-29, 1980

+ INSPECTION REPORT NO: 50-259/80-10

SUMMARY

INSPECTION SUMMARY

+ INSPECTION DECEMBER 17-20 (79-44): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 10 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONFIRMATORY MEASUREMENTS INCLUDING: REVIEW OF RADIOCHEMICAL INSTRUMENT CALIBRATION AND QUALITY CONTROL; REVIEW OF RADIOCHEMICAL PROCEDURES; AND COMPARISON OF RESULTS OF THE ANALYSES OF SPLIT SAMPLES ANALYZED BY THE LICENSEE AND THE NRC RII MOBILE LABORATORY. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE TO PERFORM ANNUAL EFFICIENCY AND ACTIVITY CHECKS FOR GE(LI) COUNTING SYSTEMS).

INSPECTION JANUARY 16-18 (80-01): THIS UNANNOUNCED INSPECTION INVOLVED 16 INSPECTOR-HOURS ON SITE IN THE AREAS OF ADMINISTRATIVE CONTROLS, THERMAL AND CHEMICAL DISCHARGES, CHEMICAL USAGE, LICENSEE EVENT REPORTS AND ENVIRONMENTAL SURVEILLANCE. OF THE FIVE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 21-24 (80-02): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 10 INSPECTOR-HOURS ON SITE IN THE AREAS OF OBSERVATION OF THE REFUELING ACTIVITIES OF UNIT 1 IN PREPARATION FOR CYCLE 4 AND REVIEW OF THE STARTUP TESTING ACTIVITIES CONDUCTED ON UNIT 3 AT THE START OF CYCLE 3. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 29-31 (80-03): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 4 INSPECTOR-HOURS ON SITE IN THE AREA OF REFUELING ACTIVITIES. OF THE ONE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 21 (80-04): MANAGEMENT MEETING TO DISCUSS THE IMPLEMENTATION OF REQUIREMENTS DIRECTED IN THE ORDER MODIFYING THE LICENSES OF THE BROWNS FERRY NUCLEAR PLANT, UNIT NOS. 1, 2 AND 3. THE MEETING INVOLVED 4 INSPECTOR-HOURS BY 6 NRC INSPECTORS. WITHIN THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 5-7 (80-07): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 4 INSPECTOR-HOURS ON SITE IN THE AREAS OF VIDEO (TV) OBSERVATION OF CORE SPRAY SYSTEM SPARGER (UNIT 1); REVIEW OF METHODS OF WELD FITUP INSPECTION (UNITS 1, 2 AND 3); AND REVIEW OF PROPOSED ACTIONS CONCERNING A LICENSEE EVENT REPORT (UNIT 1). OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

+ INSPECTION REPORT NO: 50-260/80-09

SUMMARY

INSPECTION SUMMARY

+ INSPECTION DECEMBER 17-20 (79-44): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 10 INSPECTOR-HOURS ON SITE IN THE AREAS OF CONFIRMATORY MEASUREMENTS INCLUDING: REVIEW OF RADIOCHEMICAL INSTRUMENT CALIBRATION AND QUALITY CONTROL; REVIEW OF RADIOCHEMICAL PROCEDURES; AND COMPARISON OF RESULTS OF THE ANALYSES OF SPLIT SAMPLES ANALYZED BY THE LICENSEE AND THE NRC RII MOBILE LABORATORY. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE TO PERFORM ANNUAL EFFICIENCY AND ACTIVITY CHECKS FOR GE(LI) COUNTING SYSTEMS).

INSPECTION JANUARY 16-18 (80-01): THIS UNANNOUNCED INSPECTION INVOLVED 16 INSPECTOR-HOURS ON SITE IN THE AREAS OF ADMINISTRATIVE CONTROLS, THERMAL AND CHEMICAL DISCHARGES, CHEMICAL USAGE, LICENSEE EVENT REPORTS AND ENVIRONMENTAL SURVEILLANCE. OF THE FIVE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 21-24 (80-02): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 11 INSPECTOR-HOURS ON SITE IN THE AREAS OF OBSERVATION OF THE REFUELING ACTIVITIES OF UNIT 1 IN PREPARATION FOR CYCLE 4 AND REVIEW OF THE STARTUP TESTING ACTIVITIES CONDUCTED ON UNIT 3 AT THE START OF CYCLE 3. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 29-31 (80-03): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 4 INSPECTOR-HOURS ON SITE IN THE AREA OF REFUELING ACTIVITIES. OF THE ONE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 21 (80-04): MANAGEMENT MEETING TO DISCUSS THE IMPLEMENTATION OF REQUIREMENTS DIRECTED IN THE ORDER MODIFYING THE LICENSES OF THE BROWNS FERRY NUCLEAR PLANT, UNIT NOS. 1, 2 AND 3. THE MEETING INVOLVED 4 INSPECTOR-HOURS BY 6 NRC INSPECTORS. WITHIN THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 5-7 (80-07): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 5 INSPECTOR-HOURS ON SITE IN THE AREAS OF VIDEO (TV) OBSERVATION OF CORE SPRAY SYSTEM SPARGER (UNIT 1); REVIEW OF METHODS OF WELD FITUP INSPECTION (UNITS 1, 2 AND 3); AND REVIEW OF PROPOSED ACTIONS CONCERNING A LICENSEE EVENT REPORT (UNIT 1). OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 6.3.A.6 REQUIRES THAT DETAILED WRITTEN PROCEDURES FOR SURVEILLANCE AND TESTING BE PREPARED, APPROVED, AND ADHERED TO. SECTION 500 OF THE BFNP RADIOCHEMICAL LABORATORY MANUAL REQUIRES AN ANNUAL CHECK OF ACTIVITY AND EFFICIENCY FACTORS FOR THE GE(LI) GAMMA SPECTROSCOPY SYSTEMS. CONTRARY TO THE ABOVE, NO EFFICIENCY AND ACTIVITY CHECKS WERE MADE DURING THE PERIOD FROM FEBRUARY 1977 TO DECEMBER 1979.
(7944 DEFICIENCY)

CONTRARY TO TS 6.3.A.1 AND CRITERION V OF APPENDIX B TO 10 CFR 50, AS IMPLEMENTED BY THE ACCEPTED QUALITY ASSURANCE PROGRAM, WRITTEN PROCEDURES WERE NOT PREPARED COVERING REMOVAL AND INSTALLATION OF PRIMARY CONTAINMENT HATCHES. THIS RESULTED IN AN IMPROPERLY SECURED EQUIPMENT HATCH WHICH PREVENTED MAINTAINING PRIMARY CONTAINMENT INTEGRITY ON DECEMBER 6-9, 1979.
(7945 VIOLATION)

CONTRARY TO 10 CFR 50.36(C)(2) THE REACTOR WAS NOT SHUTDOWN WHEN LOSS OF NITROGEN PRESSURE IN THE DRYWELL BETWEEN 12:30 P.M. AND 2:30 P.M. ON DECEMBER 8, 1979, INDICATED THAT PRIMARY CONTAINMENT INTEGRITY WAS NOT BEING MAINTAINED. THE CAUSE OF LEAKAGE WAS NOT KNOWN AT THAT TIME AND CONTAINMENT INTEGRITY WAS NOT RESTORED UNTIL ABOUT 8:30 A.M. ON DECEMBER 9, 1979. REACTOR OPERATION WAS CONTINUED THROUGHOUT THIS TIME.
(7945 VIOLATION)

CONTRARY TO TECHNICAL SPECIFICATION 6.7.2.A, VERBAL NOTIFICATION TO THE NRC OF AN EVENT IN WHICH ABNORMAL DEGRADATION WAS DISCOVERED IN THE PRIMARY CONTAINMENT WAS NOT MADE UNTIL APPROXIMATELY 41 HOURS AFTER INDICATIONS WERE AVAILABLE THAT THE PRIMARY CONTAINMENT WAS LEAKING IN EXCESS OF TECHNICAL SPECIFICATION LIMITS. THE CONFIRMATION FACSIMILE TRANSMISSION WAS NOT MADE UNTIL THE SECOND WORKING DAY FOLLOWING THE EVENT.
(7945 INFRACTION)

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 20.203(F), WHICH REQUIRES THAT EACH CONTAINER OF LICENSED MATERIAL CONTAINING QUANTITIES GREATER THAN THOSE LISTED IN APPENDIX C OF 10 CFR 20 SHALL BEAR A DURABLE CLEARLY VISIBLE LABEL IDENTIFYING THE RADIOACTIVE CONTENTS AND SHALL BEAR THE RADIATION CAUTION SYMBOL AND THE WORDS "CAUTION, RADIOACTIVE MATERIAL" OR "DANGER RADIOACTIVE MATERIAL," ON JANUARY 24, 1980, THE LICENSEE HAD NOT LABELED WITH THE APPROPRIATE WARNING AND INFORMATION SEVERAL CONTAINERS OF RADIOACTIVE MATERIAL STORED IN THE GENERAL AREA BETWEEN THE PLANT AND THE DIESEL GENERATOR BUILDING. RADIATION LEVELS MEASURED BY THE INSPECTOR INDICATED THAT THE CONTAINERS CONTAINED QUANTITIES OF RADIOACTIVE MATERIAL IN EXCESS OF THE QUANTITIES SPECIFIED IN 10 CFR 20 APPENDIX C BELOW WHICH LABELING IS NOT REQUIRED. THE EXCEPTIONS TO LABELING REQUIREMENTS SPECIFIED BY 10 CFR 20.203(F)(3) DID NOT APPLY. (8003 INFRACTION)

CONTRARY TO 10 CFR 20.201(B) WHICH REQUIRES THAT EACH LICENSEE MAKE OR CAUSE TO BE MADE SUCH SURVEYS AS MAY BE NECESSARY TO COMPLY WITH THE REGULATIONS IN 10 CFR 20, ON JANUARY 25, 1980, THE LICENSEE HAD NOT PERFORMED THE SURVEYS NECESSARY TO PREVENT LOSS OF CONTROL OVER TWO CONTAMINATED FIRE HOSES FOUND NEAR THE BASE OF THE PLANT STACK. THESE FIRE HOSES WERE NOT IN ANY TYPE OF CONTAINER AND CARRIED NO LABELS YET DOSE RATES OF UP TO 40 MR/HR WERE MEASURED AT CONTACT WITH THE HOSES. (8003 INFRACTION)

SUMMARY

INSPECTION SUMMARY

+ INSPECTION JANUARY 22-23 (80-02): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 13 INSPECTOR-HOURS AT UNITED ENGINEERS AND CONSTRUCTORS OFFICES IN THE AREAS OF SEISMIC ANALYSIS FOR AS-BUILT SAFETY RELATED PIPING SYSTEMS (IE BULLETIN 79-14) AND OF CONCRETE EXPANSION ANCHOR INSTALLATION (IE BULLETIN 79-02). OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 23-25 (80-03): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED 11 INSPECTOR-HOURS ON SITE IN THE AREAS OF PACKAGING LOW-LEVEL RADIOACTIVE WASTE FOR TRANSPORT AND BURIAL (IE BULLETIN NO. 79-19) AND ONSITE RADIOACTIVE WASTE STORAGE. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; TWO APPARENT ITEMS OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO LABEL CONTAINERS OF RADIOACTIVE MATERIAL; AND INFRACTION - FAILURE TO SURVEY).

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 20.203(F), WHICH REQUIRES THAT EACH CONTAINER OF LICENSED MATERIAL CONTAINING QUANTITIES GREATER THAN THOSE LISTED IN APPENDIX C OF 10 CFR 20 SHALL BEAR A DURABLE CLEARLY VISIBLE LABEL IDENTIFYING THE RADIOACTIVE CONTENTS AND SHALL BEAR THE RADIATION CAUTION SYMBOL AND THE WORDS "CAUTION, RADIOACTIVE MATERIAL" OR "DANGER RADIOACTIVE MATERIAL." ON JANUARY 24, 1980, THE LICENSEE HAD NOT LABELED WITH THE APPROPRIATE WARNING AND INFORMATION SEVERAL CONTAINERS OF RADIOACTIVE MATERIAL STORED IN THE GENERAL AREA BETWEEN THE PLANT AND THE DIESEL GENERATOR BUILDING. RADIATION LEVELS MEASURED BY THE INSPECTOR INDICATED THAT THE CONTAINERS CONTAINED QUANTITIES OF RADIOACTIVE MATERIAL IN EXCESS OF THE QUANTITIES SPECIFIED IN 10 CFR 20 APPENDIX C BELOW WHICH LABELING IS NOT REQUIRED. THE EXCEPTIONS TO LABELING REQUIREMENTS SPECIFIED BY 10 CFR 20.203(F)(3) DID NOT APPLY. (8003 INFRACTION)

CONTRARY TO 10 CFR 20.201(B) WHICH REQUIRES THAT EACH LICENSEE MAKE OR CAUSE TO BE MADE SUCH SURVEYS AS MAY BE NECESSARY TO COMPLY WITH THE REGULATIONS IN 10 CFR 20. ON JANUARY 25, 1980, THE LICENSEE HAD NOT PERFORMED THE SURVEYS NECESSARY TO PREVENT LOSS OF CONTROL OVER TWO CONTAMINATED FIRE HOSES FOUND NEAR THE BASE OF THE PLANT STACK. THESE FIRE HOSES WERE NOT IN ANY TYPE OF CONTAINER AND CARRIED NO LABELS YET DOSE RATES OF UP TO 40 MR/HR WERE MEASURED AT CONTACT WITH THE HOSES. (8003 INFRACTION)

PLANT STATUS:

* UNIT SHUTDOWN FEBRUARY 29, 1980 FOR REFUELING AND TORUS MODIFICATION.

* LAST IE SITE INSPECTION DATE: JANUARY 23-25, 1980

* INSPECTION REPORT NO: 50-324/80-03

SUMMARY

INSPECTION SUMMARY

* INSPECTION JANUARY 22-23 (80-02): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 13 INSPECTOR-HOURS AT UNITED ENGINEERS AND CONSTRUCTORS OFFICES IN THE AREAS OF SEISMIC ANALYSIS FOR AS-BUILT SAFETY RELATED PIPING SYSTEMS (IE BULLETIN 79-14) AND OF CONCRETE EXPANSION ANCHOR INSTALLATION (IE BULLETIN 79-02). OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 23-25 (80-03): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED 11 INSPECTOR-HOURS ON SITE IN THE AREAS OF PACKAGING LOW-LEVEL RADIOACTIVE WASTE FOR TRANSPORT AND BURIAL (IE BULLETIN NO. 79-19) AND ONSITE RADIOACTIVE WASTE STORAGE. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA; TWO APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN ONE AREA (INFRACTION - FAILURE TO LABEL CONTAINERS OF RADIOACTIVE MATERIAL; AND INFRACTION - FAILURE TO SURVEY).

INSPECTION STATUS

ENFORCEMENT STATUS

SECTION 2.2.1 OF APPENDIX B, ENVIRONMENTAL TECHNICAL SPECIFICATIONS, REQUIRES IN PART, THAT THE DEMINERALIZER REGENERATION PRODUCED WASTE SOLUTION SHALL BE NEUTRALIZED, IF NECESSARY, TO OBTAIN A PH IN THE RANGE OF 6.0-9.0 PRIOR TO RELEASE INTO THE CIRCULATING WATER DISCHARGE. CONTRARY TO THE ABOVE, ON NOVEMBER 29, 1979, DEMINERALIZER REGENERATION PRODUCED WASTE SOLUTION WITH A PH OF 12.1, WAS NOT NEUTRALIZED TO OBTAIN A PH IN THE RANGE OF 6.0 TO 9.0 PRIOR TO RELEASE, AND WAS RELEASED TO THE YARD DRAIN INSTEAD OF TO THE CIRCULATING WATER DISCHARGE, AS SPECIFIED.
(7924 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS:

+ No significant information to report.

+ LAST IE SITE INSPECTION DATE: 3/12/80

+ INSPECTION REPORT NO: 50-317/80-03

SUMMARY

INSPECTION SUMMARY

+ 50-317/79-24 - Dec 10-11: Special, announced inspection of the make-up and condensate demineralizer system operations and associated nonradiological discharges. The inspection involved 14 hours onsite by two regionally based NRC inspectors. Subsequent to the inspection an enforcement meeting was held on November 29, 1979 at the NRC Region I office. Noncompliances: One (exceeding the plant discharge limiting condition for operation for pH).

INSPECTION STATUS

ENFORCEMENT STATUS

SECTION 2.2.1 OF APPENDIX B, ENVIRONMENTAL TECHNICAL SPECIFICATIONS, REQUIRES IN PART, THAT THE DEMINERALIZER REGENERATION PRODUCED WASTE SOLUTION SHALL BE NEUTRALIZED, IF NECESSARY, TO OBTAIN A PH IN THE RANGE OF 6.0-9.0 PRIOR 1) RELEASE INTO THE CIRCULATING WATER DISCHARGE. CONTRARY TO THE ABOVE, ON NOVEMBER 29, 1979, DEMINERALIZER REGENERATION PRODUCED WASTE SOLUTION WITH A PH OF 12.1, WAS NOT NEUTRALIZED TO OBTAIN A PH IN THE RANGE OF 6.0 TO 9.0 PRIOR TO RELEASE, AND WAS RELEASED TO THE YARD DRAIN INSTEAD OF TO THE CIRCULATING WATER DISCHARGE, AS SPECIFIED.

+ INSPECTION REPORT NO: 50-318/80-03

SUMMARY

INSPECTION SUMMARY

+ 50-318/79-23 - Dec 10-11: Special, announced inspection of the make-up and condensate demineralizer system operations and associated nonradiological discharges. The inspection involved 14 hours onsite by two regionally based NRC inspectors. Subsequent to the inspection an enforcement meeting was held on November 29, 1979 at the NRC Region I office. Noncompliances: One (exceeding the plant discharge limiting condition for operation for pH).

SUMMARY

INSPECTION SUMMARY

+ Inspection on December 1, 1979 through January 11, 1980 (80-02): Review of plant operations, security, Licensee Event Reports (LER's), surveillance, IE Bulletins, records, independent inspection, and License Conditions. The inspection involved 184 inspector hours onsite by the Senior Resident Inspector. Of the eight areas inspected, no items of noncompliance were identified in seven. In the independent inspection effort, one item of noncompliance was identified as follows: Control of Standing Orders.

+ Investigation on December 17, 1979 and January 9-10, 1980 (80-03): Special unannounced investigation into allegations concerning improper welding techniques and security procedures at the D. C. Cook, Unit 1, containment area; interviews of licensee and contractor personnel. The investigation involved 30 investigative-hours onsite by three NRC personnel. No items of noncompliance with NRC requirements were identified during the course of this investigation.

158	02/16/80	F	.0	B	5		CH	ZZZZZZ	REACTOR POWER REDUCED TO 62% TO PERMIT REMOVAL OF THE WEST MAIN FEED PUMP TURBINE FROM SERVICE TO INVESTIGATE CAUSE FOR OSCILLATION IN PUMP AND TURBINE VIBRATION. REACTOR POWER RETURNED TO 100% 02/18/80.

SUMMARY

OPERATION WAS AT NEAR FULL POWER DURING THE REPORT PERIOD. ON 02/16/80, LOAD WAS REDUCED FOR REMOVAL OF THE WEST MAIN FEED PUMP FROM SERVICE TO INVESTIGATE MINOR VIBRATION AND OSCILLATION. A BALANCE WEIGHT PLACED ON THE PUMP DID NOT HELP THE OSCILLATION; HOWEVER, THIS VIBRATION PATTERN CEASED BY 02/29/80. OTHER BRIEF REDUCTIONS WERE NECESSARY FOR TURBINE VALVE TESTING AND MINOR MAINTENANCE.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TECHNICAL SPECIFICATION 4.3.3.2B THE INCORE DETECTOR CALIBRATION WAS NOT CONDUCTED WITHIN THE ALLOWABLE TIME FRAME. (8003 INFRACTION)

AS REQUIRED BY 10CFR50, APPENDIX B, CRITERION V, "ACTIVITIES AFFECTING QUALITY SHALL BE PRESCRIBED BY...PROCEDURES...AND SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THESE ..PROCEDURES...". THE LICENSEE'S QOP-9.0 REQUIRES PIPES TO HAVE ENDS COVERED AND STAINLESS NOT IN CONTACT WITH CARBON STEEL. ON 1-29-80 IT WAS NOTED THAT PIPE ENDS WERE NOT COVERED AND STAINLESS STEEL PIPE WAS STORED ON A CARBON RACK. (8007 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

+ LOSS OF POWER TO NNI UNDER INVESTIGATION.

FACILITY ITEMS (PLANS AND PROCEDURES):

NONE.

MANAGERIAL ITEMS:

+ UNIT SHUT DOWN PENDING REVIEW OF TRANSIENT.

PLANT STATUS:

+ RECOVERING FROM FEBRUARY 26 EVENT CAUSED BY LOSS OF POWER TO NNI.

+ LAST IE SITE INSPECTION DATE: FEBRUARY 25 - MARCH 4 1980

+ INSPECTION REPORT NO: 50-302/80-11

SUMMARY

INSPECTION SUMMARY

+ INSPECTION JANUARY 16-18 AND 24-25 (80-02): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 24 INSPECTOR-HOURS ON SITE AND GILBERT ASSOCIATES, INC., OFFICES IN THE AREAS OF SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS (IE BULLETIN 79-14) AND OF CONCRETE EXPANSION ANCHOR INSTALLATION (IE BULLETIN 79-02). OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 5-8 (80-05): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 21 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS AND REVIEW OF PREVIOUSLY IDENTIFIED INSPECTOR ITEMS. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 14-17 (80-03): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 14 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, REVIEW OF PREVIOUSLY IDENTIFIED INSPECTOR ITEMS, DISCUSSION OF PART 21 REPORTS, AND REVIEW OF SURVEILLANCE PROCEDURES. OF THE FOUR AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN THREE AREAS. ONE APPARENT ITEM OF NONCOMPLIANCE WAS IDENTIFIED IN ONE AREA (INFRACTION - FAILURE TO CONDUCT SURVEILLANCE AS REQUIRED BY TECHNICAL SPECIFICATIONS).

INSPECTION JANUARY 21-25 (80-04): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 30 INSPECTOR-HOURS ON SITE IN THE AREA OF PLANT OPERATIONS. OF THE ONE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 28 - FEBRUARY 1 (80-07): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 30 INSPECTOR-HOURS ON SITE IN THE AREAS OF OPERATIONS, PLANT TOUR, AND FOLLOWUP OF PREVIOUSLY IDENTIFIED ITEMS. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO FOLLOW PROCEDURES).

OTHER ITEMS OF INTEREST

PLANT STATUS

- Routine operation.

- LAST IE SITE INSPECTION DATE: November 21; December 12-14, 1979 and January 25, 1980

- INSPECTION REPORT NO: 79-33

SUMMARY

INSPECTION SUMMARY

- Inspection On December 3-7, 11-13 and 19-20, (79-30): Announced special inspection of the licensee's implementation of the Quality Assurance Program in the following areas: QA/QC administration; qualification of personnel; design changes and modifications; records control; receipt, storage and handling; tests and experiments; procurement control; document control; offsite review committee; audits; test and measurement equipment; survaillance and calibration; maintenance; housekeeping and cleanliness; and offsite support staff. The inspection involved 222 inspector hours onsite by three NRC inspectors. Of the 15 areas inspected, no apparent items of noncompliance or deviations were identified in 12 areas, three apparent items of noncompliance were identified in three areas (failure to comply with record control requirements; failure to maintain control of drawings; and failure to conduct required reviews).

- Inspection on December 3-7, 10-14, 17-21, 26-28 and 31, (79-31): A routine, unannounced inspection of plant operations, physical protection (security organization, physical barriers, access control, communications), followup of licensee event reports, the modification of the hot leg RTD's, nuclear instrumentation calibration procedures and HPI line restraint work. The inspection involved 175 inspector hours onsite by the Resident Inspector. No items of noncompliance or deviations were identified.

- Inspection on November 21; December 12-14, 1979 and January 25, 1980, (79-33): Inspection of RTD connection repair at Hot Leg risers; licensee implementation of IEB 79-02 and IEB 79-14; and snubber installations. The inspection involved 26 inspector hours onsite, at the licensee corporate office, and at the NRC office by one NRC inspector. No items of noncompliance or deviations were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

UNIT 1 TECHNICAL SPECIFICATIONS, SECTION 6.2.B REQUIRES THAT RADIATION CONTROL PROCEDURES BE MAINTAINED, MADE AVAILABLE TO ALL STATION PERSONNEL, AND ADHERED TO. RADIATION CONTROL STANDARDS PROCEDURE 37-1-E-3, "WORK IN CONTROLLED AREAS (RADIATION AREAS AND HIGH RADIATION AREAS)," REQUIRES THAT PERSONNEL NOT EAT, DRINK, SMOKE, OR CHEW IN THOSE CONTROLLED AREAS. CONTRARY TO THE ABOVE, ON DECEMBER 20, 1979, WHILE MAKING A ROUTINE TOUR OF THE UNIT 1 TURBINE BUILDING (A POSTED RADIATION AREA), THE NRC INSPECTOR OBSERVED EVIDENCE OF EATING, DRINKING, SMOKING, AND CHEWING (I.E., THE PRESENCE OF NUMEROUS CIGARETTE BUTTS, EMPTY SOFT DRINK CANS, EMPTY CANDY WRAPPERS, AND EMPTY CHEWING GUM WRAPPERS) IN THIS RADIATION AREA. THIS IS A REPETITIVE ITEM OF NONCOMPLIANCE SINCE THE SAME PROBLEM WAS IDENTIFIED PREVIOUSLY IN NRC INSPECTION REPORT NO. 50-010/79-19, DATED OCTOBER 18, 1979. (7925 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

FACILITY ITEMS

+ Radwaste shipments to Barnwell, South Carolina were resumed on November 28, 1979 following rescission of a shipping ban imposed by the State of South Carolina. (79-23)

MANAGERIAL ITEMS

+ The licensee has committed to review/revise the procedures and training program for processing, packaging, transfer, and transport of radioactive material by early 1980. (79-23)

PLANT STATUS

Unit 1 shutdown on October 31, 1978 for an extended outage to upgrade ECCS, chemical cleaning and refueling. Outage expected to last a minimum of 18 months.

+LAST IE SITE INSPECTION DATE: January 10, 1980

+ INSPECTION REPORT NO: 80-02

SUMMARY

INSPECTION SUMMARY

+ Inspection on October 9 and November 28, (79-23): Nonroutine, announced inspection of licensee actions taken in response to IE Bulletin 79-19, "Packaging of Low Level Radioactive Waste for Transport and Burial" and, as agreed with the State of South Carolina, verification that identified packaging discrepancies were corrected before resumption of radwaste shipments to Barnwell, South Carolina. The inspection involved 14 inspector hours onsite by one NRC inspector. Of the 10 areas inspected, no items of noncompliance or deviations were found in nine areas. One apparent item of noncompliance was found in the remaining area (failure to follow procedures).

+ Inspection on December 3, 1979 through January 4, 1980, (79-25): Routine, unannounced resident inspection of maintenance activities; plant operations; physical protection-security organization, physical barriers, access control (identification, authorization, badging, search, and escorting), and communications; licensee event reports; surveillance of safety related systems/components required by technical specifications; calibration of safety related components required by technical specifications; radioactive waste system-operations; surveillance of core power distribution limits; thermal power evaluation; radiation protection-operations; calibration of LPRM system; APRM calibration; calibration of safety related components not required by technical specifications; critical fire protection area inspection; and, design, design changes, and modifications. The inspection involved 122 inspector hours onsite by two NRC inspectors. Of the 18 areas inspected, there were no items of noncompliance identified in 17 areas. There was one item of noncompliance (failure to follow procedures) identified in one area.

+ Inspection on January 8-9, (80-01): Routine, announced inspection of Units 2 and 3 Emergency Diesel Generator modifications; modification of electrical equipment for Unit 1 relative to compliance to IEEE-279; and, followup of previously identified unresolved items. The inspection involved 14 inspector hours onsite by one NRC inspector. No items of noncompliance were identified.

+ Inspection on January 10, (80-02): A special announced meeting was conducted to discuss recent personnel errors at Dresden Nuclear Power Station; and, Cooling Lake leakage at Dresden Nuclear Power Station. The meeting involved 12 inspector hours at the corporate office by six NRC personnel.

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENTS

- A new cement radwaste solidification systems has replaced an outdated solidification system. (79-27)
- Modifications to the emergency diesel generators have been completed. The modifications involved: (1) alarm for manual air shutoff valve placed in the closed positions; (2) alarm for bus tie breaker between the diesel generator and its emergency bus placed in the test position; (3) circuit revisions to allow multiple diesel air start attempts; and (4) alarm for incorrect droop setting. (80-01)

FACILITY ITEMS

- Radwaste shipments to Barnwell, South Carolina were resumed on November 28, 1979 following rescission of a shipping ban imposed by the State of South Carolina. (79-27)

MANAGERIAL ITEMS

- The licensee has committed to review/revise the procedures and training program for processing, packaging, transfer, and transport of radioactive material by early 1980. (79-27)

PLANT STATUS

Unit operating routinely.

*LAST IE SITE INSPECTION DATE: January 10, 1980

- INSPECTION REPORT NO: 80-02

SUMMARY

INSPECTION SUMMARY

- Inspection on October 9 and November 28, (79-27): Nonroutine, announced inspection of licensee actions taken in response to IE Bulletin 79-19, "Packaging of Low Level Radioactive Waste for Transport and Burial" and, as agreed with the State of South Carolina, verification that identified packaging discrepancies were corrected before resumption of radwaste shipments to Barnwell, South Carolina. The inspection involved 14 inspector hours onsite by one NRC inspector. Of the 10 areas inspected, no items of noncompliance or deviations were found in nine areas. One apparent item of noncompliance was found in the remaining area (failure to follow procedures).
- Inspection on December 3, 1979 through January 4, 1980, (79-29): Routine, unannounced resident inspection of maintenance activities; plant operations; physical protection-security organization, physical barriers, access control (identification, authorization, badging, search, and escorting), and communications; licensee event reports; surveillance of safety related systems/components required by technical specifications; calibration of safety related components required by technical specifications; radioactive waste system-operations; surveillance of core power distribution limits; thermal power evaluation; radiation protection-operations; calibration of LPRM system; APRM calibration; calibration of safety related components not required by technical specifications; critical fire protection area inspection; and, design, design changes, and modifications. The inspection involved 122 inspector hours onsite by two NRC inspectors. Of the 18 areas inspected, there were no items of noncompliance identified.
- Inspection on January 8-9, (80-01): Routine, announced inspection of Units 2 and 3 Emergency Diesel Generator modifications; modification of electrical equipment for Unit 1 relative to compliance to IEEE-279; and, followup of previously identified unresolved items. The inspection involved 14 inspector hours onsite by one NRC inspector. No items of noncompliance were identified.
- Inspection on January 10, (80-02): A special announced meeting was conducted to discuss recent personnel errors at Dresden Nuclear Power Station; and, Cooling Lake leakage at Dresden Nuclear Power Station. The meeting involved 12 inspector hours at the corporate office by six NRC personnel.

+LAST IE SITE INSPECTION DATE: October 9-12, 18-19, 25-26; November 1-2 and 20, 1979

+ INSPECTION REPORT NO: 79-25

SUMMARY

INSPECTION SUMMARY

+ Inspection on October 9-12, 18-19, 25-26; November 1-2 and 20, (79-25): Announced special inspection of the licensee's implementation of the Quality Assurance Program in the following areas: QA/QC administration; qualification of personnel; design changes and modifications; records control; receipt, storage and handling; tests and experiments; procurement control; document control; offsite review committee; audits; test and measurement equipment; surveillance and calibration; maintenance; housekeeping and cleanliness; and offsite support staff. The inspection involved 238 inspector hours onsite by five NRC inspectors. Of the 15 areas inspected, no apparent items of noncompliance or deviations were identified in nine areas, seven apparent items of noncompliance were identified in six areas (failure to provide basis for a special test procedure; failure to review and approve a procedure; failure to issue an official Safety-Related List; failure to utilize status reports; failure to adequately address Technical Specification requirement 4.6; failure to follow procedures relating to maintenance; and failure to update drawings).

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.1, WRITTEN PROCEDURES SHALL BE ESTABLISHED, IMPLEMENTED AND MAINTAINED. PLANT PROCEDURE FNP-1-AP-52, EQUIPMENT STATUS CONTROL AND MAINTENANCE AUTHORIZATIONS STATES THAT THE RELEASING INDIVIDUAL WILL REVIEW ITEMS 12-20 ON THE WORK REQUEST AND WILL SIGN THE "RELEASE FOR WORK" SECTION ONLY IF THE REQUEST IS COMPLETE AND ACCURATE. CONTRARY TO THE ABOVE, FNP WORK REQUEST 19749, WHICH CALLED FOR THE REPAIR OF WASTE GAS TANK NO. 8 INLET ISOLATION VALVE (Q1G-22V0858) IN ACCORDANCE WITH PLANT PROCEDURE FNP-0-MP-21.1 WAS RELEASED FOR WORK ALTHOUGH THE PLANT CONDITIONS NECESSARY TO PERFORM THE WORK WERE NOT IN AFFECT. THE TAGGING OPERATION ORDER NO 79-1671 REFERENCED ON THE WORK REQUEST DID NOT ESTABLISH PLANT CONDITIONS NECESSARY TO PERFORM THE WORK SPECIFIED ON THE WORK REQUEST.
(7942 INFRACTION)

- INSPECTION REPORT NO: 50-348/80-07

SUMMARY

INSPECTION SUMMARY

- INSPECTION DECEMBER 10-14 (79-42): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 35 INSPECTOR-HOURS ON SITE IN THE AREAS OF THE RADIOACTIVE WASTE MANAGEMENT PROGRAM, INCLUDING RADIOACTIVE EFFLUENT RELEASE REPORTS, RADIOACTIVE EFFLUENT RELEASE RECORDS, PROCEDURES FOR CONTROLLING THE RELEASE OF EFFLUENTS; REVIEW OF LICENSEE ACTION ON IE BULLETINS AND CIRCULARS AND FOLLOWUP ON AN UNPLANNED GASEOUS RELEASE. OF THE SIX AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FIVE AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO FOLLOW PROCEDURES FOR REVIEWING MAINTENANCE WORK REQUEST).

INSPECTION JANUARY 30-31 (80-01): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 14 INSPECTOR-HOURS ON SITE IN THE AREAS AND ACTIVITIES RELATIVE TO IE BULLETIN 79-17 (PIPE CRACKS IN STAGNANT BORATED WATER SYSTEMS AT PWR PLANTS). NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-065/ 03L-0	11/22/79	01/11/80	30 DAY LER	MAIN STEAM ISO VALVE 3370C WAS INOPERABLE VIA HAND SWITCH; ALL 5 OTHERS OPERABLE. HAND SWITCH REPLACED AND CHECKED OUT SATISFACTORY. VALVE WOULD CLOSE ON AUTO ISOLATION.
79-067/ 03L-0	12/22/79	01/25/80	30 DAY LER	RIVER WATER B TRAIN PUMPS INOPERABLE DUE TO A FAULTY LEVEL.
79-068/ 03L-0	12/26/79	01/25/80	30 DAY LER	PERSONNEL ERROR RESULTED IN NO CHARGING PUMP ALIGNED TO "B".

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
011	01/31/80	S	368.1	D	4		ZZ	ZZZZZZ	CONTINUATION OF 01/31/80 SHUTDOWN TO PERFORM NUREG 0578 RELATED DESIGN CHANGES.
012	02/16/80	F	3.8	A	3		HH	INSTRU	UNSTABLE UNIT TRIPPED ON LO-LO STEAM GENERATOR LEVEL CAUSED BY FEED PUMP CONTROL. I & C REPLACED A DEFECTIVE CONTROL CARD IN 'B' SGFP CONTROL SYSTEM.
013	02/16/80	F	17.7	G	3		HH	ZZZZZZ	UNIT TRIPPED WHILE IN MODE 2 ON STEAM GENERATOR LO-LO LEVEL. THE REACTOR OPERATOR DID NOT MAINTAIN LEVEL WITH AUXILIARY FEEDWATER FLOW. REACTOR OPERATOR WAS REINSTRUCTED.
014	02/17/80	F	16.0	A	3		HH	INSTRU	UNIT TRIPPED ON LO-LO STEAM GENERATOR LEVEL CAUSED BY UNSTABLE FEEDPUMP CONTROL. I & C CORRECTED THE PROBLEM BY REVISING THE DELTA P PROGRAM IN THE FEEDPUMP SPEED CONTROL CIRCUIT.
015	02/18/80	F	7.8	B	5		HH	HTEXCH	UNIT WAS REDUCED AND HELD AT 50% REACTOR POWER TO REPAIR A LEAK ON THE SHELL SIDE OF 5B HEATER AND CHANGE OIL IN THE FEEDPUMP OIL CONDITIONERS WHICH CONTAINED WATER.
016	02/20/80	F	28.5	B	5		EB	INSTRU	UNIT WAS REDUCED AND HELD AT 86% REACTOR POWER TO INVESTIGATE MAIN GENERATOR EXCITER VOLTAGE REGULATOR OSCILLATIONS.
017	02/21/80	S	2.1	B	5		HA	VALVEX	UNIT WAS HELD AT 86% REACTOR POWER TO PERFORM MAIN TURBINE GOVERNOR CONTROL VALVE SURVEILLANCE TESTING.
018	02/22/80	F	14.6	H	3		HH	ZZZZZZ	UNIT TRIPPED DUE TO TRIP OF BOTH SGFP'S ON LOW SUCTION PRESSURE.
019	02/23/80	F	8.5	G	1		HH	ZZZZZZ	UNIT MANUALLY TRIPPED DUE TO TRIP OF BOTH SGFP'S ON LOW SUCTION PRESSURE.
020	02/23/80	F	16.1	B	5		HH	VALVEX	UNIT HELD AT 90% REACTOR POWER TO INVESTIGATE LOW SGFP SUCTION PRESSURE. ADJUSTED GLAND SEAL CONDENSER BYPASS VALVE AND A HEATER DRAIN TANK DUMP VALVE.

SUMMARY

THE UNIT REMAINED SHUTDOWN UNTIL 02/16/80 TO MAKE TMI-RELATED MODIFICATIONS. THREE UNIT TRIPS OCCURRED BETWEEN 02/16/80 AND 02/17/80 ON LO-LO STEAM GENERATOR LEVEL DURING STARTUP. UNIT TRIPS ALSO OCCURRED ON 02/22/80 AND 02/23/80 DUE TO TRIPS OF BOTH STEAM GENERATOR FEED PUMPS ON LOW SUCTION PRESSURE. THREE LOAD REDUCTIONS WERE NECESSARY FOR MAINTENANCE.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50 APPENDIX B CRITERION II STATES THE APPLICANT SHALL ESTABLISH A QUALITY ASSURANCE PROGRAM...THE PROGRAM SHALL PROVIDE FOR INDOCTRINATION AND TRAINING OF PERSONNEL...." THE LICENSEE'S QUALITY ASSURANCE PROGRAM STATES IN SECTION II SUBSECTION 2.8 "TRAINING AT THE PLANT SHALL BE PROVIDED FOR PERSONNEL...A TRAINING PROCEDURE SHALL BE ESTABLISHED WHICH INCLUDES PROVISIONS TO IMPLEMENT AN ADEQUATE TRAINING PROGRAM...." THE LICENSEE'S "INDOCTRINATION AND TRAINING PROCEDURE NO. 3 - GENERAL EMPLOYEE TRAINING REQUIRES IN SECTION 3.5.6 THAT "PLANT PERSONNEL QUALIFIED IN RADIATION PROTECTION SHALL BE PROVIDED WITH ANNUAL RETRAINING." CONTRARY TO THE ABOVE TWO INDIVIDUALS EXCEEDED THE ANNUAL RETRAINING INTERVAL BY SIX AND TEN MONTHS RESPECTIVELY AS OF DECEMBER 1979.
(7918 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

+ An approximate 6 inch pipe crack has developed on the suction line to condensate booster pump B. A temporary fix has been made. The offgas system recombiner is out of service which has resulted in higher than normal stack releases.

FACILITY ITEMS (PLANS AND PROCEDURES):

Refueling outage scheduled for April. 1980.

MANAGERIAL ITEMS:

+ Effective April 1, 1980 the positions of Resident Manager and Superintendent of Power will be assumed by new personnel.

PLANT STATUS:

+ The plant is operating at near full power with an average offgas rate at the SJAE of 11,000 microcuries per second and an average stack release rate of 1750 microcuries per second.

+ LAST IE SITE INSPECTION DATE: 3/14/80

+ INSPECTION REPORT NO: 50-333/80-03

SUMMARY

INSPECTION SUMMARY

+ 50-333/80-01 - Feb 4-8: Routine, unannounced inspection of plant operations, Licensee Event Reports (LERs), IE Bulletin responses, licensee action on IE Circulars, and licensee action on previous inspection findings. This report also documents in-office review of LERs and the 1977 10 CFR 50.59 Report. The inspection involved 48-hours onsite by one region based inspector. Two items of noncompliance were identified (failure to comply with Technical Specifications prior to making a control rod inoperable; uncontrolled release of liquid with pH outside of Technical Specification required range).

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-096/ 03L	10/28/79	11/27/79	30 Day LER	Reactor water chloride and conductivity increased due to tube leak on waste concentrator. Conductivity exceeded TS limit
79-097/ 03L	10/30/79	11/27/79	30 Day LER	EDG C could not force parallel during testing. Event initiated reactor shutdown due to other system out of service
79-098/ 03L	10/31/79	11/28/79	30 Day LER	Failure of radwaste building exhaust monitor B detected during surveillance testing
79-099/ 03L	11/05/79	12/04/79	30 Day LER	Hydraulic control unit for CR 18-35 was made inoperable to repair leaking access plug
79-100/ 03L	11/08/79	12/04/79	30 Day LER	HPCI was made inoperable to repair leaking gasket on hydraulic control valve seat drain
79-101/ 03L	11/08/79	12/04/79	30 Day LER	Six penetrations were found to be not sealed with fire barrier material. This condition has existed since plant construction
79-102/ 03L	11/08/79	12/05/79	30 Day LER	Reactor water conductivity exceeded TS limit due to condenser tube leaks
79-104/ 03L	11/10/79	12/10/79	30 Day LER	SRM A exhibited erratic operation during surveillance testing Problem cleared and cound not be recreated
79-105/ 03L	11/14/79	12/13/79	30 Day LER	Failure of EDG C lub oil recirculation pump
79-118/ 03L	12/31/79	01/28/80	30 Day LER	Drywell atmos monitor A failed while B monitor was out of service
80-001/ 03L	01/01/80	01/29/80	30 Day LER	APRM E downscale trip was found at 2/125 of scale vice TS limit 06 equal to or greater than 2.5/125 of scale
80-002/ 04X	01/02/80	02/12/80	30 Day LER	Makeup water system neutralizer tank discharge valve stuck open causing release of waste water with pH outside of TS limits
80-003/ 03L	01/06/80	01/29/80	30 Day LER	Torus water level decreased below TS limit during testing of torus to drywell vacuum breakers
80-004/ 03L	01/07/80	01/31/80	30 Day LER	Reactor low pressure switch for LPCI and CS permissive found out of spec during surveillance testing
80-005/ 03L	01/07/80	02/06/80	30 Day LER	Failed to take reactor water samples for chlorides, conductivity and iodine every four hours during plant startup
80-006/ 03L	01/08/80	02/06/80	30 Day LER	Management review of W/R indicated that core spray injection valve 14-MOV-12A did not operate properly during surveillance test

SUMMARY

INSPECTION SUMMARY

+ INSPECTION ON JANUARY 14-17, 1980 (80-01): ROUTINE, UNANNOUNCED INSPECTION OF THE LICENSEE'S (1) PLANT OPERATIONS; AND (2) PRE-REFUELING ACTIVITIES. THE INSPECTION CONSISTED OF TWENTY-FIVE (25) INSPECTOR HOURS ON-SITE BY ONE (1) NRC INSPECTOR. OF THE TWO (2) AREAS INSPECTED NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION ON JANUARY 28 - FEBRUARY 1, 1980 (80-02): SPECIAL, ANNOUNCED INSPECTION OF ACTIVITIES RELATED TO THE SECOND PERIODIC CONTAINMENT INTEGRATED LEAK RATE TEST. THE INSPECTION CONSISTED OF ONE-HUNDRED SIX INSPECTOR-HOURS ON SITE BY TWO NRC INSPECTORS. IN THE ONE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TECHNICAL SPECIFICATION 4.6.1, LIMITING CONDITION FOR OPERATION, BOTH DIESEL GENERATOR DAY TANKS CONTAINED LESS THAN 500 GALLONS WHILE REACTOR OPERATED AT POWER.
(8001 INFRACTION)

CONTRARY TO GENERALLY ACCEPTED PRACTICES IN THE INDUSTRY, A DIGITAL VOLTMETER WAS NOT WARMED UP AS REQUIRED BY THE MANUFACTURER'S TECHNICAL MANUAL AND ITS ACCURACY WAS THEREFORE QUESTIONABLE.
(8001 DEVIATION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

Areas related to potential equipment modification, which are under review and discussion with the NRC include: helium circulator auxiliaries; accident analysis relating to outlet temperature dispersion and orifice settings; hangers for 2" and smaller piping; and plant oscillations.

FACILITY ITEMS (PLANS AND PROCEDURES):

Implementation of 10 CFR 73.55

MANAGERIAL ITEMS:

PLANT STATUS:

THE REACTOR WAS SHUT DOWN ON 10/26/79 FOR THE REPLACEMENT OF 1B HELIUM CIRCULATOR WHICH DEVELOPED A LEAK IN THE STATIC SEAL ACTUATING MECHANISM. THE FACILITY IS EXPECTED TO BE STARTED UP IN EARLY MARCH. CIRCULATOR REPLACEMENT IS COMPLETE. THE PLANT IS WAITING FOR PARTS TO REPAIR THE ACM DIESEL GENERATOR.

LAST IE SITE INSPECTION DATE: DECEMBER 31, 1979 - JANUARY 31, 1980

INSPECTION REPORT NO: 50-267/80-01

SUMMARY

INSPECTION SUMMARY

INSPECTION DECEMBER 31, 1979 - JANUARY 31, 1979 (80-01): ROUTINE, ANNOUNCED INSPECTION OF REVIEW OF EVENT REPORTS; CALIBRATION; SURVEILLANCE; PART 21 REPORT; MAINTENANCE; PHYSICAL SECURITY; PLANT OPERATIONS; ONSITE REVIEW COMMITTEE; OFFSITE REVIEW COMMITTEE; REVIEW AND AUDITS; AND REPORT REVIEWS. WITHIN THE TWELVE (12) AREAS INSPECTED, ONE ITEM OF NONCOMPLIANCE WAS IDENTIFIED (INFRACTION - IMPROPER DESIGN) AND ONE DEVIATION FROM GENERALLY ACCEPTED PRACTICES IN INDUSTRY.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 71.3, "REQUIREMENT FOR LICENSE," REQUIRES THAT NO LICENSEE SUBJECT TO THE REGULATIONS IN THIS PART SHALL (A) DELIVER ANY LICENSED MATERIALS TO A CARRIER FOR TRANSPORT OR (B) TRANSPORT LICENSED MATERIAL EXCEPT AS AUTHORIZED IN A GENERAL LICENSE OR SPECIFIC LICENSE ISSUED BY THE COMMISSION, OR AS EXEMPTED IN THIS PART. CONTRARY TO THE ABOVE, ON JUNE 26, 1978, FEBRUARY 1, 1979, AND MAY 29, 1979, THE LICENSEE DELIVERED: 262 CI, 86 CI, AND 19.88 CI, RESPECTIVELY, OF LICENSED MATERIAL TO A CARRIER FOR TRANSPORT WITHOUT AUTHORIZATION IN A GENERAL OR A SPECIFIC LICENSE AND NO EXEMPTION TO 10 CFR 71 WAS APPLICABLE.
(7918 INFRACTION)

10 CFR 71.5, "TRANSPORTATION OF LICENSED MATERIAL," REQUIRES THAT NO LICENSEE DELIVER ANY LICENSED MATERIAL TO A CARRIER FOR TRANSPORT, UNLESS THE LICENSEE COMPLIES WITH THE APPLICABLE REQUIREMENTS OF THE DEPARTMENT OF TRANSPORTATION REGULATIONS 49 CFR PARTS 170-189. CONTRARY TO THE ABOVE, ON FEBRUARY 1, 1979, THE LICENSEE DELIVERED 86 CI OF LICENSED MATERIAL TO A CARRIER FOR TRANSPORT WITHOUT IDENTIFYING THE PRESENCE OF 58 MILLICURIES OF STRONTIUM 90 AS REQUIRED BY REGULATION 49 CFR PART 172.203(D).
(7918 INFRACTION)

10 CFR 71, APPENDIX E, CRITERION 16, STATES IN PART: "MEASURES SHALL BE ESTABLISHED TO ASSURE THAT CONDITIONS ADVERSE TO QUALITY...ARE...PROMPTLY CORRECTED." PROCEDURE A-1801, GINNA STATION RESPONSE TO INTERNAL AUDITS, REVISION 0, STEPS 3.3.1, 3.3.3 AND 3.3.5 STATE IN PART THAT INDIVIDUAL AUDIT FINDINGS ARE PRESENTED ON AUDIT FINDING CORRECTIVE ACTION REPORTS (AFCAR). THE RESPONSE TO THE AUDIT FINDING IS FORMULATED AND INCLUDES THE PROPOSED CORRECTIVE ACTION AND A TARGET COMPLETION DATE, AND THE RESPONSE IS SUBMITTED TO THE AUDIT TEAM LEADER ON OR BEFORE THE DUE DATE. CONTRARY TO THE ABOVE, AFCAR-1 OF AUDIT REPORT NO. 79-33:CA SPECIFIED A RESPONSE DUE DATE OF NOVEMBER 12, 1979; AND, AS OF DECEMBER 5, 1979 NO RESPONSE HAD BEEN FORMULATED.
(7918 INFRACTION)

10 CFR 71, APPENDIX E, "QUALITY ASSURANCE CRITERIA FOR SHIPPING PACKAGES OF RADIOACTIVE MATERIAL," CRITERION 5, "INSTRUCTIONS, PROCEDURES AND DRAWINGS" REQUIRES THAT ACTIVITIES AFFECTING QUALITY BE PRESCRIBED BY DOCUMENTED INSTRUCTIONS, PROCEDURES OR DRAWINGS OF A TYPE APPROPRIATE TO THE CIRCUMSTANCES AND THAT THESE ACTIVITIES BE ACCOMPLISHED IN ACCORDANCE WITH THESE INSTRUCTIONS, PROCEDURES OR DRAWINGS. CONTRARY TO THE ABOVE, ON FEBRUARY 1, 1979 AND MAY 29, 1979 THE LICENSEE DELIVERED 86 CI AND 19.88 CI OF LICENSED MATERIAL TO A CARRIER FOR TRANSPORT IN A PACKAGE WHICH WAS LOADED AND CLOSED WITHOUT WRITTEN PROCEDURES.
(7918 INFRACTION)

Nothing significant to report.

- LAST IE SITE INSPECTION DATE: 2/20-22/80
- INSPECTION REPORT NO: 50-213/80-03

SUMMARY

INSPECTION SUMMARY

- 50-213/79-20 - Nov 27-30 & Dec 3-7: Routine, unannounced inspection by a regional-based inspector and one HQ based NRR engineer (52 hours) of the Quality Assurance Program (QAP) implementation in the areas of QA/QC administration; design changes/modification program; design changes and modifications; document control program; QAP changes; and followup on previously identified items. Noncompliances: None.
- 50-213/79-21 - Dec 17-20: Special, unannounced inspection conducted by inspectors dispatched to the site in response to a release of radioactive materials through the plant vent stack on December 16, 1979. The inspection involved 81 hours onsite by three NRC inspectors. Noncompliances: One (Environmental Technical Specification 2.4.3.1 - release limit was exceeded).
- 50-213/80-01 - Jan 8-11: Routine, unannounced inspection by two regional-based inspectors (34 hours) of: Security Organization; Physical Barriers (Protected Area); Physical Barriers (Vital area); Lighting; Access Control (Identification, Authorization, Badging); Access Control (Vital Areas); Communications; and, Compensatory Measures. The inspection was initiated during back-shift hours. Noncompliances: 3 (Access Controls (Vital Area) - A vital area door was found unlocked and unattended; Compensatory Measures - Failure to maintain surveillance of protected area barriers and an exterior vital area door; and Communications - Failure to equip fixed security patrols with portable radios).
- 50-213/80-02 - Jan 22-25: Routine, announced inspection by two regional-based inspectors (36 hours) to discuss details related to establishment of an on-site office for a full-time NRC inspector at the facility, to turnover the assignment of the principal IE inspector and review of plant operations. Noncompliances: None.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TECHNICAL SPECIFICATION 6.8.1.C, THE FUEL LEVELS WERE NOT RECORDED ON THE DATA SHEET FOR FIRE PUMPS 2 AND 3, ON FEBRUARY 15, 1979, JUNE 26, 1979, JULY 29, 1979, AUGUST 16, 1979, SEPTEMBER 17, 1979 AND OCTOBER 8, 1979.
(8001 DEFICIENCY)

SAFETY RELATED CABINETS AT 130 FOOT CORRIDOR OF THE CONTROL BUILDING ARE NOT PROTECTED AGAINST DISCHARGE OF WATER FROM THE SPRINKLER SYSTEM AS STATED BY SECTION IV.C.1.4.(G) OF THE EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

DOCUMENTATION IS NOT PROVIDED TO DEMONSTRATE THAT THE FIRE PROTECTION MODIFICATIONS WERE ACCOMPLISHED UNDER THE CONTROL OF THE QA ORGANIZATION AS STATED BY SECTION IV.B.7 OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

COMBUSTIBLE MATERIALS ARE STORED IN EAST CABLEWAY WHICH IS CONTRARY TO SECTION III.C.4.(B) OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

HEAT DETECTORS ARE INSTALLED WITHIN THE CONTROL ROOM KITCHEN IN LIEU OF THE SMOKE DETECTORS STATED BY SECTION III.C.1.1 OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

FLOORS ARE NOT MARKED IN THE RIVER INTAKE STRUCTURE TO PROHIBIT THE STORAGE OF COMBUSTIBLES AS STATED BY SECTION III.C.4 OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

THE FIRE DOORS IN THE FIRE BARRIERS ENCLOSING THE CONTROL ROOM DO NOT FULLY MEET THE PROVISIONS OF NFPA-80 AS STATED BY THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM SECTION III.C.1.2.
(8002 DEVIATION)

CONTROL VALVES ON OIL DRAIN PIPING SYSTEM FROM REACTOR RECIRCULATION M-G SET ROOMS WERE NOT LOCKED CLOSED AS STATED BY TABLE 3, ITEM NO. III.43 OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

AUTOMATIC SPRINKLER SYSTEM INSTALLATIONS DO NOT FULLY MEET THE REQUIREMENTS OF NFPA-13 AS STATED BY SECTION IV.C.3.C OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

MOBILE PLATFORM FOR FIRE FIGHTING OPERATIONS IS NOT PROVIDED IN THE NORTHWEST CABLE AREA AS STATED BY TABLE 3, ITEM III.39 OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

FIRE BARRIER HAS NOT BEEN PROVIDED BETWEEN THE NO. 2 AND NO. 3 FIRE PUMP UNITS AS STATED BY SECTION IV.C.2.C OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

THE AIR COMPRESSOR FOR REFILLING THE SELF CONTAINED BREATHING APPARATUS CYLINDERS IS LOCATED IN THE WATER TREATMENT BUILDING IN LIEU OF THE DIESEL GENERATOR BUILDING AND IS NOT PROVIDED WITH AN EVAILABLE POWER SUPPLY IN THE EVENT OF LOSS OF OFF SITE POWER AS STATED BY SECTION IV.B.4.H OF THE LICENSEE'S EVALUATION OF THE FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

THE UNDERGROUND SUPPLY MAIN TO THE SPRINKLER/STANDPIPE SYSTEMS WITHIN THE RIVER INTAKE STRUCTURE DOES NOT MEET THE PROVISIONS OF NFPA-24 AS STATED BY SECTION IV.C.2.A OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

A NUMBER OF FIRE PROTECTION CONTROL VALVES WERE NOT PROVIDED WITH THE CORRECT TYPE OF VALVES SUPERVISION AS STATED BY SECTION IV.C.3.B OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

REPORTS RECEIVED FPOM LICENSEE

PLANT STATUS:

PLANT OPERATING AT FULL POWER.

* LAST IE SITE INSPECTION DATE: FEBRUARY 2-29, 1980

* INSPECTION REPORT NO: 50-321/80-11

SUMMARY

INSPECTION SUMMARY

* INSPECTION JANUARY 8-11 (80-01): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 13 INSPECTOR-HOURS ON SITE IN THE AREAS OF CALIBRATION OF IN-PLANT INSTRUMENTATION REQUIRED BY TECHNICAL SPECIFICATIONS; CALIBRATION OF MEASURING AND TEST EQUIPMENT USED ON SAFETY-RELATED SYSTEMS; AND SURVEILLANCE OF IN-PLANT EQUIPMENT REQUIRED BY TECHNICAL SPECIFICATIONS. OF THE THREE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE TO FOLLOW SURVEILLANCE TEST PROCEDURES).

INSPECTION JANUARY 8-11 (80-02): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED 13 INSPECTOR-HOURS ON SITE IN THE AREA OF FIRE PROTECTION/PREVENTION. OF THE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED; HOWEVER, 14 APPARENT DEVIATIONS WERE FOUND (INADEQUATE FIRE PROTECTION QA PROGRAM; SUBSTANDARD AUTOMATIC SPRINKLER SYSTEMS; STORAGE OF COMBUSTIBLES IN EAST CABLEWAY OF UNIT 1; INADEQUATE OIL CATCHMENT FACILITY FOR UNIT 2 RHR PUMPS; SIGNS TO PROHIBIT STORAGE OF COMBUSTIBLE MATERIALS NOT PROVIDED AT RIVER WATER INTAKE STRUCTURE; SUBSTANDARD FIRE DOORS BEEN CONTROL ROOM AND ADJACENT AREAS; INCORRECT TYPE FIRE DETECTORS IN CONTROL ROOM KITCHEN; INADEQUATE PROTECTION AGAINST SPRINKLER SYSTEM DISCHARGE FOR FOUR SAFETY-RELATED CABINETS - 130 FOOT ELEVATION OF CONTROL BUILDING CORRIDORS; MOBILE FIRE FIGHTING PLATFORM NOT PROVIDED FOR UNIT 1 NORTHWEST CABLE AREA; CONTROL VALVES IN DRAIN PIPING FROM REACTOR CIRCULATION M-G SETS NOT LOCKED IN CLOSED POSITION; INADEQUATE FIRE BARRIERS BETWEEN FIRE PUMP NOS. 2 AND 3; SUBSTANDARD SUPERVISION OF FIRE PROTECTION CONTROL VALVES; INCORRECT LOCATION OF AIR COMPRESSOR FOR EMERGENCY BREATHING APPARATUS; AND, SUBSTANDARD WATER SUPPLY TO SPRINKLER/STANDPIPE SYSTEM AT RIVER INTAKE STRUCTURE.

INSPECTION DECEMBER 12 - JANUARY 4 (80-04): THIS INSPECTION INVOLVED 35 INSPECTOR-HOURS ON SITE OF TECHNICAL SPECIFICATION COMPLIANCE, REPORTABLE OCCURRENCES, HOUSEKEEPING, OPERATOR PERFORMANCE, OVERALL PLANT OPERATIONS, QUALITY ASSURANCE PRACTICES, STATION AND CORPORATE MANAGEMENT PRACTICES, CORRECTIVE AND PREVENTATIVE MAINTENANCE ACTIVITIES, SITE SECURITY PROCEDURES, RADIATION CONTROL ACTIVITIES, AND SURVEILLANCE ACTIVITIES. OF THE 11 AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TEN AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO COMPLY WITH LCO ACTION STATEMENTS).

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TECHNICAL SPECIFICATION 6.8.1.C, THE INSTRUCTIONS OF HNP-2-9203 WERE NOT IMPLEMENTED BETWEEN JANUARY 1979 AND DECEMBER 1979. HOWEVER, A COMPUTER CODE WAS UTILIZED TO SATISFY THE REQUIREMENT WITHOUT CHANGING THE ASSIGNMENT SHEET TO REFLECT THIS METHOD OF OPERATION.
(8001 DEFICIENCY)

THE FIRE DOORS IN THE FIRE BARRIERS ENCLOSING THE CONTROL ROOM DO NOT FULLY MEET THE PROVISIONS OF NFPA-80 AS STATED BY THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM SECTION III.C.1.2.
(8002 DEVIATION)

FLOORS ARE NOT MARKED IN THE RIVER INTAKE STRUCTURE TO PROHIBIT THE STORAGE OF COMBUSTIBLES AS STATED BY SECTION III.C.4 OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

DOCUMENTATION IS NOT PROVIDED TO DEMONSTRATE THAT THE FIRE PROTECTION MODIFICATIONS WERE ACCOMPLISHED UNDER THE CONTROL OF THE QA ORGANIZATION AS STATED BY SECTION IV.B.7 OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

AUTOMATIC SPRINKLER SYSTEM INSTALLATIONS DO NOT FULLY MEET THE REQUIREMENTS OF NFPA-13 AS STATED BY SECTION IV.C.3.C OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

THE OIL CATCHMENT AREA BENEATH THE RHR PUMPS IS APPROXIMATELY 25% FULL OF AN OIL-WATER SOLUTION AND IS NOT FUNCTIONAL. THIS IS CONTRARY TO THE PROVISIONS OF SECTION III.C.4 OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

THE UNDERGROUND SUPPLY MAIN TO THE SPRINKLER/STANDPIPE SYSTEMS WITHIN THE RIVER INTAKE STRUCTURE DOES NOT MEET THE PROVISIONS OF NFPA-24 AS STATED BY SECTION IV.C.2.A OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

A NUMBER OF FIRE PROTECTION CONTROL VALVES WERE NOT PROVIDED WITH THE CORRECT TYPE OF VALVES SUPERVISION AS STATED BY SECTION IV.C.3.B OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

SAFETY RELATED CABINETS AT 130 FOOT CORRIDOR OF THE CONTROL BUILDING ARE NOT PROTECTED AGAINST DISCHARGE OF WATER FROM THE SPRINKLER SYSTEM AS STATED BY SECTION IV.C.1.4.(G) OF THE EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

HEAT DETECTORS ARE INSTALLED WITHIN THE CONTROL ROOM KITCHEN IN LIEU OF THE SMOKE DETECTORS STATED BY SECTION III.C.1.1 OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

FIRE BARRIER HAS NOT BEEN PROVIDED BETWEEN THE NO. 2 AND NO. 3 FIRE PUMP UNITS AS STATED BY SECTION IV.C.2.C OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

THE AIR COMPRESSOR FOR REFILLING THE SELF CONTAINED BREATHING APPARATUS CYLINDERS IS LOCATED IN THE WATER TREATMENT BUILDING IN LIEU OF THE DIESEL GENERATOR BUILDING AND IS NOT PROVIDED WITH AN EVAILABLE POWER SUPPLY IN THE EVENT OF LOSS OF OFF SITE POWER AS STATED BY SECTION IV.B.4.H OF THE LICENSEE'S EVALUATION OF THE FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

CONTROL VALVES ON OIL DRAIN PIPING SYSTEM FROM REACTOR RECIRCULATION M-G SET ROOMS WERE NOT LOCKED CLOSED AS STATED BY TABLE 3, ITEM NO. III.43 OF THE LICENSEE'S EVALUATION OF FIRE PROTECTION PROGRAM.
(8002 DEVIATION)

PLANT STATUS.

Defueled.

LAST IE SITE INSPECTION DATE: 7/24-27/79

INSPECTION REPORT NO: 50-03/79-02

SUMMARY

INSPECTION SUMMARY

None.

LICENSE STATUS

The unit produced electricity to the expiration date (October 31, 1974) of delay granted by the AEC for installation of an ECCS system. The ECCS system was not subsequently installed and the unit was defueled on January 30, 1976.

On February 11, 1980, the NRC requested the utility to show cause as to why the operating authority of the license should not be revoked and why the licensee should not submit a plan within 120 days of this order to decommission the unit.

SYSTEMS AND COMPONENT PROBLEMS:

None

FACILITY ITEMS (PLANS AND PROCEDURES):

Next scheduled refueling outage 1/1/81.

MANAGERIAL ITEMS:

(1) Confirmatory order issued February 11, 1980 concerning implementation of TMI Lessons Learned and Emergency Preparedness.

(2) The licensee has appointed a new Instrumentation and Control Supervisor and a new Security Supervisor.

PLANT STATUS:

Unit 2 returned to service on 2/10 after completion of turbine inspection and repairs.

LAST IE SITE INSPECTION DATE: 2/2/80

INSPECTION REPORT NO: 50-247/80-01

SUMMARY

INSPECTION SUMMARY

50-247/79-21 - Oct 14-Nov 10: Routine inspection (41 hours by 2 resident inspectors) of plant operations including: shift logs and records; tours of the facility; observations of physical security; Emergency Planning operations; surveillance testing; review of licensee events; and, follow-up on previous inspection items. No items of noncompliance were identified.

50-247/79-23 - Nov 11-Dec 8: Routine inspection (25 hours by 2 resident inspectors) of plant operations including: shift logs and records; tours of the facility; observations of physical security; Emergency Planning Drill; Reactor Coolant System Leakage and Pressurizer Safety Valve testing; periodic reports; and changes in station management staff. One item of noncompliance was identified (Failure to recognize a Quadrant Power Tilt calculation result in excess of Technical Specification limits).

50-247/79-24 - Nov 15-16: Routine, unannounced inspection of the licensee's response to IE Bulletin 79-19 including maintenance of regulatory requirements, training, audits and procedures. The inspection involved 28 hours onsite by two NRC region-based inspectors. Of the five areas inspected, one item of noncompliance was found (Failure to have copies of all documents referenced by the Certificate of Compliance).

5	02/20/80	F	15.5	A	3		CH	VALVEX	24 S/G HIGH LEVEL-REPAIRS MADE TO NO. 24 FEEDWATER REGULATOR.

SUMMARY

THE UNIT RETURNED TO POWER ON 02/10/80 FROM A TURBINE INSPECTION AND REPAIR OUTAGE, AND OPERATED AT REDUCED LOADS BECAUSE OF HIGHER THAN NORMAL CHLORIDES IN THE CONDENSATE. THE UNIT WAS AGAIN SHUTDOWN ON 02/14/80 DUE TO A SUDDEN INCREASE IN CHLORIDES FROM ALL CONDENSER SEXTANTS. FOLLOWING REPAIR OF A DOUBLE-ENDED TUBE BREAK IN THE NO. 24 CONDENSER, AND SEVERAL LESSER LEAKS IN OTHER CONDENSERS, THE UNIT WAS RETURNED TO SERVICE ON 02/20/80. STEAM GENERATOR LEVEL TRIPS OCCURRED ON STARTUP.

INSPECTION STATUS

ENFORCEMENT STATUS

ENVIRONMENTAL TECHNICAL SPECIFICATION 2.2.2 REQUIRES THAT THE AVERAGE INCREMENTAL INCREASE IN THE CONCENTRATION OF TOTAL SOLIDS IN THE CIRCULATING WATER RESULTING FROM THE NEUTRALIZING TANK DISCHARGE SHALL NOT EXCEED 2.0 MG/L. CONTRARY TO THE ABOVE REQUIREMENT, ON JUNE 7, 1979, A NEUTRALIZING TANK BATCH WITH A CALCULATED INCREMENTAL CONCENTRATION OF 2.429 MG/L OF NONRADIOACTIVE TOTAL SOLIDS IN THE CIRCULATING WATER SYSTEM WAS RELEASED TO THE PRE-TREATMENT LAGOON/CIRCULATING WATER SYSTEM.
(7920 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS

+ The plant was operating at 100% power at the end of the month.

+LAST IE SITE INSPECTION DATE: January 8-11, 1980

+ INSPECTION REPORT NO: 80-01

SUMMARY

INSPECTION SUMMARY

+ Inspection on December 3-7, (79-20): Routine, unannounced inspection of emergency planning, including: licensee internal audits; coordination with offsite support agencies; emergency facilities, supplies, and equipment; medical arrangement; training; emergency plan and implementing procedures; tests and drills; actions on previous environmental events; confirmatory measurements, including reviews of results of previous sample collection; quality control of analytical measurements; and collection of effluent samples for future comparative analyses. The inspection involved 33 inspector hours onsite by one NRC inspector. Of the 11 areas inspected, no apparent items of noncompliance or deviations were identified in 10 areas; one apparent item of noncompliance (release of total solids in excess of Technical Specification limit of 2.0 mg/l) was identified in one area.

+ Inspection on January 8-11, (80-01): Routine, announced inspection of an unresolved item, plant operations, nonroutine events, and IE Bulletin and Circular followup. The inspection involved 26 inspector hours onsite by one NRC inspector. The inspector was accompanied by one NRC inspector in training. No items of noncompliance or deviations were identified.

SUMMARY

OPERATION WAS ROUTINE DURING THE REPORT PERIOD, AT 85% RATED THERMAL POWER. THE 02/80 REFUELING OUTAGE HAS BEEN POSTPONED PENDING RECEIPT OF EQUIPMENT TO BE INSTALLED PER NUREG-0578. ON 02/01/80, THE REACTOR SCRAMMED ON A SIGNAL INDICATING LOW VOLTAGE AT THE TURBINE BUILDING 480V MOTOR CONTROL CENTER 1A. ALTHOUGH THE CAUSE OF THE UNDERVOLTAGE IS UNKNOWN, VIBRATION MAY HAVE CONTRIBUTED TO CONTACT ACTION. THE UNIT WAS RETURNED TO SERVICE ON 02/03/80.

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS:

- The reactor was made critical on March 9 after a 7-week refueling outage.
- LAST IE SITE INSPECTION DATE: 3/7/80
- INSPECTION REPORT NO: 50-309/80-04

SUMMARY

INSPECTION SUMMARY

- 50-309/79-19 - Nov 29-30: Special, unannounced inspection by a region-based inspector (16 hr. onsite) of licensee's response to IE Bulletin No. 79-19 including a review of copies of DOT and NRC regulations maintained onsite, procedures, training of personnel, records, and audits relating to the transfer, packaging, and shipping of low-level radioactive waste material. The inspector also reviewed licensee radiation protection training, surveys, and preparations for a scheduled refueling outage. No items of noncompliance were identified.
- 50-309/80-01 - Jan 21-25: Routine, unannounced inspection of refueling preparation; refueling activities; plant operations; licensee performance of review and audits and followup on selected Licensee Event Reports (LERs). The inspection involved 38 hours on site by two region-based inspectors. Two items of noncompliance were identified (failure to comply with Radiation Work Permit requirement; and, audible count rate monitor not operating in refueling cavity area).
- 50-309/80-02 - Jan 21-25: Routine, unannounced inspection by a region-based inspector (36 hr. onsite) of radiation protection during refueling including licensee action on IE circulars, procedures, advanced planning and preparation, training, exposure control, respiratory protection, posting and control, facility tours, and surveys. Upon arrival, a tour of the radiation control area was performed to observe radiation safety practices. One item of noncompliance was identified (failure to establish procedures).

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

* The isolation condenser was returned to standby service on February 11, following modifications to the steam line containment penetration pipe restraint. During the period that the system was isolated the reactor operated at a maximum power level of 40%. On February 21, the "A" Core Spray was considered inoperable when several damaged pipe restraints were identified.

PLANT STATUS:

* The plant has operated at 40% with the isolation condenser system out of service through February 11. Representative offgas and stack release rates at 100% power are 135,000 microcuries per second and 320 microcuries per second, respectively.

* LAST IE SITE INSPECTION DATE: 2/29/80

* INSPECTION REPORT NO: 50-245/80-03

SUMMARY

INSPECTION SUMMARY

* 50-245/79-29 - Dec 1-31: Routine, onsite regular and backshift inspection by two resident inspectors (60.5 hours). Areas inspected included the control rooms and the accessible portions of the primary containment, reactor, turbine, radioactive waste, gas turbine generator, and intake buildings; radiation protection; physical security; fire protection; plant operating records; surveillance testing; calibration; maintenance; core power distribution limits; and NRC reporting requirements. Noncompliances: None.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-002E	11/06/79	11/16/79	Environmental Deviation	Floor drain sample tank curie content found greater than TS limit. Tank was flushed refilled to within TS limit.
79-031/ 03L	10/16/79	11/15/79	30 Day LER	FWCI sybsystem inoperable to install two seismic restraints
79-032/ 03L	11/06/79	12/03/79	30 Day LER	Two of four high drywell pressure switch setpoints found slightly above TS limits
79-033/ 03L	11/13/79	12/04/79	30 Day LER	One of sixteen main steam line high flow switches found set higher than TS setpoint

UNIT SHUTDOWN/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
1	02/15/80	F	23.5	H	3				WHILE PERFORMING REACTOR SYSTEM MATRIX LOGIC & TRIP PATH RELAY TEST, THE REACTOR SCRAMMED. CAUSE OF THE TRIP WAS TRIP CIRCUIT BREAKER TCB-2 OPENING WHILE MATRIX TESTING OTHER BREAKERS.
2	02/26/80	F	16.3	H	3				MAIN GENERATOR LOCKOUT RESULTING IN REACTOR TRIP. CAUSE WAS INADVERTENT ACTUATION OF FAULT TRIP CIRCUITRY DURING TESTING AT THE SITE MAIN SWITCHYARD.
3	02/27/80	F	19.1	A	3		HH	VALVEX	REACTOR TRIPPED ON LOW S/G LEVEL DUE TO FEED REGULATOR VALVE LOCKUP. OVERHAULED FEED REG. VALVE.

SUMMARY

OPERATION WAS AT NEAR FULL POWER DURING THE REPORT PERIOD, EXCEPT FOR THREE REACTOR TRIPS. ON 02/15/80, THE REACTOR SCRAMMED WHEN A TRIP CIRCUIT BREAKER OPENED WHILE MATRIX TESTING OTHER BREAKERS. MAIN GENERATOR LOCKOUT RESULTED IN A REACTOR TRIP ON 02/26/80, FOLLOWING INADVERTENT ACTUATION OF FAULT TRIP CIRCUITRY DURING TESTING AT THE SITE MAIN SWITCHYARD. ON 02/27/80, THE REACTOR TRIPPED ON LOW STEAM GENERATOR LEVEL DUE TO FEED REGULATOR VALVE LOCKUP.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50.59 REQUIRES PROPOSED CHANGES TO THE TECHNICAL SPECIFICATIONS AND UNREVIEWED SAFETY QUESTIONS TO BE SUBMITTED TO AND APPROVED BY THE NRC PRIOR TO IMPLEMENTATION. CONTRARY TO THE ABOVE, THE LICENSEE DID NOT REQUEST NRC APPROVAL PRIOR TO IMPLEMENTATION OF A CHANGE TO THE TECHNICAL SPECIFICATIONS. SPECIFICALLY, ON MAY 1, 1979 THE MAXIMUM AVERAGE PLANAR EXPOSURE OF CYCLE 7 RELOAD 8DB262 FUEL EXCEEDED THE 30,000 MWD/STU FOR WHICH THE CORE WAS ANALYZED IN THE CYCLE 7 RELOAD ANALYSIS SUBMITTED TO THE NRC ON MARCH 21, 1978. ON DECEMBER 21, 1979, THE LICENSEE REQUESTED THAT TECHNICAL SPECIFICATION TABLE 3.1.11.1 (MAPLHGR VS EXPOSURE) BE EXTENDED BEYOND 30,000 MWD/STU. (7920 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

MANAGERIAL ITEMS

- Mr. D. E. Gilberts has been named Vice President - Power Production responsible for all electric generating activities including Nuclear Power Plant Operations. Mr. L. J. Watcher former Vice President - Power Production and System Operation has been named Vice President Power System Operation and Maintenance. (79-20)

PLANT STATUS

- Shut down for refueling.

- LAST IE SITE INSPECTION DATE: January 14, 1980

- INSPECTION REPORT NO: 80-01

SUMMARY

INSPECTION SUMMARY

- Inspection on December 18-20, (79-20): Routine, unannounced inspection of plant operations, nonroutine event followup, and IE Bulletin followup. The inspection involved 21 inspector hours onsite by one NRC inspector. Of the three areas inspected, no items of noncompliance were identified in two areas. One item was identified in one area (exceeding the maximum average linear power exposure).

- Inspection on January 14, (80-01): Licensee actions relative to IE Bulletin No. 79-14, including general discussion on NRC requirements, procedure review, and review of stress calculations and records. The inspection involved eight inspector hours at the consultant's office by one NRC inspector. No items of noncompliance or deviations were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION V, THE ACTIVITIES AFFECTING QUALITY WERE NOT ACCOMPLISHED IN ACCORDANCE WITH THE INSTRUCTIONS IN THAT NO USAGE INFORMATION HAD BEEN ESTABLISHED AND MAINTAINED FOR FOUR TORQUE WRENCHES (NQC 561, 526, 585, AND 586) WHICH WERE IN THE MEASURING AND TEST EQUIPMENT CALIBRATION PROGRAM AND ALSO A COMPLETE HISTORY RECORD FOR EACH DEVICE WAS NOT MAINTAINED.
(7949 DEFICIENCY)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION V, THE ACTIVITIES AFFECTING QUALITY WERE NOT ACCOMPLISHED IN ACCORDANCE WITH THE INSTRUCTIONS. VARIOUS CALCULATIONAL ERRORS/MISTAKES WERE CONTAINED IN THE DATA SHEETS OF THE FIVE DIFFERENT PT'S THROUGHOUT PT-11 (CORE REACTIVITY BALANCE) WHICH WAS PERFORMED ON 2/22/79, PT-20.2 (AXIAL FLUX DIFFERENCE) WHICH WAS COMPLETED ON 3/1/79, PT-31.1.1 (DELTA T/T AVG PROTECTION CHANNEL 1 FUNCTIONAL TEST - T412) WHICH WAS PERFORMED ON 6/14/79, PT-11 WHICH WAS COMPLETED ON 6/18/79, AND PT-24 (CALORIMETRIC) WHICH WAS PERFORMED ON 9/21/79. ALTHOUGH THESE DOCUMENTS HAD RECEIVED TWO LEVELS OF REVIEW, THE ERRORS/MISTAKES HAD NOT BEEN IDENTIFIED.
(7949 INFRACTION)

CONTRARY TO THE TECHNICAL SPECIFICATIONS 4.0.2.A AND 4.7.14.1.1.C, NO SURVEILLANCE TEST WAS PERFORMED FOR PT-100.3 (FIRE SUPPRESSION WATER SYSTEM - VALVE POSITION VERIFICATION) FOR ABOUT 61 DAYS BETWEEN 8/12/79 AND 10/13/79.
(7949 INFRACTION)

CONTRARY TO TECHNICAL SPECIFICATION 6.8.1.C, THE REQUIRED INSTRUCTIONS OF PT 75.2B WERE NOT IMPLEMENTED IN STEP 4.7.A OF THE PROCEDURE WHICH WAS PERFORMED ON 8/24/79, AND ALSO IN STEP 4.1 OF THE PROCEDURE WHICH WAS PERFORMED ON 5/24/79, IN THAT THE FREQUENCY WAS NOT DOUBLED IN THE FOLLOWING MONTH AND THE FLOW WAS NOT RECORDED IN THE STEP 4.1.
(7949 INFRACTION)

SUMMARY

INSPECTION SUMMARY

- INSPECTION JANUARY 29 - FEBRUARY 1 (80-01): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 28 INSPECTOR-HOURS ON SITE IN THE AREAS OF NON-RADIOLOGICAL ENVIRONMENTAL PROTECTION REQUIREMENTS INCLUDING WATER QUALITY MONITORING; BIOLOGICAL SURVEILLANCE; GENERAL ECOLOGICAL SURVEY; MANAGEMENT CONTROLS. OF THE FOUR AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 28-31 (80-02): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 32 INSPECTOR-HOURS ON SITE IN THE AREAS OF SOLID WASTE PACKAGING AND TRANSPORTATION, FACILITY RESPONSE TO IE BULLETIN 79-19, AND FOLLOWUP OF WORKER CONCERNS. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
80-001/01T-0	01/20/80	02/01/80	14 DAY LER	EXCESS LETDOWN LINES OVERSTRESSED DUE TO INCORRECT VALVE WEIGHT.
80-002/01T-0	01/08/80	01/18/80	14 DAY LER	PIPE HANGER STRESS EXCEEDS ALLOWABLE DUE TO VALVE WEIGHT ERROR.
80-008/01T-0	01/15/80	01/25/80	14 DAY LER	CONTROL ROOM AIR CONDITION CHILLER CONTROL PANEL NOT SEISMICALLY QUALIFIED.
80-010/01T-0	01/15/80	01/25/80	14 DAY LER	PIPE HANGERS IN SERVICE WATER SCREEN WASH SYSTEM OVERSTRESSED DUE TO ANALYSIS WITH INCORRECT VALVE WEIGHTS.

INSPECTION JANUARY 21-25 (80-06): INCLUDED REVIEW OF THE LICENSEE'S SECURITY PLAN, SECURITY PROGRAM AUDIT, SECURITY ORGANIZATION, VITAL AND PROTECTED AREA BARRIERS, SECURITY LIGHTING, ACCESS CONTROLS, ALARM STATIONS, DETECTION AND ASSESSMENT AIDS, COMMUNICATIONS, TESTING/MAINTENANCE OF SECURITY EQUIPMENT, COMPENSATORY MEASURES, ALARM RESPONSES, LOCKS/KEYS AND SECURITY RELATED RECORDS AND REPORTS. THE INSPECTION INVOLVED 62 INSPECTOR-HOURS ON SITE BY TWO NRC INSPECTORS. THE INSPECTION WAS BEGUN DURING AN OFFSHIFT PERIOD; 24 INSPECTION-HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIODS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE AREAS EXAMINED DURING THE INSPECTION EXCEPT FOR THE FOLLOWING ITEM: SECURITY ORGANIZATION - A WRITTEN SECURITY PROCEDURE DETAILING THE DUTIES OF INDIVIDUALS RESPONSIBLE FOR TESTING SPECIAL DETECTION EQUIPMENT WAS NOT ESTABLISHED. CORRECTIVE ACTION WAS COMPLETED AND INSPECTED ON JANUARY 24, 1980. NO RESPONSE REQUIRED.

INSPECTION FEBRUARY 6-8 (80-08): THIS ROUTINE ANNOUNCED INSPECTION INVOLVED 16 INSPECTOR-HOURS ON SITE IN THE AREAS OF IE BULLETIN 79-14, "SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS." NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

UNIT SHUTDOWNS/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
80-08	02/01/80	F	4.0	B	3				FEEDWATER SYSTEM FLOW OSCILLATION SET UP WHILE TESTING OF "B" STEAM GENERATOR LEVEL CONTROL SYSTEM CAUSED "A" STEAM GENERATOR TO GO HI. REACTOR TRIPPED FROM HI-HI LEVEL "A" STM. GEN.
80-09	02/20/80	F	93.4	H	3				HIGH NEGATIVE FLUX RATE TRIP-ALL 4 POWER RANGE CHANNELS. A CONTRACT LABORER CAUGHT HIS CLOTHING ON THE MOTOR BREAKER FOR THE CONTROL ROD DRIVE MOTOR GEN. SET CAUSING IT TO OPEN. THIS LOSS OF POWER TO THE CONTROL RODS CAUSED THEM TO FALL INTO THE CORE. AS THE ROD(S) ACCELERATED, A NEGATIVE FLUX RATE WAS SET UP CAUSING THE REACTOR TRIP.
80-10	02/24/80	F	2.7	G	3				LO-LO LEVEL "B" STEAM GENERATOR. WHILE RESTARTING THE UNIT, OPERATOR INEXPERIENCE.

SUMMARY

THE UNIT EXPERIENCED THREE TRIPS DURING THE REPORT PERIOD. ON 02/01/80, THE REACTOR TRIPPED WHEN FEEDWATER SYSTEM FLOW OSCILLATION DURING TESTING OF THE "B" STEAM GENERATOR LEVEL CONTROL SYSTEM CAUSED THE "A" STEAM GENERATOR LEVEL TO GO HI. ON 02/20/80, AN EMPLOYEE CAUGHT HIS CLOTHING ON THE REACTOR BREAKER FOR THE CONTROL ROD DRIVE MOTOR GENERATOR SET, CAUSING IT TO OPEN. AS THE CONTROL RODS FELL INTO THE CORE A NEGATIVE FLUX RATE WAS SET UP, CAUSING THE REACTOR TRIP. DURING RESTART ON 02/24/80, THE UNIT TRIPPED ON LO-LO LEVEL IN THE "B" STEAM GENERATOR.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 20.203(F), EACH CONTAINER OF LICENSED MATERIAL SHALL BEAR A DURABLE, CLEARLY VISIBLE LABEL IDENTIFYING THE RADIOACTIVE CONTENTS AND PROVIDING SUFFICIENT INFORMATION TO PERMIT INDIVIDUALS HANDLING OR USING THE CONTAINERS, OR WORKING IN THE VICINITY THEREOF TO TAKE PRECAUTIONS TO AVOID OR MINIMIZE EXPOSURES. ON NOVEMBER 27, 1979, FIVE BAGS OF RADIOACTIVE MATERIAL LOCATED ON THE UNIT 3 LOW PRESSURE INJECTION DECK, WERE OBSERVED WITHOUT THE PROPER LABELS.
(7935 DEFICIENCY)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.4, THE STATION SHALL BE OPERATED AND MAINTAINED IN ACCORDANCE WITH APPROVED PROCEDURES. (1) STATION PROCEDURE HP/0/B/1000/10, "WORKING LIMITS FOR CONTAMINATION CONTROL" STATES THAT IN AREAS WHERE CONTAMINATION EXISTS ABOVE THE WORKING LIMITS SPECIFIED, A POSTED AND/OR ROPED-OFF CONTAMINATION AREA WILL BE ESTABLISHED. PROCEDURE HP/0/B/1000/10 WAS NOT FOLLOWED IN THAT A POSTED AND/OR ROPED-OFF CONTAMINATION AREA WAS NOT ESTABLISHED ON NOVEMBER 19, 1979 AROUND FOUR UNIT 1 HIGH PRESSURE TURBINE HOLDOWN BOLTS CONTAMINATED ABOVE THE LIMITS SPECIFIED BY PROCEDURE. (2) STATION PROCEDURE OP/0/A/1102/06, "REMOVAL AND RESTORATION OF STATION EQUIPMENT", ENCLOSURE 7.1, STEP 7.1.13 SPECIFIES THE PROPER VALVE OR SPEAKER POSITION REQUIRED FOR RESTORATION OF A SYSTEM TO SERVICE. ON OCTOBER 16, 1979, WHILE RESTORING THE UNIT 3 LOW PRESSURE INJECTION SYSTEM "B" TRAIN TO SERVICE, VENT VALVE EGWD-152 WAS NOT CLOSED AS CALLED FOR ON THE REMOVAL AND RESTORATION OF STATION EQUIPMENT CHECKLIST, ALTHOUGH THE CHECKLIST WAS INSTALLED AND DATED INDICATING THE VALVE WAS LEFT IN THE PROPER POSITION.
(7935 INFRACTION)

CONTRARY TO THE QA PLAN, ACCEPTED BY NRC JUNE 29, 1978 IN WHICH DPC COMMITTED TO RG 1.39, ON JANUARY 30 AND 31, 1980 COMMITMENTS TO ADHERE TO STATED HOUSEKEEPING PRACTICES WITHIN PLANT AREAS OCCUPIED BY SAFETY RELATED EQUIPMENT WERE NOT FOLLOWED. SPECIFICALLY THE LOW PRESSURE INJECTION, BUILDING SPRAY AND HIGH PRESSURE INJECTION ROOMS CONTAINED EXCESS MATERIALS, EQUIPMENT AND DEBRIS WHICH APPARENTLY REMAINED FROM PREVIOUS JOB ACTIVITIES IN THESE LOCATIONS.
(8005 DEVIATION)

SUMMARY

INSPECTION SUMMARY

+ INSPECTION NOVEMBER 11 AND 15-16 (79-37): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 36 INSPECTOR-HOURS ON SITE IN THE AREAS OF TRANSIENT ANALYSIS AND REPORTABILITY REQUIREMENTS. OF THE TWO AREAS INSPECTED, TWO ITEMS OF NONCOMPLIANCE WERE FOUND IN ONE AREA (INFRACTION - INADEQUATE PROCEDURES TO CORRECT SPECIFIC AND FORESEEN POTENTIAL MALFUNCTIONS; AND INFRACTION - EXCESSIVE REACTOR COOLANT SYSTEM COOLDOWN RATE; ONE APPARENT DEVIATION WAS FOUND IN ONE AREA (FAILURE TO NOTIFY NRC WITHIN ONE HOUR WHEN UNIT 3 WAS IN AN UNEXPECTED OPERATING CONDITION).

INSPECTION JANUARY 21-25 AND JANUARY 28 - FEBRUARY 1 (80-04): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 18 INSPECTOR-HOURS ON SITE IN THE AREAS OF COORDINATION WITH OFFSITE SUPPORT AGENCIES, EMERGENCY FACILITIES, EQUIPMENT AND PROCEDURES, MEANS FOR DETERMINING A RELEASE, EMERGENCY TRAINING, EMERGENCY DRILLS, AND EMERGENCY ORGANIZATION. OF THE SIX AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 7-31 (80-05): THIS ROUTINE INSPECTION INVOLVED 20 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, OUTAGE ACTIVITIES, HOUSEKEEPING, FOLLOWUP OF IEB'S, IEC'S AND IE IN'S, PLANT TOURS AND WITNESSING A TEST. OF THE SIX AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FIVE AREAS; ONE APPARENT DEVIATION WAS FOUND IN ONE AREA (INADEQUATE HOUSEKEEPING).

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY 10 CFR 20.203(F), EACH CONTAINER OF LICENSED MATERIAL SHALL BEAR A DURABLE, CLEARLY VISIBLE LABEL IDENTIFYING THE RADIOACTIVE CONTENTS AND PROVIDING SUFFICIENT INFORMATION TO PERMIT INDIVIDUALS HANDLING OR USING THE CONTAINERS, OR WORKING IN THE VICINITY THEREOF TO TAKE PRECAUTIONS TO AVOID OR MINIMIZE EXPOSURES. ON NOVEMBER 27, 1979, FIVE BAGS OF RADIOACTIVE MATERIAL LOCATED ON THE UNIT 3 LOW PRESSURE INJECTION DECK, WERE OBSERVED WITHOUT THE PROPER LABELS.
(7932 DEFICIENCY)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.4, THE STATION SHALL BE OPERATED AND MAINTAINED IN ACCORDANCE WITH APPROVED PROCEDURES. (1) STATION PROCEDURE HP/0/B/1000/10, "WORKING LIMITS FOR CONTAMINATION CONTROL" STATES THAT IN AREAS WHERE CONTAMINATION EXISTS ABOVE THE WORKING LIMITS SPECIFIED, A POSTED AND/OR ROPED-OFF CONTAMINATION AREA WILL BE ESTABLISHED. PROCEDURE HP/0/B/1000/10 WAS NOT FOLLOWED IN THAT A POSTED AND/OR ROPED-OFF CONTAMINATION AREA WAS NOT ESTABLISHED ON NOVEMBER 19, 1979 AROUND FOUR UNIT 1 HIGH PRESSURE TURBINE HOLDOWN BOLTS CONTAMINATED ABOVE THE LIMITS SPECIFIED BY PROCEDURE. (2) STATION PROCEDURE OP/0/A/1102/06, "REMOVAL AND RESTORATION OF STATION EQUIPMENT", ENCLOSURE 7.1, STEP 7.1.13 SPECIFIES THE PROPER VALVE OR SPEAKER POSITION REQUIRED FOR RESTORATION OF A SYSTEM TO SERVICE. ON OCTOBER 16, 1979, WHILE RESTORING THE UNIT 3 LOW PRESSURE INJECTION SYSTEM "B" TRAIN TO SERVICE, VENT VALVE EGWD-152 WAS NOT CLOSED AS CALLED FOR ON THE REMOVAL AND RESTORATION OF STATION EQUIPMENT CHECKLIST, ALTHOUGH THE CHECKLIST WAS INSTALLED AND DATED INDICATING THE VALVE WAS LEFT IN THE PROPER POSITION.
(7932 INFRACTION)

TECHNICAL SPECIFICATION 6.4.1 E REQUIRES PREVENTIVE OR CORRECTIVE MAINTENANCE TO BE ACCOMPLISHED BY ADHERING TO APPROVED WRITTEN PROCEDURES. ON DECEMBER 9, 1979 AN I&E TECHNICIAN PERFORMED MAINTENANCE ON TWO UNIT 2 ENGINEERED SAFEGUARDS VALVES WHILE THE UNIT WAS AT 99% FULL POWER WHEREAS HIS ASSIGNED TASK WAS TO PERFORM MAINTENANCE ON THESE SAME VALVES FOR UNIT 1, WHICH WAS IN A REFUELING OUTAGE.
(7939 INFRACTION)

CONTRARY TO THE QA PLAN, ACCEPTED BY NRC JUNE 29, 1978 IN WHICH DPC COMMITTED TO RG 1.39, ON JANUARY 30 AND 31, 1980 COMMITMENTS TO ADHERE TO STATED HOUSEKEEPING PRACTICES WITHIN PLANT AREAS OCCUPIED BY SAFETY RELATED EQUIPMENT WERE NOT FOLLOWED. SPECIFICALLY THE LOW PRESSURE INJECTION, BUILDING SPRAY AND HIGH PRESSURE INJECTION ROOMS CONTAINED EXCESS MATERIALS, EQUIPMENT AND DEBRIS WHICH APPARENTLY REMAINED FROM PREVIOUS JOB ACTIVITIES IN THESE LOCATIONS.

INSPECTION SUMMARY

+ INSPECTION NOVEMBER 11 AND 15-16 (79-37): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 36 INSPECTOR-HOURS ON SITE IN THE AREAS OF TRANSIENT ANALYSIS AND REPORTABILITY REQUIREMENTS. OF THE TWO AREAS INSPECTED, TWO ITEMS OF NONCOMPLIANCE WERE FOUND IN ONE AREA (INFRACTION - INADEQUATE PROCEDURES TO CORRECT SPECIFIC AND FORESEEN POTENTIAL MALFUNCTIONS; AND INFRACTION - EXCESSIVE REACTOR COOLANT SYSTEM COOLDOWN RATE; ONE APPARENT DEVIATION WAS FOUND IN ONE AREA (FAILURE TO NOTIFY NRC WITHIN ONE HOUR WHEN UNIT 3 WAS IN AN UNEXPECTED OPERATING CONDITION).

INSPECTION JANUARY 21-25 AND JANUARY 28 - FEBRUARY 1 (80-03): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 18 INSPECTOR-HOURS ON SITE IN THE AREAS OF COORDINATION WITH OFFSITE SUPPORT AGENCIES, EMERGENCY FACILITIES, EQUIPMENT AND PROCEDURES, MEANS FOR DETERMINING A RELEASE, EMERGENCY TRAINING, EMERGENCY DRILLS, AND EMERGENCY ORGANIZATION. OF THE SIX AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 7-31 (80-04): THIS ROUTINE INSPECTION INVOLVED 19 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, HOUSEKEEPING, FOLLOWUP OF IEB'S, IEC'S AND IE IN'S, PLANT TOURS AND WITNESSING A TEST. OF THE FIVE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FOUR AREAS; ONE APPARENT DEVIATIONS WAS FOUND IN ONE AREA (INADEAUATE HOUSEKEEPING).

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 20.201(B) ON MARCH 16, 1979, RADIATION SURVEYS NECESSARY TO ASSURE COMPLIANCE WITH 10 CFR 20.101, "EXPOSURE OF INDIVIDUALS TO RADIATION IN RESTRICTED AREAS" WERE NOT PERFORMED IN SUPPORT OF WORK ACTIVITIES CONDUCTED IN ACCORDANCE WITH RADIOACTIVE WORK PERMIT (RWP) NO. 062279. RWP NO. 062279 WAS ISSUED BASED ON SURVEY DATA COMPILED ON MARCH 1, 1979 AND INDICATED THAT THE RADIATION LEVELS IN THE WORK AREA WERE 1.0 MREM PER HOUR. ACTUAL RADIATION LEVELS IN THE WORK AREA MEASURED AS HIGH AS 200 MREM/HR ON MARCH 16, 1979. CONTRARY TO 10 CFR 20.201(B) BETWEEN MARCH 16 AND APRIL 26, 1979, NO EVALUATIONS WERE MADE TO DETERMINE THE RADIATION EXPOSURE RECEIVED AS A RESULT OF THE RADIATION DOSE TO THE SKIN OF THREE INDIVIDUALS WHO BECAME EXTENSIVELY CONTAMINATED WITH RADIOACTIVE WATER (PRIMARY COOLANT) WHILE PERFORMING ACTIVITIES IN ACCORDANCE WITH RADIOACTIVE WORK PERMIT NO. 062279. INITIAL RADIATION LEVELS AS HIGH AS 224 MRADS PER HOUR WERE MEASURED ON THE SKIN SURFACES OF THE INDIVIDUALS ON MARCH 16, 1979.
(7907 INFRACTION)

TECHNICAL SPECIFICATION 6.11, "RADIATION PROTECTION PROGRAMS," STATES, "PROCEDURES FOR PERSONNEL RADIATION PROTECTION SHALL BE PREPARED CONSISTENT WITH THE REQUIREMENTS OF 10 CFR PART 20 AND SHALL BE APPROVED, MAINTAINED AND ADHERED TO FOR ALL OPERATIONS INVOLVING PERSONNEL RADIATION EXPOSURE." CONTRARY TO THE ABOVE, ON MARCH 16, 1979, SIX PROCEDURES, WRITTEN PURSUANT TO THIS SPECIFICATION WERE NOT ADHERED TO IN REGARD TO ACTIVITIES CONDUCTED AS PERMITTED BY RWP NO. 062279, "CUT DWEDT DISCHARGE LINE AND CAP."
(7907 INFRACTION)

10 CFR 19.12, "INSTRUCTIONS TO WORKERS," STATES, "ALL INDIVIDUALS WORKING IN OR FREQUENTING ANY PORTION OF A RESTRICTED AREA SHALL BE KEPT INFORMED OF THE STORAGE, TRANSFER, OR USE OF RADIOACTIVE MATERIALS OR OF RADIATION IN SUCH PORTIONS OF THE RESTRICTED AREA; SHALL BE INSTRUCTED IN THE HEALTH PROTECTION PROBLEMS ASSOCIATED WITH EXPOSURE TO SUCH RADIOACTIVE MATERIALS OR RADIATION, IN PRECAUTIONS OR PROCEDURES TO MINIMIZE EXPOSURE, AND IN THE PURPOSES AND FUNCTIONS OF PROTECTIVE DEVICES EMPLOYED." THE EXTENT OF THOSE INSTRUCTIONS SHALL BE COMMENSURATE WITH POTENTIAL RADIOLOGICAL HEALTH PROTECTION PROBLEMS IN THE RESTRICTED AREA. IN ADDITION, HEALTH PHYSICS PROCEDURE 902.1, REVISION 13, RADIOACTIVE WORK PERMITS STATES IN SECTION 4.1, "WORKING PERSONNEL SHOULD BE BRIEFED ON THE WORK TO BE PERFORMED AND THE RADIOLOGICAL SAFETY PROCEDURES APPLICABLE TO THE JOB." CONTRARY TO THE ABOVE, ON MARCH 16, 1979, TWO INDIVIDUALS WERE DIRECTED TO PERFORM WORK IN ACCORDANCE WITH RADIOACTIVE WORK PERMIT NO. 062279, "CUT DWEDT DISCHARGE LINE AND CAP-SW CORNER OF RX BUILDING IN PIPE TUN" WITHOUT BEING INFORMED OF THE SPECIFIC RADIOLOGICAL HAZARDS ASSOCIATED WITH THIS ACTIVITY. AS A RESULT THE PERSONNEL WERE NOT AWARE OF THE POTENTIAL RADIOLOGICAL HEALTH PROTECTION PROBLEMS ASSOCIATED WITH THE WORK AND WERE NOT ADVISED OF PRECAUTIONS AND PROCEDURES TO MINIMIZE THEIR EXPOSURE.
(7907 INFRACTION)

CONTRARY TO 10 CFR 20.201(B) ON MARCH 16, 1979, RADIATION SURVEYS NECESSARY TO ASSURE COMPLIANCE WITH 10 CFR 20.101, "EXPOSURE OF INDIVIDUALS TO RADIATION IN RESTRICTED AREAS" WERE NOT PERFORMED IN SUPPORT OF WORK ACTIVITIES CONDUCTED IN ACCORDANCE WITH RADIOACTIVE WORK PERMIT (RWP) NO. 062279. RWP NO. 062279 WAS ISSUED BASED ON SURVEY DATA COMPILED ON MARCH 1, 1979 AND INDICATED THAT THE RADIATION LEVELS IN THE WORK AREA WERE 1.0 MREM PER HOUR. ACTUAL RADIATION LEVELS IN THE WORK AREA MEASURED AS HIGH AS 200 MREM/HR ON MARCH 16, 1979. CONTRARY TO 10 CFR 20.201(B) BETWEEN MARCH 16 AND APRIL 26, 1979, NO EVALUATIONS WERE MADE TO DETERMINE THE RADIATION EXPOSURE RECEIVED AS A RESULT OF THE RADIATION DOSE TO THE SKIN OF THREE INDIVIDUALS WHO BECAME EXTENSIVELY CONTAMINATED WITH RADIOACTIVE WATER (PRIMARY COOLANT) WHILE PERFORMING ACTIVITIES IN ACCORDANCE WITH RADIOACTIVE WORK PERMIT NO. 062279. INITIAL RADIATION LEVELS AS HIGH AS 224 MRADS PER HOUR WERE MEASURED ON THE SKIN SURFACES OF THE INDIVIDUALS ON MARCH 16, 1979.
(7907 INFRACTION)

(SEE CONTINUATION PAGE 0-9A)

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-043/ 03L	12/28/79	01/25/80	30 Day LER	Failure of one reactor building to torus vacuum breaker to open during surveillance testing
80-002/ 03L	01/16/80	02/15/80	30 Day LER	One fuel bundle found misoriented 180 degrees. Subsequent testing indicated no damage to the bundle
80-003/ 01T	01/16/80	01/30/80	24 Hours	Discovery of two crack indications in core spray sparge (system 2)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- Three additional small cracks were identified in the core spray system II sparger during inspection and evaluation of previously identified and reported cracks.

PLANT STATUS:

- The plant is shutdown for refueling with return to operation scheduled for May 1, 1980.

- LAST IE SITE INSPECTION DATE: 3/15/80

- INSPECTION REPORT NO: 50-219/80-09

SUMMARY

INSPECTION SUMMARY

- 50-219/79-07 - Apr 18-20 & Jul 19-20: Special, unannounced inspection by 3 regional-based inspectors (64 hours) of the Radiation Protection Program as a result of written allegations. Areas inspected included Radiation Protection Procedures, Instructions to Personnel, Personnel Exposure Control and Surveys. Noncompliances: 5 (failure to perform surveys in accordance with 10 CFR 20.201 sufficient to assure compliance with 10 CFR 20.101; failure to perform survey in accordance with 10 CFR 20.201 sufficient to assure compliance with 10 CFR 20.103; failure to instruct workers in accordance with 10 CFR 19.12; failure to adhere to procedures in accordance with Technical Specification 6.11; failure to adhere to procedures in accordance with Technical Specification 6.8).

- 50-219/79-18 - Oct 1-5, 15-19, 29-31, Nov 1,2, & 6-8: Special, announced inspection by 6 IE Performance Appraisal Branch inspectors (752 hours) of the licensee's management controls over licensed activities. Noncompliances: 14 (failure to provide independent verification when removing/placing tags, jumpers, and leads; fire doors blocked open; inadequate drawing; inadequate procedures; failure to follow procedures; inadequate document control storage; failure to follow procedures; inadequate corrective action to QA findings; failure to audit; improper storage identification of weldrod; failure to establish calibration procedures; failure to survey effluent releases; failure to analyze Standby Gas Treatment System charcoal absorbers for removal efficiency; failure to report).

- 50-219/79-20 - Nov 27-30: Routine, unannounced inspection by one regional-based inspector (32 hours), initiated during a backshift, of: Security Plan, Security Program Audit, Security Organization, Physical Barriers (Protected Areas), Physical Barriers (Vital Area), Lighting, Access Control (Identification, Authorization, and Badging), Access Control (Escorting), Access Control (Search), Access Control (Vital Areas), Alarm Stations, Detection Aids, Assessment Aids, Communications, Testing and Maintenance, Compensatory Measures, Response, Locks, Keys, and Combinations, Records and Reports, followup of previously identified items and a review of licensee actions taken as a result of IE Bulletin 79-16. Noncompliances: None.

- 50-219/79-23 - Dec 9-14, 18-19 & Jan 4: Routine, unannounced inspection by one regional-based inspector (63 hours) of the Radioactive Waste Management System including: liquid and gaseous radioactive effluent releases; reactor coolant water quality; calibration and functional tests; standby gas treatment system; planning and preparation; solid radioactive waste, training, licensee action on IE Bulletin 79-19 and Licensee Event Report 50-219/79-41/3L and radiation safety control procedure adherence and practices. Noncompliances: 4 (failure to survey to meet 10 CFR 20.201; failure to meet 10 CFR 71.3; failure to maintain records pursuant to 10 CFR 71.62; failure to file request for change in Technical Specifications as required by 10 CFR 50.59(c)).

- 50-219/80-01 - Jan 4-6, 8-11 & 14: Routine, onsite, unannounced inspection by one regional-based inspector (59 hours) of 4 inspection areas: refueling preparation; refueling activities; independent inspection effort; and, IE Bulletin followup. Plant tours were also conducted. Noncompliances: None.

- 50-219/80-02 - Jan 15-18: Routine, onsite, announced inspection by one region-based inspector (34 hours) of five modifications, onsite LER followup; and independent effort. Noncompliances: None.

- 50-219/80-05 - Jan 29 - Feb 1: Routine, onsite, unannounced inspection by one regional-based inspector (42.5 hours) of 5 inspection areas: refueling activities; independent inspection effort; IE Bulletin followup; in-office licensee event report review; and, in-office periodic report review. Plant tours were also conducted. Noncompliances: None.

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 20.103(A)(3) ON MARCH 16, 1979, SURVEYS OF CONCENTRATIONS OF RADIOACTIVE MATERIALS IN AIR WERE NOT MADE TO SUPPORT WORK WHICH HAD THE POTENTIAL FOR SUBJECTING PERSONNEL TO EXPOSURE FROM AIRBORNE RADIOACTIVE MATERIALS IN AIR. SUCH WORK WAS PERFORMED BY INDIVIDUALS IN ACCORDANCE WITH THE FOLLOWING RADIOACTIVE WORK PERMITS (RWPS): 061979 - RUN TEMP PIPE LINE, DWEDT LINE-HUB DRAIN IN CSHX AREA; 062279 - CUT DWEDT DISCHARGE LINE AND CAP-SW CORNER OF RX BUILDING IN PIPE TUN. CONTRARY TO 10 CFR 20.103(A)(3) FOR THE PERIOD BETWEEN MARCH 16 AND APRIL 20, 1979, NO EVALUATIONS SUCH AS MEASUREMENTS OF RADIOACTIVITY IN THE BODY, MEASUREMENTS OF RADIOACTIVITY EXCRETED FROM THE BODY OR ANY COMBINATION OF SUCH MEASUREMENTS, WAS MADE ON THREE INDIVIDUALS PERFORMING WORK IN ACCORDANCE WITH RADIOACTIVE WORK PERMIT 062279, IN WHICH THE PERSONNEL WERE SUBJECT TO EXTENSIVE CONTAMINATION RESULTING IN A DOSE RATE AS HIGH AS 224 MRADS PER HOUR ON THE UPPER PORTIONS OF THE PERSONS HEAD AND FACE.
(7907 INFRACTION)

TECHNICAL SPECIFICATION 6.8.1, "PROCEDURES" STATES, "WRITTEN PROCEDURES SHALL BE ESTABLISHED, IMPLEMENTED (ADHERED TO), AND MAINTAINED THAT MEET OR EXCEED THE REQUIREMENTS OF SECTION 5.1 AND 5.3 OF AMERICAN NATIONAL STANDARD N18.7-1972 AND APPENDIX 'A' OF THE NUCLEAR REGULATORY COMMISSION'S REGULATORY GUIDE 1.33-1972...." PROCEDURE 79-7, REVISION 0, REPAIR OF DWEDT DISCHARGE LINE, WRITTEN IN ACCORDANCE WITH THIS SPECIFICATION, STATES THE FOLLOWING: "3.0 PREREQUISITES...3.5. ENSURE THE DISCHARGE LINE IS APPROPRIATELY ISOLATED, DRAINED AND TAGGED PRIOR TO CUTTING INTO IT. 5.0 INSTRUCTIONS...5.1.4. ENSURE THE SECTION OF THE DISCHARGE LINE TO BE CUT IS ISOLATED, DRAINED AND TAGGED. CONTACT THE GROUP SHIFT SUPERVISOR FOR NOTIFICATION." CONTRARY TO THE ABOVE, ON MARCH 16, 1979, PROCEDURE 79-7, REVISION 0, WAS NOT ADHERED TO IN THAT THE DISCHARGE LINE WAS NOT ISOLATED AND DRAINED PRIOR TO CUTTING THE PIPE. CONSEQUENTLY, SEVERAL PERSONS RECEIVED EXTENSIVE RADIOACTIVE CONTAMINATION WHEN THEY WERE SPRAYED WITH THE LIQUID CONTENTS (PRIMARY REACTOR COOLANT) OF THE PIPE WHICH WAS UNDER AN ESTIMATED 22 PSI OF PRESSURE WHEN THE PIPE CUT WAS MADE. RADIATION LEVELS AS HIGH AS 224 MRAD/HR WERE MEASURED OVER THE ENTIRE SKIN SURFACES OF ONE OF THE INDIVIDUALS AND IN VARIOUS LOCATIONS OF THE BODY OF THE TWO OTHER INDIVIDUALS WHO WERE EXPOSED.
(7907 INFRACTION)

TECHNICAL SPECIFICATION 6.11, "RADIATION PROTECTION PROGRAMS," STATES, "PROCEDURES FOR PERSONNEL RADIATION PROTECTION SHALL BE PREPARED CONSISTENT WITH THE REQUIREMENTS OF 10 CFR PART 20 AND SHALL BE APPROVED, MAINTAINED AND ADHERED TO FOR ALL OPERATIONS INVOLVING PERSONNEL RADIATION EXPOSURE." CONTRARY TO THE ABOVE, ON MARCH 16, 1979, SIX PROCEDURES, WRITTEN PURSUANT TO THIS SPECIFICATION WERE NOT ADHERED TO IN REGARD TO ACTIVITIES CONDUCTED AS PERMITTED BY RWP NO. 062279, "CUT DWEDT DISCHARGE LINE AND CAP."
(7907 INFRACTION)

10 CFR 19.12, "INSTRUCTIONS TO WORKERS," STATES, "ALL INDIVIDUALS WORKING IN OR FREQUENTING ANY PORTION OF A RESTRICTED AREA SHALL BE KEPT INFORMED OF THE STORAGE, TRANSFER, OR USE OF RADIOACTIVE MATERIALS OR OF RADIATION IN SUCH PORTIONS OF THE RESTRICTED AREA; SHALL BE INSTRUCTED IN THE HEALTH PROTECTION PROBLEMS ASSOCIATED WITH EXPOSURE TO SUCH RADIOACTIVE MATERIALS OR RADIATION, IN PRECAUTIONS OR PROCEDURES TO MINIMIZE EXPOSURE, AND IN THE PURPOSES AND FUNCTIONS OF PROTECTIVE DEVICES EMPLOYED." THE EXTENT OF THOSE INSTRUCTIONS SHALL BE COMMENSURATE WITH POTENTIAL RADIOLOGICAL HEALTH PROTECTION PROBLEMS IN THE RESTRICTED AREA. IN ADDITION, HEALTH PHYSICS PROCEDURE 902.1, REVISION 13, RADIOACTIVE WORK PERMITS STATES IN SECTION 4.1, "WORKING PERSONNEL SHOULD BE BRIEFED ON THE WORK TO BE PERFORMED AND THE RADIOLOGICAL SAFETY PROCEDURES APPLICABLE TO THE JOB." CONTRARY TO THE ABOVE, ON MARCH 16, 1979, TWO INDIVIDUALS WERE DIRECTED TO PERFORM WORK IN ACCORDANCE WITH RADIOACTIVE WORK PERMIT NO. 062279, "CUT DWEDT DISCHARGE LINE AND CAP-SW CORNER OF RX BUILDING IN PIPE TUN" WITHOUT BEING INFORMED OF THE SPECIFIC RADIOLOGICAL HAZARDS ASSOCIATED WITH THIS ACTIVITY. AS A RESULT THE PERSONNEL WERE NOT AWARE OF THE POTENTIAL RADIOLOGICAL HEALTH PROTECTION PROBLEMS ASSOCIATED WITH THE WORK AND WERE NOT ADVISED OF PRECAUTIONS AND PROCEDURES TO MINIMIZE THEIR EXPOSURE.
(7907 INFRACTION)

LICENSEE EMERGENCY PROCEDURES USED TO COPE WITH MAY 2, 1979 EVENT WERE NOT APPROPRIATE FOR THE CIRCUMSTANCES AND WERE A MAJOR CAUSATIVE FACTOR IN THAT EVENT. 10 CFR 50 APPENDIX B, CRITERION 5.
(7910 VIOLATION)

10 CFR 20.201, "SURVEYS" STATES IN PARAGRAPH (B) THAT "EACH LICENSEE SHALL MAKE OR CAUSE TO BE MADE SUCH SURVEYS AS MAY BE NECESSARY FOR HIM TO COMPLY WITH THE REGULATIONS IN THIS PART." PARAGRAPH (A) OF 20.201 DEFINES "SURVEY" AS "AN EVALUATION OF THE RADIATION HAZARDS INCIDENT TO THE PRODUCTION, USE, RELEASE, DISPOSAL OR PRESENCE OF RADIOACTIVE MATERIALS...." 10 CFR 20.301, "WASTE DISPOSAL," GENERAL REQUIREMENTS, SPECIFIES THAT NO LICENSEE SHALL DISPOSE OF LICENSED MATERIAL EXCEPT BY TRANSFER TO AN AUTHORIZED RECIPIENT AS PROVIDED IN 10 CFR 30... 10 CFR 30.41, "TRANSFER OF BYPRODUCT MATERIAL" REQUIRES THAT NO LICENSE SHALL TRANSFER BYPRODUCT MATERIAL EXCEPT AS AUTHORIZED PURSUANT TO THIS SECTION. THIS SECTION PERMITS TRANSFERS TO PERSONS AUTHORIZED TO RECEIVE BYPRODUCT UNDER TERMS OF A LICENSE ISSUED BY AN AGREEMENT STATE. CHEM NUCLEAR SYSTEMS, INC.'S AGREEMENT STATE LICENSE FOR THE BARNWELL, SOUTH CAROLINA BURIAL SITE (SOUTH CAROLINA RADIOACTIVE MATERIAL LICENSE NO. 097) SPECIFIES IN LICENSE CONDITION 25 THAT SOLIDIFIED RADIOACTIVE WASTE HAVING DETECTABLE FREE STANDING LIQUIDS WILL NOT BE PERMITTED TO BE RECEIVED BY THE BURIAL SITE. SOUTH CAROLINA HAS DEFINED "NO DETECTABLE FREE STANDING LIQUID" AS LESS THAN 1.0% LIQUID BY VOLUME. CONTRARY TO THE ABOVE, NO SURVEYS WERE PERFORMED TO DETERMINE THE AMOUNT, IF ANY, OF FREE STANDING LIQUID IN A SHIPMENT OF DEWATERED RESINS (SHIPMENT NO. OC-1148-79) SHIPPED BY THE LICENSEE TO THE BURIAL SITE ON DECEMBER 10, 1979. NOTWITHSTANDING THE ABOVE SHIPMENT, NO DOCUMENTATION WAS AVAILABLE TO INDICATE PREVIOUS SHIPMENTS OF SOLIDIFIED WASTE HAD BEEN SURVEYED WITH RESPECT TO THE ABOVE.
(7923 INFRACTION)

10 CFR 50, DOMESTIC LICENSING OF PRODUCTION AND UTILIZATION FACILITIES, SECTION 50.59, CHANGES, TESTS AND EXPERIMENTS, SPECIFIES IN PARAGRAPH (A) THAT THE HOLDER OF A LICENSE AUTHORIZING OPERATION OF A UTILIZATION FACILITY MAY MAKE CHANGES IN THE FACILITY AS DESCRIBED IN THE SAFETY ANALYSIS REPORT, WITHOUT PRIOR COMMISSION APPROVAL, UNLESS THE PROPOSED CHANGE INVOLVES A CHANGE IN THE TECHNICAL SPECIFICATIONS INCORPORATED IN THE LICENSE OR AN UNREVIEWED SAFETY QUESTION. ADDITIONALLY, 10 CFR 50.59(C) SPECIFIES THAT THE HOLDER OF A LICENSE AUTHORIZING OPERATION OF A UTILIZATION FACILITY WHO DESIRES TO MAKE A CHANGE IN TECHNICAL SPECIFICATION OR A CHANGE IN THE FACILITY AS DESCRIBED IN THE SAFETY ANALYSIS REPORT SHALL SUBMIT ON APPLICATION FOR AMENDMENT OF HIS LICENSE. CONTRARY TO THE ABOVE, AS OF DECEMBER 10, 1979, NO APPLICATION FOR AMENDMENT TO THE FACILITY LICENSE HAD BEEN MADE WHICH ADDRESSED CHANGES TO THE FACILITY TECHNICAL SPECIFICATION IN ORDER TO INCLUDE RADIOACTIVE EFFLUENT RELEASES FROM THE NEW RADWASTE BUILDING. THIS BUILDING, CONSTRUCTED AND PLACED INTO OPERATION BY THE LICENSEE CONSTITUTED A CHANGE IN THE FACILITY AS DESCRIBED IN THE SAFETY ANALYSIS REPORT. THE LICENSEE HAD SUBMITTED A SAFETY ANALYSIS REPORT PURSUANT TO 10 CFR 50.59(B) AND PROPOSED TECHNICAL SPECIFICATIONS FOR BUILDING SETTLEMENT IN SOIL. HOWEVER, SINCE INITIAL INTORDUCTION OF RADIOACTIVE MATERIAL INTO THIS BUILDING IN OCTOBER 1978 NO SUBMITTAL HAS BEEN MADE ADDRESSING THE ABOVE RELEASES.
(7923 INFRACTION)

10 CFR 71.3, "REQUIREMENT FOR LICENSE," REQUIRES THAT NO LICENSEE SUBJECT TO THE REGULATIONS IN THIS PART SHALL (A) DELIVER ANY LICENSED MATERIALS TO A CARRIER FOR TRANSPORT OR (B) TRANSPORT LICENSED MATERIAL EXCEPT AS AUTHORIZED IN A GENERAL LICENSE OR SPECIFIC LICENSE ISSUED BY THE COMMISSION, OR AS EXEMPTED IN THIS PART. CONTRARY TO THE ABOVE, ON DECEMBER 10, 1979, AND AT OTHER TIMES, SHIPMENTS OF LICENSED MATERIALS IN EXCESS OF A TYPE A QUANTITY WERE DELIVERED TO A CARRIER FOR TRANSPORT WITHOUT A GENERAL OR SPECIFIC LICENSE AND NO EXEMPTION IN 10 CFR 71 WAS APPLICABLE.
(7923 INFRACTION)

10 CFR 71.62, "RECORDS," REQUIRES IN PART THAT THE LICENSEE SHALL MAINTAIN FOR A PERIOD OF 2 YEARS AFTER ITS GENERATION, A RECORD OF EACH SHIPMENT OF MORE THAN A TYPE A QUANTITY OF RADIOACTIVE MATERIAL AS DEFINED IN 71.4(G), IN A SINGLE PACKAGE, SHOWING WHERE APPLICABLE, THE RESULTS OF THE DETERMINATIONS REQUIRED BY 71.54, "ROUTINE DETERMINATIONS." THESE DETERMINATIONS INCLUDE DETERMINATIONS THAT: (A) THE PACKAGING HAS NOT BEEN SIGNIFICANTLY DAMAGED...(C) THE CLOSURE OF THE PACKAGE AND ANY SEALING GASKETS ARE PRESENT AND ARE FREE FROM DEFECTS...AND (I) THE PACKAGE HAS BEEN LOADED AND CLOSED IN ACCORDANCE WITH WRITTEN PROCEDURES. ADDITIONALLY, 71.62 REQUIRES RECORDS TO BE MAINTAINED OF THE RESULTS OF DETERMINATION MADE PURSUANT TO 10 CFR 71.53 INCLUDING: DETERMINATIONS THAT THERE ARE NO CRACKS, VOIDS OR OTHER DEFECTS WHICH COULD REDUCE THE EFFECTIVENESS OF THE PACKAGING PRIOR TO ITS FIRST USE. CONTRARY TO THE ABOVE, THE FOLLOWING SHIPMENTS CONTAINED GREATER THAN A TYPE A QUANTITY OF RADIOACTIVE MATERIAL IN A SINGLE PACKAGE AND WERE SHIPPED FROM THE LICENSEE'S FACILITY WITHOUT RECORD OF THE ABOVE DETERMINATIONS BEING PERFORMED: 05 1018, 1025, 1009, 1073 (1979).
(7923 DEFICIENCY)

NON FLAME RETARDENT WOODEN CRATES STORED ON 119' LEVEL OF THE REACTOR BUILDING CONTRARY TO SECTION 5.1.12 OF PROCEDURE 120, FIRE HAZARDS, REVISION 5.
(7924 INFRACTION)

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 20.101(A) PLACES A LIMIT OF 1.25 REM PER CALENDAR QUARTER ON AN INDIVIDUAL'S OCCUPATIONAL DOSE TO THE WHOLE BODY. THE EXCEPTION PROVIDED FOR BY 10 CFR 20.101(B), WHICH PERMITS QUARTERLY WHOLE BODY DOSE FROM OCCUPATIONAL EXPOSURE UP TO 3 REM IF THE ACCUMULATED WHOLE BODY DOSE DOES NOT EXCEED 5 (N-18), DOES NOT APPLY TO EIGHTEEN-YEAR-OLD INDIVIDUALS, AS "N" IS DEFINED AS THE INDIVIDUAL'S AGE IN YEARS AT HIS LAST BIRTHDAY. CONTRARY TO THE ABOVE, THE LICENSEE REPORTED BY LETTER DATED OCTOBER 26, 1979, THAT AN EIGHTEEN-YEAR-OLD WORKER HAD RECEIVED 1.7 REMS DURING THE THIRD CALENDAR QUARTER OF 1979. THIS WHOLE BODY DOSE EXCEEDS THE APPLICABLE 1.25 REM LIMIT.
(7919 INFRACTION)

10 CFR 20.201(B) REQUIRES EACH LICENSEE TO MAKE OR CAUSE TO BE MADE SUCH SURVEYS AS MAY BE NECESSARY FOR HIM TO COMPLY WITH THE REGULATION IN THIS PART. 10 CFR 20.201(A) DEFINES A SURVEY AS USED IN THE REGULATIONS TO MEAN AN EVALUATION OF THE RADIATION HAZARDS INCIDENT TO THE PRODUCTION, USE, RELEASE, DISPOSAL, OR PRESENCE OF RADIOACTIVE MATERIALS OR OTHER SOURCES OF RADIATION UNDER A SPECIFIC SET OF CONDITIONS. WHEN APPROPRIATE, SUCH EVALUATION INCLUDES A PHYSICAL SURVEY OF THE LOCATION OF MATERIALS AND EQUIPMENT, AND MEASUREMENTS OF LEVELS OF RADIATION OR CONCENTRATIONS OF RADIOACTIVE MATERIAL PRESENT. CONTRARY TO THE ABOVE, THE LICENSEE FAILED TO MAKE A PROPER EVALUATION FOR THE PRESENCE OF RADIOACTIVE MATERIAL IN PLANT REFUSE BEING RELEASED TO A LANDFILL FOR BURIAL IN 1978 AND POSSIBLY IN EARLY 1979.
(7919 INFRACTION)

TECHNICAL SPECIFICATIONS 6.8.1 AND 6.11.1 REQUIRE THAT RADIATION PROTECTION PROCEDURES BE IMPLEMENTED AND ADHERED TO. PROCEDURE H.P. 8.4, "WHOLE BODY COUNTING PROGRAM," IN SECTION 5.2.1, "EXIT WHOLE BODY COUNTING," STATES, "ALL PERSONNEL, WHETHER PERMANENT OR TEMPORARY, WILL BE WHOLE BODY COUNTED AT THE TIME OF THEIR FILM BADGE TERMINATION UNLESS THE PLANT HEALTH PHYSICIST DEEMS A COUNT NOT NECESSARY BASED ON THE WORK PERFORMED AND THE AREA IT WAS PERFORMED IN BY THE INDIVIDUAL." CONTRARY TO THE ABOVE, A WORKER WHO HAD WORKED IN CONTAINMENT AND THE STEAM GENERATOR DURING THE EARLY PART OF THE CURRENT OUTAGE WAS NOT GIVEN A WHOLE BODY COUNT UPON HIS TERMINATION FOLLOWING WORK ON OCTOBER 8, 1979.
(7919 INFRACTION)

ENVIRONMENTAL TECHNICAL SPECIFICATION 3.9.8 REQUIRES THAT ALL DISCHARGES FROM THE PLANT INTO LAKE MICHIGAN BE LIMITED TO A RANGE OF 6.5 TO 9.5 PH UNITS. CONTRARY TO THE ABOVE, ON MARCH 21, 1979, WATER WAS DISCHARGED TO THE LAKE WITH A CALCULATED PH OF 5.2.
(7921 INFRACTION)

ENVIRONMENTAL TECHNICAL SPECIFICATION 3.9.9 REQUIRES THAT THERMAL DISCHARGES OF THE TOTAL BLOWDOWN FROM THE CLOSED-CYCLE COOLING SYSTEM MIXED WITH DILUTION WATER SHALL BE LIMITED TO AN INCREASE OF NO MORE THAN 5F DEGREES ABOVE THE AMBIENT TEMPERATURE OF THE RECEIVING WATER AT THE SHORELINE OF THE LAKE AND THAT HEAT REJECTION TO THE LAKE FROM THE DILUTED TOTAL BLOWDOWN SHALL NOT EXCEED 0.5 BILLION BRITISH THERMAL UNITS (BTU'S) PER HOUR. IF THESE LIMITS ARE EXCEEDED BY MORE THAN 20% FOR MORE THAN 12 HOURS, THE LICENSEE SHALL TAKE ACTION TO DETERMINE THE CAUSE AND MODIFY PLANT OPERATIONS TO RESOLVE THE PROBLEM. IF THESE LIMITS ARE EXCEEDED FOR ANY PERIOD OF MORE THAN 24 HOURS (AND UP TO 7 DAYS ON LOSS OF ONE DILUTION PUMP), THE LICENSEE SHALL REDUCE POWER ACCORDINGLY TO RESTORE COMPLIANCE WITH SPECIFICATIONS TO PROTECT THE AQUATIC BIOTA. CONTRARY TO THE ABOVE, ON DECEMBER 19, 1978, THERMAL DISCHARGES TO LAKE MICHIGAN GREATER THAN 6F DEGREES ABOVE THE AMBIENT TEMPERATURE EXISTED FOR A PERIOD OF MORE THAN 24 HOURS.
(7921 INFRACTION)

THE LICENSEE DID NOT CONDUCT PROPER PERSONNEL SCREENING IN ACCORDANCE WITH SECURITY PLAN COMMITMENTS.
(7923 INFRACTION)

THE LICENSEE FAILED TO PROVIDE POSITIVE CONTROL OF ACCESS TO THE PROTECTED AREA AT ONE ACCESS PORTAL.
(7923 DEFICIENCY)

PART OF PHYSICAL BARRIER TO PROTECTED AREA DID NOT OFFER PENETRATION RESISTANCE EQUAL TO THAT OF THE FENCE.
(7923 DEFICIENCY)

THE LICENSEE DOES NOT CONDUCT ADEQUATE SEARCHES IN ACCORDANCE WITH A SECURITY PROCEDURE COMMITMENT.
(7923 DEFICIENCY)

THE LICENSEE FAILED TO ADEQUATELY PROTECT ONE CENTRAL COMMUNICATION SYSTEM.
(7923 DEFICIENCY)

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENTS

- The plant commenced a scheduled 10-week refueling outage on September 8, 1979. (79-15)
- Cracking was discovered in feedlines to both steam generators during examinations pursuant to IE Bulletin 79-13. The licensee decided to replace an approximate 28-foot horizontal section to each generator during the refueling outage. (79-15)

PLANT STATUS

Reactor shutdown on September 10, 1979, to begin a 10-week scheduled refueling and maintenance outage. Start-up tentatively scheduled for late April 1980

- LAST IE SITE INSPECTION DATE: December 10-14, 1979
- INSPECTION REPORT NO: 79-23

SUMMARY

INSPECTION SUMMARY

- Inspection during September 1979, (79-15): Routine inspection by the assigned NRC Resident Inspector covering reportable events, IE Bulletins, Maintenance Department activities, procedures, and cleanliness. The inspection involved 95 inspector hours onsite. Of the five areas inspected, no items of noncompliance or deviations were identified in four areas. Three noncompliance items were identified in the remaining area (containment integrity violated; failure to adhere to required procedure; and failure to confirm condition of manual containment isolation valves after refueling outages).
- Inspection on November 8-9 and 14-16, (79-19): Routine, unannounced inspection of radiation protection program associated with the refueling outage, including: radiation protection procedures; advance planning and preparation; training; external exposure control; internal exposure control; ALARA; posting and control; radioactive and contaminated material control; surveys; IE Bulletin 78-08; IE Information Notice 79-08; audits; instruments and equipment; secondary system demineralizer resin; and IE Bulletin 79-19. The inspection involved 47.5 inspector hours onsite by one NRC inspector. Of the 15 areas inspected, one apparent item of noncompliance identified in the area of external exposure control involved the overexposure of an eighteen-year-old; one apparent item of noncompliance identified in the area of radiation protection procedures involved a failure to follow procedures; and one apparent item of noncompliance identified in the area of the secondary systems demineralizer resin involved failure to make proper evaluations for presence of radioactive material in plant refuse before release for burial.
- Inspection on December 10-14, (79-23): Included a review of Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization, and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys, and Combinations; Records and Reports; Followup on Previous Item of Noncompliance/Deviations; Followup on IE Bulletin No. 79-16, titled "Vital Area Access Controls." The inspection involved 93 inspector hours onsite by two NRC inspectors. The inspection began during the day shift period; 22 inspection hours were accomplished during offshift periods. The licensee was found to be in compliance with NRC requirements within the 20 areas examined during this inspection except for the following 5 items: Access Control (Identification, Authorization and Badging) - The licensee did not conduct proper personnel screening in accordance with security plan commitments. This is considered a repeat item of noncompliance; Access Control (Identification, Authorization and Badging) - The licensee failed to provide positive control of access to the protected area at one access portal; Access Control (Search) - The licensee does not conduct adequate searches in accordance with a security procedural commitment; Communications - The licensee failed to adequately protect one central communication system; and Physical Barriers (Protected Area) - A part of the perimeter barrier did not offer penetration resistance equal to that of the fence. The items of noncompliance from the previous security inspection 79-10, are closed with the exception of those concerning: (1) Background screening of personnel, (audit in progress) and (2) Tamper indication on the intrusion alarm system (submitted to NMSS for resolution).

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 3.14.B.3, "CO2 FIRE PROTECTION SYSTEMS" STATES, "THE DIESEL GENERATOR CO2 FIRE PROTECTION SHALL BE OPERABLE WHEN THE DIESEL GENERATORS ARE REQUIRED TO BE OPERABLE WITH THE SYSTEM COMPRISED OF: ...B. AN OPERABLE FLOW PATH TO EACH ROOM." TECHNICAL SPECIFICATION 3.14.13.4 STATES IN PART, "IF THE REQUIREMENTS OF 3.14.B.1, 2, OR 3 CANNOT BE MET, (A.) ESTABLISH A CONTINUOUS FIRE WATCH...FOR THE UNPROTECTED AREA (HPCI, CABLE SPREADING, COMPUTER, DIESEL GENERATOR) WITHIN ONE HOUR." CONTRARY TO THE ABOVE, ON AUGUST 21, 1979, WITH UNITS 2 AND 3 OPERATING IN THE RUN MODE AND DIESEL GENERATOR OPERABILITY REQUIRED PURSUANT TO TECHNICAL SPECIFICATIONS 3.9.A AND 3.9.B, AFTER PROPERLY ESTABLISHING A REQUIRED FIRE WATCH WHILE A PORTION OF THE DIESEL GENERATOR BUILDING FIRE PROTECTION SYSTEM WAS DISABLED TO PERMIT WORK IN THIS AREA, THE CONTINUOUS FIRE WATCH WAS NOT MAINTAINED IN THAT THE AREA WAS VACATED FOR AN INTERVAL OF TEN MINUTES AND THE SYSTEM WAS LEFT IN A DISARMED CONDITION. ADDITIONALLY, THESE REQUIREMENTS AS STATED IN THE LICENSEE'S "PROCEDURE FOR CONTROLLING FIREWATCH" WERE NOT ADHERED TO.
(7920 INFRACTION)

TECHNICAL SPECIFICATION 6.8.1 REQUIRES IN PART: "WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES SHALL BE ESTABLISHED, IMPLEMENTED, AND MAINTAINED...." HEALTH PHYSICS PROCEDURE HPO.CO-9C, REVISION 1, DATED DECEMBER 27, 1978, SECTION 9.0 "INVENTORY CONTROL AND PROGRAM EVALUATION" STATES IN PART, "THE LAUNDRY REPORT IS COMPLETED BY LAUNDRY PERSONNEL AND DELIVERED TO THE RESPIRATORY PROTECTION ADMINISTRATOR DAILY. THIS REPORT PROVIDES THE RESPIRATORY PROTECTION ADMINISTRATOR WITH AN INDICATION OF RESPIRATORS USED, CLEANED, REPAIRED, AND REJECTED AS WELL AS PARTS REPLACEMENT DATA TO BE USED IN PROGRAM EVALUATION." CONTRARY TO THE ABOVE, AS OF AUGUST 6, 1979, SAID REPORTS WERE BEING DELIVERED TO THE SUPERVISOR-RADIATION SUPPORT SERVICES INSTEAD OF TO THE RESPIRATORY PROTECTION ADMINISTRATOR AND NO DOCUMENTATION WAS AVAILABLE TO DEMONSTRATE PROGRAM EVALUATION.
(7920 DEFICIENCY)

10 CFR 2.790 - PHYSICAL BARRIERS - ACCESS CONTROLS.
(7920 INFRACTION)

10 CFR 50 APPENDIX B, CRITERION XVI, STATES IN PART: "MEASURES SHALL BE ESTABLISHED TO ENSURE THAT CONDITIONS ADVERSE TO QUALITY, SUCH AS FAILURES,...ARE PROMPTLY IDENTIFIED AND CORRECTED...." CONTRARY TO THE ABOVE, A CABLE TRAY PENETRATION (NOMENCLATURE Z02MV180), LOCATED IN THE UNIT 2 REACTOR BUILDING 135 FOOT ELEVATION WAS FOUND ON NOVEMBER 8,1979 TO HAVE A BROKEN SEAL WHICH COMPROMISED THE SEAL AND FIRE PROTECTION CAPABILITY. ADDITIONALLY, THE SEAL ENCLOSURE CONTAINED TRASH AND DEBRIS, CONSTITUTING A POTENTIAL FIRE HAZARD. THIS SEAL HAD LAST BEEN INSPECTED ON APRIL 23, 1979 AND NO MEASURES OR LICENSEE INSPECTION HAD IDENTIFIED AND CORRECTED THIS PENETRATION INADEQUACY.
(7929 INFRACTION)

TECHNICAL SPECIFICATION 6.1.1, "RADIATION PROTECTION PROGRAM," REQUIRES THAT PROCEDURES FOR PERSONNEL RADIATION PROTECTION SHALL BE PREPARED CONSISTENT WITH REQUIREMENTS OF 10 CFR PART 20 AND SHALL BE APPROVED, MAINTAINED, AND ADHERED TO FOR ALL OPERATIONS INVOLVING PERSONNEL EXPOSURE. HEALTH PHYSICS PROCEDURE HPO/CO-4, "RADIATION WORK PERMITS," REVISION 13, DATED MARCH 20, 1979, REQUIRES IN PART IN SECTION VI THAT ALL PERSONNEL WHO DESIRE TO ENTER THE AREA COVERED BY THE RWP SHALL READ AND BE FAMILIAR WITH THE DATA AND THE INSTRUCTIONS ON THE RWP, SIGN THEIR OWN NAME, AND PROVIDE NAME, DATE,...TIME IN, DOSIMETER READING,.... CONTRARY TO THE ABOVE REQUIREMENTS, ON NOVEMBER 8, 1979, ONE INDIVIDUAL FROM THE OPERATIONS STAFF ENTERED THE UNIT 3 165 FOOT ELEVATION TURBINE AND TURBINE HALL AREAS FOR AN INSPECTION WITHOUT SIGNING IN OR PROVIDING APPROPRIATE DATA REQUIRED BY RWP 3-I-5 GOVERNING SUCH INSPECTION ENTRIES. (RECURRENT ITEM)
(7929 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

FACILITY ITEMS (PLANS AND PROCEDURES):

- Refueling outage of 100 days will commence March 21, 1980.

MANAGERIAL ITEMS:

- The facility was toured by the President of INPO, E. P. Wilkinson, on February 8, 1980.

PLANT STATUS:

- The reactor operated at a nominal 100 percent during the month. Representative offgas and combined Unit 2 and Unit 3 stack gas release rates were 7690 microcuries per second and 692 microcuries per second, respectively.

- LAST IE SITE INSPECTION DATE: 2/29/80

- INSPECTION REPORT NO: 50-277/80-03

SUMMARY

INSPECTION SUMMARY

- 50-277/79-29 - Nov 1-30: Routine, onsite and corporate office regular and backshift inspections by the resident inspector (45 hours). Areas inspected included accessible portions of the facility, radiation protection, maintenance activities, physical security, plant operations, facility tours, control room inspections, housekeeping, LER review onsite and in-office, followup on previously identified items, review of periodic and special reports, and IE Bulletin followup. Noncompliances: two (failure to adhere to Radiation Work Permit (RWP) requirements; and, failure to maintain a fire and penetration seal barrier).

- 50-277/80-02 - Jan 8-11, 16: Routine, unannounced inspection of the Fire Protection/Prevention Program including: assignment of functional responsibilities; implementation of administrative controls; fire brigade training; observation of ignition source and combustible materials control; observation of fire protection systems and components; observation of plant modifications; review of surveillance test records associated with the fire protection program; and observation of critical fire areas. (32 hours) Noncompliances: One (failure to follow procedure for installation of fire stops).

TECHNICAL SPECIFICATION 6.8.1 REQUIRES IN PART: "WRITTEN PROCEDURES AND ADMINISTRATIVE POLICIES SHALL BE ESTABLISHED, IMPLEMENTED, AND MAINTAINED...." HEALTH PHYSICS PROCEDURE HPO/CO-9C, REVISION 1, DATED DECEMBER 27, 1978, SECTION 9.0 "INVENTORY CONTROL AND PROGRAM EVALUATION" STATES IN PART, "THE LAUNDRY REPORT IS COMPLETED BY LAUNDRY PERSONNEL AND DELIVERED TO THE RESPIRATORY PROTECTION ADMINISTRATOR DAILY. THIS REPORT PROVIDES THE RESPIRATORY PROTECTION ADMINISTRATOR WITH AN INDICATION OF RESPIRATORS USED, CLEANED, REPAIRED, AND REJECTED AS WELL AS PARTS REPLACEMENT DATA TO BE USED IN PROGRAM EVALUATION." CONTRARY TO THE ABOVE, AS OF AUGUST 6, 1979, SAID REPORTS WERE BEING DELIVERED TO THE SUPERVISOR-RADIATION SUPPORT SERVICES INSTEAD OF TO THE RESPIRATORY PROTECTION ADMINISTRATOR AND NO DOCUMENTATION WAS AVAILABLE TO DEMONSTRATE PROGRAM EVALUATION.
(7922 DEFICIENCY)

TECHNICAL SPECIFICATION 6.1.1, "RADIATION PROTECTION PROGRAM," REQUIRES THAT PROCEDURES FOR PERSONNEL RADIATION PROTECTION SHALL BE PREPARED CONSISTENT WITH REQUIREMENTS OF 10 CFR PART 20 AND SHALL BE APPROVED, MAINTAINED, AND ADHERED TO FOR ALL OPERATIONS INVOLVING PERSONNEL EXPOSURE. HEALTH PHYSICS PROCEDURE HPO/CO-4, "RADIATION WORK PERMITS," REVISION 13, DATED MARCH 20, 1979, REQUIRES IN PART IN SECTION VI THAT ALL PERSONNEL WHO DESIRE TO ENTER THE AREA COVERED BY THE RWP SHALL READ AND BE FAMILIAR WITH THE DATA AND THE INSTRUCTIONS ON THE RWP, SIGN THEIR OWN NAME, AND PROVIDE NAME, DATE....TIME IN, DOSIMETER READING..... CONTRARY TO THE ABOVE REQUIREMENT, ON NOVEMBER 8, 1979, ONE INDIVIDUAL FROM THE OPERATIONS STAFF ENTERED THE UNIT 3 165 FOOT ELEVATION TURBINE AND TURBINE HALL AREAS FOR AN INSPECTION WITHOUT SIGNING IN OR PROVIDING APPROPRIATE DATA REQUIRED BY RWP 3-I-5 GOVERNING SUCH INSPECTION ENTRIES. (RECURRENT ITEM).
(7932 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- A recombiner hydrogen analyzer leaked while being placed in service on 2/15, resulting in an unplanned release of 1.3 curies via the reactor building ventilation system. The maximum release rate was one-third of the allowable Tech Specs limit. The analyzer was isolated, repaired and returned to service the same day.

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
80-001/ 03L	01/06/80	02/05/80	30 Day LER	Main steam line radiation monitor "D" loss of trip function discovered during routine surveillance
80-002/ 03L	01/18/80	02/15/80	30 Day LER	One traversing incore probe (TIP) "in shield" limit switch was out of calibration such that in the event of a PCIS signal the ball valve would not isolate the Tip tube
80-003/ 01T	01/19/80	02/01/80	24 Hour	Unit 2 and 3 offgas rad monitors out of service

MANAGERIAL ITEMS:

- The facility was toured by the President of INPO, E. P. Wilkinson, on February 8, 1980.

PLANT STATUS:

- Unit was online 2/6 following an eight day outage. The reactor was operated at a nominal 100 percent power. Representative offgas and combined Unit 2 and Unit 3 stack gas release rates were 3710 microcuries per second and 692 microcuries per second, respectively.

- LAST IE SITE INSPECTION DATE: 2/29/80

- INSPECTION REPORT NO: 50-278/80-03

SUMMARY

INSPECTION SUMMARY

- 50-278/79-32 - Nov 1-30: Routine, onsite and corporate office regular and backshift inspections by the resident inspector (46 hours). Areas inspected included system restoration from a refueling outage, startup, shutdown margin testing, accessible portions of the Unit 2 and Unit 3 facilities, radiation protection, maintenance activities, physical security, plant operations, facility tours, control room inspections, housekeeping, LER review onsite and in-office, followup on previously identified items, review of periodic and special reports, and IE Bulletin followup. Noncompliances: Two (failure to adhere to Radiation Work Permit (RWP) requirements; and, failure to maintain a fire and penetration seal barrier).

- 50-278/80-02 - Jan 8-11, 16: Routine, unannounced inspection of the Fire Protection/Prevention Program including: assignment of functional responsibilities; implementation of administrative controls; fire brigade training; observation of ignition source and combustible materials control; observation of fire protection systems and components; observation of plant modifications; review of surveillance test records associated with the fire protection program; and observation of critical fire areas. (32 hours) Noncompliances: One (failure to follow procedure for installation of fire-stops).

SUMMARY

INSPECTION SUMMARY

♦ 50-293/79-07 - Oct 9-10: Special, unannounced inspection by two region-based inspectors (17 hr. onsite) of the licensee's radiation protection program during operations. Areas inspected included training, surveys, posting and control, and facility tours. No noncompliances were observed.

♦ 50-293/79-23 - Dec 27-28 & Jan 4: Special unannounced inspection by two region-based inspectors of the licensee's discrepant radioactive waste shipment to Barnwell, S.C. on December 14, 1979 including: records of shipments, review of procedures, chronology of events, and regulatory requirements. One item of noncompliance was identified (failure to comply with 40 CFR 183.393(j)(3)).

♦ 50-293/80-04 - Jan 28-31: Routine, unannounced inspection by one region-based and one resident inspector of ISI implementation, Snubber Program, the Containment Integrated Leak Rate Test Procedure and plant tours. The inspection involved 64 hours onsite. No items of noncompliance were identified.

OTHER ITEMS OF INTEREST

PLANT STATUS

+ The Unit operated at approximately 77% power this month. This power level is about the maximum obtainable due to reduced primary temperature and pressure limits. Per the conditions of the order modifying the conditions of the license, Unit 1 was taken off line for inservice inspection of the steam generator tubes on February 28, 1980.

\+LAST IE SITE INSPECTION DATE: December 11-12, 1979

+ INSPECTION REPORT NO: 79-20

SUMMARY

INSPECTION SUMMARY

+ Inspection on October 11; November 14-15; December 17-19, 1979 and January 7-8, 1980, (79-14): QA/QC program, implementing procedures, observation of work activities, and review and evaluation of nondestructive examination (NDE) data and reports of inservice inspection (ISI); IE Bulletin 79-13 and IE Bulletin 79-17 activities; and steam generator repair. The inspection involved 25 inspector hours onsite and five hours at southwest Research Institute by one NRC inspector. No items of noncompliance or deviations were identified.

+ Inspection on December 4-7, 14-15 and 18, (79-19): Routine, unannounced inspection on December 4-7 to review plant operations, procedures, bulletin follow-up, non-routine event follow-up and independent inspection. Announced inspection on December 14-15 and 18 for non-routine event follow-up. The inspection involved 41 inspector hours onsite by one NRC inspector. Of the four areas inspected, no items of noncompliance were identified.

+ Inspection on December 11-12, (79-20): Nonroutine, announced inspection of licensee actions taken in response to IE Bulletin 79-19, "Packaging of Low-Level Radioactive Waste for Transport and Burial." The inspection involved 13 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

UNIT SHUTDOWNS/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
1	02/28/80	F	45.6	A	1	80-002	CB	HTEXCH	SHUTDOWN OF THE UNIT ON FEBRUARY 28, 1980, FOLLOWING CONFIRMATION OF PRIMARY-TO-SECONDARY LEAKAGE OF 1,420 GALLONS PER DAY IN THE "A" STEAM GENERATOR. A STATIC HEAD LEAK CHECK IDENTIFIED THE DEFECTIVE TUBE AND SUBSEQUENT EDDY CURRENT INSPECTION PLACED THE DEFECT AT 10" ABOVE THE TUBE END ON THE HOT LEG SIDE.

SUMMARY

OPERATION WAS ROUTINE DURING THE REPORT PERIOD, WITH AN END-OF-CYCLE COASTDOWN BEGINNING 02/20/80. ON 02/28/80, THE UNIT WAS SHUTDOWN DUE TO PRIMARY-TO-SECONDARY **LEAKAGE OF 1,420 GALLONS/DAY IN THE "A" STEAM** GENERATOR. PREVIOUSLY SCHEDULED REFUELING AND EDDY CURRENT INSPECTION HAVE BEEN INCLUDED IN THIS OUTAGE. BRIEF LOAD REDUCTIONS OCCURRED ON 02/10/80 FOR TURBINE STOP VALVE TESTING, AND ON 02/21/80 BECAUSE OF TURBINE RUNBACK CAUSED BY A MOMENTARY LOSS OF POWER ON THE REAL INSTRUMENT BUS.

+LAST IE SITE INSPECTION DATE: January 8-10, 1980

+ INSPECTION REPORT NO: 80-02

SUMMARY

INSPECTION SUMMARY

- Inspection on October 6-10 and January 3, 1980, (79-25): QA/QC programs, implementing procedures, work activities, and records relative to steam generator tube inspections. The inspection involved 46 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.
- Inspection on December 1-31, (79-30): Routine resident inspection of plant operations, maintenance, security, review and audit, calibration, radiation protection, radioactive waste system, followup of IE bulletins and circulars. The inspection involved 71 inspector hours onsite by the resident inspector. No items of noncompliance or deviations were identified.
- Inspection on December 19-21, (79-32): Routine, announced inspection of confirmatory measurements for Unit 1, including the licensee's program for quality control of analytical measurements; evaluation of the licensee's analytical results of plant effluent samples obtained during a previous inspection; collection of plant effluent samples for future comparative analysis; and submission of a spiked particulate filter, charcoal adsorber and liquid sample for future comparative analyses; and environmental protection, including administrative and procedural control system; quality assurance and control in analytical measurements; implementation of the radiological environmental monitoring program (REMP); review of Environmental Event Reports (EER), and licensee actions on previously identified matters. Of the 10 areas inspected, no apparent items of noncompliance or deviations were identified in nine areas; one apparent item of noncompliance was identified in one area (neutralizing tank batch release with pH greater than 8.5).
- Inspection on January 8-10, (80-02): Routine, unannounced inspection of the radiation protection program for operating and refueling, including: qualifications; licensee audits; training; radiation protection procedures; advance planning and preparation for refueling; instruments and equipment; exposure control; posting, labeling, and control; notification and reports; IE Bulletin 79-19; and surveys. The inspection involved 25 inspector hours onsite by one NRC inspector. Of the 11 areas inspected, no items of noncompliance or deviations were identified.

+LAST IE SITE INSPECTION DATE: January 15-18, 1980

+ INSPECTION REPORT NO: 80-03

SUMMARY

INSPECTION SUMMARY

+ Inspection on December 1-31, (79-24): Routine resident inspection of plant operations, maintenance, security, review and audit, calibration, radiation protection, radioactive waste system, followup of IE bulletins and circulars, preparation for Unit 2 refueling, inspection of new fuel for Unit 2, and core performance. The inspection involved 71 inspector hours onsite by the resident inspector. No items of noncompliance or deviations were identified.

+ Inspection on December 19-21, (79-26): Routine, announced inspection of confirmatory measurements for Unit 2, including the licensee's program for quality control of analytical measurements; evaluation of the licensee's analytical results of plant effluent samples obtained during a previous inspection; collection of plant effluent samples for future comparative analysis; and submission of a spiked particulate filter, charcoal adsorber and liquid sample for future comparative analyses; and environmental protection, including administrative and procedural control system; quality assurance and control in analytical measurements; implementation of the radiological environmental monitoring program (REMP); review of Environmental Event Reports (EER), and licensee actions on previously identified matters. Of the 10 areas inspected, no apparent items of noncompliance or deviations were identified in nine areas; one apparent item of noncompliance was identified in one area (neutralizing tank batch release with pH greater than 8.5).

+ Inspection on January 8-10, (80-02): Routine, unannounced inspection of the radiation protection program for operating and refueling, including: qualifications; licensee audits; training; radiation protection procedures; advance planning and preparation for refueling; instruments and equipment; exposure control; posting, labeling, and control; notification and reports; IE Bulletin 79-19; and surveys. The inspection involved 25 inspector hours onsite by one NRC inspector. Of the 11 areas inspected, no items of noncompliance or deviations were identified.

+ Inspection on January 15-18, (80-03): Inservice Inspection (ISI) program, implementing procedures, observation of work activities, and review and evaluation of nondestructive examinations (NDE) data and reports of ISI; review and evaluation of radiographic examination results related to IE Bulletin 79-13; review of data reports of (NDE) examination related to IE Bulletin 79-17. The inspection involved 21 inspector hours onsite by one NRC inspector. Of the six areas inspected, no apparent items of noncompliance were identified in five areas; one apparent item of noncompliance was identified in one area (failure to follow NDE procedures).

FACILITY ITEMS

+ During the last two calendar quarters of 1979, the gaseous effluent release rate of radioiodine and radioactive particulates with half-lives greater than eight days has remained at or below the design objective for the site after exceeding twice the design objective release rate for each of the preceeding four calendar quarters. (79-30)

PLANT STATUS

Unit operating routinely.

+LAST IE SITE INSPECTION DATE: January 10, 1980

+ INSPECTION REPORT NO: 80-02

SUMMARY

INSPECTION SUMMARY

+ Inspection on December 11-14, (79-30): Nonroutine, announced inspection to review, since mid-year, the licensee's data, reports, and experience in meeting the design objective gaseous release rate for radioiodine and radioactive materials in particulate form with half-lives greater than eight days. The inspection involved 12 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified in the area reviewed.

+ Inspection on December 5, 1979 through January 14, 1980, (79-31): Investigation was conducted into the circumstances surrounding the closure of two core spray suction valves to the Quad-Cities Unit 1 Emergency Core Cooling System (ECCS). Investigation involved a review of procedures and records, interviews with plant personnel and discussions with the licensee and representatives of the Rock Island Office, Federal Bureau of Investigation (FBI). The investigation involved 80 inspector hours onsite by one inspector and one investigator. Investigation established on December 3, 1979 at 2400 hours, licensee discovered that two independently controlled core spray suction valves in the Unit 1 ECCS were found in a closed position. Interviews with plant personnel, and a review of maintenance and operations records indicated that there was no immediately discernable cause for the closure; both intentional and accidental manipulations of two valves were considered, but no positive conclusion was reached. No items of noncompliance were identified during the course of this investigation.

+ Inspection on January 10, (80-02): A special announced meeting was conducted to discuss iodine and particulate releases at Quad-Cities Nuclear Power Station; recent personnel errors at Quad-Cities Nuclear Power Station; Investigation of ECCS valve closure at Quad-Cities Nuclear Power Station; unplanned release of radioactive liquid effluent at Quad-Cities Nuclear Power Station. The meeting involved 12 inspector hours at the corporate office by six NRC personnel.

1.	Location (state/county) (nearest population center)	Illinois/Rock Island 20 miles NE of Moline
2.	Electric Reliability Council	Main
3.	Type of Reactor	BWR
4.	Power Level (MWT)	2511
5.	Design Electrical Rating (MWE Net)	789
6.	Date of Initial Criticality	April 26, 1972
7.	Date of Commercial Operation	March 10, 1973
8.	Condenser Cooling Method	Spray Canal
9.	Condenser Cooling Water Source	Mississippi River

Utility & Contractor Information

10.	Licensee	Commonwealth Edison Co.
11.	Corporate Address	P. O. Box 767 Chicago, Illinois 60690
12.	Corporate Contact	D. L. Peoples
13.	Architect/Engineer	Sargent & Lundy
14.	Nuclear Steam Supply System	GE
15.	Constructor	United Engineers & Constructors, Inc.

Regulatory Information

16.	IE Region responsible	III
17.	IE Branch Chief	R. Heishman
18.	IE Senior Inspector	R. Spessard
19.	IE Resident Inspector	N. J. Chrissotimus (309) 654-2227
20.	Licensing Project Manager	R. B. Bevan
21.	Docket Number	50-265
22.	License Number/Date of Issue	DPR-30 issued 3/21/72
23.	Public Document Room	Moline Public Library 504 17th Street Moline, Illinois 61265

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 3.8.D.1 STATES, "RADIOACTIVE LIQUIDS RELEASED FROM THE FACILITY SHALL BE CONTINUOUSLY MONITORED. TO ACCOMPLISH THIS, EITHER THE RADIATION MONITOR ON THE DISCHARGE LINE, OR THE DISCHARGE BAY SAMPLER SHALL BE OPERABLE OR GRAB SAMPLES SHALL BE TAKEN IN THE DISCHARGE BAY DURING THE COURSE OF THE DISCHARGE." CONTRARY TO THIS REQUIREMENT, THE UNPLANNED RADIOACTIVE LIQUID RELEASE WHICH BEGAN ABOUT 10:00 A.M. ON DECEMBER 9, 1979, WHILE DRAINING THE 2B RHR HEAT EXCHANGER VIA THE INSTRUMENT MANIFOLD WAS NOT CONTINUOUSLY MONITORED. (7927 INFRACTION)

TECHNICAL SPECIFICATION 6.2.A REQUIRES THAT DETAILED WRITTEN PROCEDURES INCLUDING APPLICABLE CHECKOFF LISTS BE PREPARED, APPROVED AND ADHERED TO FOR PREVENTIVE AND CORRECTIVE MAINTENANCE OPERATIONS WHICH COULD HAVE AN EFFECT ON THE SAFETY OF THE FACILITY. CONTRARY TO THE ABOVE, ON DECEMBER 9, 1979 TEMPORARY PROCEDURE 1261, "DRAINING UNIT 2 RHR SERVICE WATER PIPING," WAS NOT ADHERED TO IN THREE INSTANCES AS DELINEATED BELOW, RESULTING IN AN UNPLANNED RADIOACTIVE LIQUID EFFLUENT RELEASE TO THE MISSISSIPPI RIVER AS WELL AS RADIOACTIVELY CONTAMINATING A SMALL PORTION OF THE SITE GROUNDS AND THE STORM DRAINAGE SYSTEM. (A) THE PROCEDURE REQUIRED A HOSE BE CONNECTED TO ONE SPECIFIED INSTRUMENT LINE, WHEREAS THE HOSE WAS CONNECTED TO THE INSTRUMENT MANIFOLD; (B) THE PROCEDURE REQUIRED DRAINING THE SERVICE WATER SIDE OF THE RHR HEAT EXCHANGER BY OPENING ONE SPECIFIED INSTRUMENT LINE, WHEREAS, ALL INSTRUMENT LINES CONNECTED TO THE MANIFOLD WERE OPENED; AND (C) THE PROCEDURE REQUIRED A HOSE BE EXTENDED FROM THE OUTSIDE OF THE REACTOR BUILDING TO THE STORM SEWER, WHEREAS, NO SUCH CONNECTION WAS MADE. (7927 INFRACTION)

TECHNICAL SPECIFICATION 6.2.B REQUIRES THAT RADIATION CONTROL PROCEDURES BE MAINTAINED AND ADHERED TO. RADIATION CONTROL PROCEDURE QRP 100-1 TITLED, "RADIATION CONTROL STANDARDS" STATES IN PARAGRAPH F.16.A.2., "EXCEPT AS NOTED, A SPECIAL WORK PERMIT (SWP) WILL BE REQUIRED WHEN PERSONNEL MAY, OR ARE EXPECTED TO, EXCEED A DAILY WHOLE BODY DOSE OF 50 MILLIREMS. IF, HOWEVER, A RADIATION PROTECTION MAN IS IN CONTINUOUS ATTENDANCE AT THE JOB SITE WHILE A JOB IS IN PROGRESS, HE MAY AUTHORIZE A DAILY WHOLE BODY DOSE OF UP TO 100 MILLIREM PER DAY WITHOUT REQUIRING AN SWP." CONTRARY TO THE ABOVE, TWO WORKERS EACH RECEIVED GREATER THAN 50 MREM DOSE (75 MREM AND 130 MREM) ON DECEMBER 9, 1979, WHILE PERFORMING WORK ASSIGNMENTS AT THE INSTRUMENT MANIFOLD NEAR THE 2B RHR HEAT EXCHANGER AND OTHER LOCATIONS WITHOUT AUTHORIZATION PROVIDED BY AN SWP OR CONTINUOUS H.P. SURVEILLANCE. (7927 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

FACILITY ITEMS

+ During the last two calendar quarters of 1979, the gaseous effluent release rate of radioiodine and radioactive particulates with half-lives greater than eight days has remained at or below the design objective for the site after exceeding twice the design objective release rate for each of the preceeding four calendar quarters. (79-28)

PLANT STATUS

+ The unit was shut down on November 25, 1979 to begin a scheduled 13-week refueling and maintenance outage. The outage work is nearing completion, and the unit is scheduled for return to service about March 15, 1980.

+LAST IE SITE INSPECTION DATE: January 9-11, 1980

+ INSPECTION REPORT NO: 80-03

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
80-01/ 03L-0	01/08/80	02/07/80	30 Day LER	SBLC relief valve actuated in excess of setpoint.
80-02/ 03L-0	01/08/80	02/07/80	30 Day LER	Air leakage of RHR service water pump vault electrical penetration.

SUMMARY

INSPECTION SUMMARY

+ Inspection on December 11-14, (79-27): Special, inspection of unplanned radiological effluent release. The inspection involved 39 inspector hours onsite by two NRC inspectors. Three items of noncompliance (failure to follow a temporary procedure; failure to follow a radiation control procedure; and failure to continuously monitor an unplanned radioactive liquid release from the facility) were identified.

+ Inspection on December 11-14, (79-28): Nonroutine, announced inspection to review, since mid-year, the licensee's data, reports, and experience in meeting the design objective gaseous release rate for radioiodine and radioactive materials in particulate form with half-lives greater than eight days. The inspection involved 12 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified in the area reviewed.

+ Inspection on January 9-11, (80-03): Facility Organizations and Operation, Measurement and Control, Inventory, Shipping and Receiving, Records and Reports, Internal Controls and Management of Material Control System. The inspection involved 38 inspector hours onsite by two NRC inspectors and was begun during the regular hours. The licensee was found to be in compliance with NRC requirements in the seven areas examined during the inspections except for the following one item: licensee failed to prepare NRC Form 741 for transfer of SNM between lcoations assigned different Reporting Identification Symbols (RIS).

+ Inspection on January 18, (80-04): A special announced meeting was conducted to discuss iodine and particulate releases at Quad-Cities Nuclear Power Station; recent personnel errors at Quad-Cities Nuclear Power Station; investigation of ECCS valve closure at Quad-Cities Nuclear Power Station; unplanned release of radioactive liquid effluent at Quad-Cities Nuclear Power Station. The meeting involved 12 inspector hours at the corporate office by six NRC personnel.

LAST IE SITE INSPECTION DATE: 02/01-29/80+

INSPECTION REPORT NO. 50-312/80-06+

SUMMARY

INSPECTION SUMMARY

+ Inspection on December 13, 1979 (Report No. 50-312/79-29)
Areas Inspected: This inspection involved the examination of a shipment of low level radioactive waste for disposal. The shipment was inspected for compliance with NRC and DOT regulations. This inspection required one hour on site by one NRC inspector.

Results: No items of noncompliance were identified relative to NRC and DOT regulations.

+ Inspection on January 18-25, 1980 (Report No. 50-312/80-01)
Report being prepared; to be reported next month.

+ Inspection on January 21-25, 1980 (Report No. 50-312/80-02)
Areas Inspected: Refueling preparations including radiation safety procedures; radiation safety training; personnel monitoring and exposure control; respiratory protection program; instrument calibration; surveys; followup of reported unusual events; licensee action on IE Bulletin 79-19; allegation of possible problems with shipments of liquid radioactive waste; and a tour of the facility. The inspection involved 37 hours on site by one NRC inspector.

Results: Of the ten areas inspected, no items of noncompliance or deviations were identified in nine areas. One item of noncompliance was found in one area (Deficiency - Total chlorine concentration in plant effluent exceeded limit).

+ Inspection on January 2-31, 1980 (Report No. 50-312/80-03)
Areas Inspected: Routine inspections of plant operations; physical security; implementation of strike plan; refueling preparations; LER followup and reporting; followup on inspector identified items; and independent inspection effort. The inspection involved 114 inspector hours by the NRC Resident Inspectors and 24 inspector hours by one NRC Region 5 based inspector.

Results: No items of noncompliance or deviations were identified in six areas. One item of noncompliance was identified in one area (LER followup and reporting).

NRC POWER RESTRICTIONS: None

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-24-L	01-09-80	01-25-80	30 Day LER	NSRW not available to MU pump when in standby for HPI pump.
80-03-L	01-09-80	02-06-80	30 Day LER	SF valve 23508 (MU TK isol) without power for 42 hours.
80-04-L	01-10-80	02-11-80	30 Day LER	RCS leakage exceeded TS limit of 1 gpm-leaking gland on spray valve.
80-05-L	01-17-80	02-14-80	30 Day LER	Leakage from DHR pump (P-216A) exceeded TS limit of .63 GPH.
80-06-T	02-04-80	02-04-80	14 Day LER	Bolt in anchor valves may be incompatible with valve components.
80-06-T	02-04-80	02-18-80	14 Day LER	Stud failure in anchor valve.

+ Inspection on February 12-15, 1980 (Report No. 50-312/80-04)
Report being prepared; to be reported next month.

+ Inspection on January 30, February 1, 12-15 and 17-18, 1980 (Report No. 50-312/80-05)
Areas Inspected: Routine, unannounced inspection by Regional based inspector of the licensee's activities performed in response to IE Bulletin 79-02, "Pipe Support Base Plate Design Using Concrete Expansion Anchor Bolts" and of licensee's activities performed for the inservice inspection for the 1980 refueling outage. The inspection involved 67 inspector hours on site by one NRC inspector.

Results: No items of noncompliance or deviations were identified.

+ Inspection on February 1-29, 1980 (Report No. 50-312/80-06)
Report being prepared; to be reported next month.

+ LAST IE SITE INSPECTION DATE: FEBRUARY 4-6, 1980

+ INSPECTION REPORT NO: 50-261/80-03

SUMMARY

INSPECTION SUMMARY

+ INSPECTION FEBRUARY 4-7 (80-01): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 34 INSPECTOR-HOURS ON SITE IN THE AREAS OF QUALITY CONTROL AND CONFIRMATORY MEASUREMENTS: INCLUDING REVIEW OF THE LABORATORY QUALITY CONTROL PROGRAM: AUDIT RESULTS; REVIEW OF CHEMICAL AND RADIOCHEMICAL PROCEDURES; AND COMPARISON OF THE ANALYSES OF SPLIT SAMPLES ANALYZED BY THE LICENSEE AND THE NRC REGION II MOBILE LABORATORY. OF THE FOUR AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN THREE AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO HAVE AND FOLLOW WRITTEN APPROVED PROCEDURES FOR RADIOCHEMICAL MEASUREMENTS).

INSPECTION JANUARY 23-25 (80-02): INCLUDED REVIEW OF SECURITY ORGANIZATION; PROTECTED AREA BARRIER; VITAL AREA ALARMS AND ALARM STATIONS; ACCESS CONTROLS; DETECTION AIDS; AND ASSESSMENT AIDS. THE INSPECTION INVOLVED 30 INSPECTOR-HOURS ON SITE BY TWO NRC INSPECTORS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE SIX AREAS EXAMINED DURING THE INSPECTION EXCEPT FOR THE FOLLOWING TWO ITEMS: (1) FAILURE TO SEARCH VISITORS; AND (2) FAILURE TO MAINTAIN INTEGRITY OF THE PROTECTED AREA BARRIER.

INSPECTION FEBRUARY 4-6 (80-03): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 34 INSPECTOR-HOURS ON SITE IN THE AREAS OF RADIATION PROTECTION INCLUDING GENERAL EMPLOYEE TRAINING AND POSTING, LABELING AND CONTROL OF RADIOACTIVE MATERIALS; REVIEW OF LICENSEE ACTION ON IE BULLETIN 79-19; AND FOLLOWUP ON PREVIOUSLY IDENTIFIED ITEMS. OF THE FOUR AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; TWO ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (DEFICIENCY - FAILURE TO PROPERLY LABEL CONTAINERS OF RADIOACTIVE MATERIAL; AND INFRACTION - FAILURE TO FOLLOW PROCEDURES).

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- Leakage from the spent fuel pool liner of between 500-1000 cc/hr. Repairs are in progress on the suspected leak area.

PLANT STATUS:

Routine normal operations.

- LAST IE SITE INSPECTION DATE: 3/12/80
- INSPECTION REPORT NO: 50-272/80-08

SUMMARY

INSPECTION SUMMARY

- 50-272/79-32 - Nov 18 - Dec 15, 1979 & Jan 9, 1980: Routine inspections by the resident inspector of plant operations including: tours of the facility; log and record reviews; review of licensee events; IE Bulletins and Circulars; implementation of licensing commitments; and, followup on previous inspection items. The inspections involved 49 hours by the NRC resident inspector and 6 hours by one region-based inspector. Noncompliances: One (failure to follow procedures).
- 50-272/79-33 - Dec 16, 1979 - Feb 2, 1980: Routine inspections by the NRC resident inspector (40 hours) of plant operations including: tours of the facility; log and record reviews; review of licensee events; IE Bulletins; Immediate Action Letter followup; observations in the control room; and followup on previous inspection items. Noncompliances: None. Deviation: One (change made to the facility as described in the FSAR).
- 50-272/80-01 - Jan 22-25: Routine, unannounced inspection by a region-based inspector (29 hours) of licensee action on previous inspections findings; administrative control of safety related calibrations; surveillance calibrations of safety related components and equipment required by Technical Specifications; calibrations required by Technical Specifications of components and equipment association with safety related systems and/or functions; calibration and control of test equipment; witnessing of calibrations; technician qualifications; and facility tour. Noncompliances: One (failure to properly review calibration data).

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-073/ 04L	12/07/79	01/03/80	30 Day LER	Failure to continuously monitor liquid release from #11 monitor tank due to failed liquid release monitor channel
79-074/ 03L	12/25/79	01/24/80	30 Day LER	During startup operations the containment sump level monitoring system was declared inoperable due to a failure of the alarm typewriter circuit
79-076/ 03L	12/20/79	01/15/80	30 Day LER	Due to personnel error #12 CVCS holdup tank was overpressurized resulting in deformation to the tank
79-077/ 03L	12/24/79	02/22/80	30 Day LER	During startup #11 ASD breaker tripped due to fault in the logic circuit causing 1A set to be inoperable
79-078/ 03L	12/26/79	01/24/80	30 Day LER	Due to inproper closing sequence of the high speed breakers the #12 containment fan would not start in high speed
79-079/ 03L	12/30/79	01/31/80	30 Day LER	Failure of the level indicating circuit on the RWST resulted in a level decrease below technical specification limits
79-080/ 03L	12/27/79	01/31/80	30 Day LER	During normal startup, the 1E 4KV bus was lost, which resulted in loss of one RCP
79-081/ 04L	08/23/79	12/18/79	Environmental Deviation	During normal river trawling an Atlantic Loggerhead Turtle was captured and released unharmed. The Loggerhead Turtle in on the Endangered Species List
80-001/ 03L	01/01/80	01/24/80	30 Day LER	Due to failure of a signal isolator the target band for axial flux difference was exceeded
80-002/ 03L	01/17/80	02/05/80	30 Day LER	Failure to perform a functional test of power range low trip setpoint when greater than 25 percent power
80-004/ 03L	01/14/80	02/14/80	30 Day LER	With the plant in hot standby a low recirc flow indication was received on the boron injection tank. Cause was attributed to a clogged flow meter
80-005/ 03L	01/17/80	02/11/80	30 Day LER	During power operations containment pressure rose above TS limits
80-006/ 03L	01/23/80	02/21/80	30 Day LER	The meterological tower instrumentation was inoperable momentarily due to a power failure
80-007/ 01T	01/28/80	02/11/80	24 Hours	A check valve presently installed in the demineralized water supply to the auxiliary feedwater storage tanks is not in conformance with design requirements
80-008/ 03L	01/29/80	02/15/80	30 Day LER	During maintenance activities performed on 1VC6 containment pressure vacuum relief valve it was discovered that replacement parts were not qualified
80-009/ 03L	01/17/80	02/14/80	30 Day LER	During a routine inspection of the spent fuel pit, a small leak (approximately 1.9 gph) was discovered at a tell tale drain

PLANT STATUS:

Plant operating at 100% power.

LAST IE SITE INSPECTION DATE: 01/28-02/07/80

INSPECTION REPORT NO: 50-206/80-03

SUMMARY

INSPECTION SUMMARY

- Inspection on January 7-11, 1980 (Report No. 50-206/80-01)
  Areas Inspected: Included review of: Security organization; protected area physical barriers; vital area physical barriers; lighting; access control (identification, authorization and badging); access control (search); access control (escorting); access control (vital areas); alarm stations; detection aids; assessment aids; communications; testing and maintenance; compensatory measures; power supply; response; locks; keys and cobminations; records and reports; followup on previous items of noncompliance and followup on IE Bulletin No. 79-16. The inspection involved 108 inspector hours by three NRC inspectors.

  Results: The licensee was found to be in compliance with NRC requirements within the 20 areas examined during this inspection except for the following four items: (1) Testing and Maintenance - Certain vital area door/gate alarms and certain tamper alarms were not performance tested as required - Infraction; (2) Power Supply - Some security equipment failed to operate when transferred from 118 volt primary power to backup power - Infraction; (3) Communications - A communication room was found unlocked and unattended - Infraction; Power Supply - The loss of 118 volt primary power failed to annunciate as required - Deficiency.

- Inspection on January 7-25, 1980 (Report No. 50-206/80-02)
  Areas Inspected: Routine resident inspection of plant operations. The inspection involved 55 inspector hours by one NRC Resident Inspector.

  Results: No items of noncompliance or deviations were identified.

- Inspection on January 28 - February 7, 1980 (Report No. 50-206/80-03)
  Report being prepared; to be reported next month.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION 6.4.A.7 AND 6.4.D, THE DETAILED WRITTEN PROCEDURES PROVIDED FOR PREVENTIVE OR CORRECTIVE MAINTENANCE OPERATIONS WHICH WOULD HAVE AN EFFECT ON THE SAFETY OF THE REACTOR MUST BE FOLLOWED. ON NOVEMBER 20, 1979, THE INSPECTOR OBSERVED THAT THE HEAT-TRACED UNIT 1 EMERGENCY BORATE LINE (2" CH-42-152) WAS NOT PROPERLY INSULATED, INDICATING THAT CORRECTIVE MAINTENANCE PROCEDURES EMP-C-HT-20 OR MMP-C-G-017, WHICH REQUIRES REINSTALLATION OF INSULATION REMOVED, WERE NOT FOLLOWED. THE MISSING INSULATION MAY HAVE LED TO OR AGGRAVATED THE BORATE LINE PLUGGING.

INSPECTION STATUS

ENFORCEMENT STATUS

CHANGES WERE MADE TO THE OPERATIONAL QUALITY ASSURANCE PLAN WHICH CHANGED THE QA PROGRAM FOR OPERATIONS AS DESCRIBED IN THE FSAR SECTION 17.2. HOWEVER, THESE CHANGES WERE NOT SUBMITTED TO THE NRC IN THE SUBSEQUENT ANNUAL REPORT. THIS IS CONTRARY TO 10 CFR 50.59(B).
(7916 INFRACTION)

PURCHASE ORDERS FOR RESTART MODIFICATIONS TO UNIT 1 WERE ISSUED IN ACCORDANCE WITH A FIELD PURCHASING PROCEDURE WHICH WAS NOT APPROVED. THIS IS CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION V, AND THE QA PLAN FOR RESTART MODIFICATIONS TO UNIT 1.
(7916 DEFICIENCY)

RESTART MODIFICATION RM-1 WAS IMPLEMENTED WITH DRAWINGS WHICH WERE NOT APPROVED FOR CONSTRUCTION. THIS IS CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION VI, AND MET-ED. PROCEDURE GP-1003.
(7916 INFRACTION)

THE DISTRIBUTION OF DRAWINGS AND THE ELIMINATION OF OBSOLETE DRAWINGS WAS NOT BEING CONTROLLED. THIS IS CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION VI, AND THE FSAR SECTION 17.2.11.
(7916 INFRACTION)

SITE QC WAS NOT PERFORMING PERIODIC SURVEILLANCE OF WAREHOUSE STORAGE AREAS AS REQUIRED BY THE TMI OQA PLAN, AND MET-ED PROCEDURES AP1018 AND GP4014. GPUSC QA WAS NOT PERFORMING REGULARLY SCHEDULED INSPECTIONS OF UNIT 1 RESTART MODIFICATION MATERIAL IN STORAGE AS REQUIRED BY THE QA PLAN FOR RESTART MODIFICATIONS TO UNIT 1. THIS IS CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION XIII, ANSI N45.2.2-1972, AND THE PROCEDURES STATED ABOVE.
(7916 DEFICIENCY)

CORRECTIVE ACTION WAS NOT PERFORMED IN A TIMELY MANNER SUBSEQUENT TO THE CONDUCT OF INTERNAL AUDITS. THIS IS CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION XVI, AND THE OQA PLAN DESCRIBED IN UNIT 2 FSAR, SECTION 17.2.23.
(7916 INFRACTION)

INSPECTION STATUS

ENFORCEMENT STATUS

FACILITY OPERATING LICENSE NO. NPF-1 REQUIRES IN SECTION 2.D THAT "THE LICENSEE SHALL MAINTAIN IN EFFECT AND FULLY IMPLEMENT ALL PROVISIONS OF THE COMMISSION - APPROVED PHYSICAL SECURITY PLAN, INCLUDING AMENDMENTS AND CHANGES MADE PURSUANT TO THE AUTHORITY OF 10 CFR 50.54(P)." CONTRARY TO THIS, THE REQUIREMENTS OF THE PHYSICAL SECURITY PLAN (SECTION 1.6.2.7(1)) WERE NOT ADHERED TO IN THAT AN ONSITE VEHICLE WAS LEFT UNATTENDED IN AN UNSECURED CONDITION.
(8001 INFRACTION)

CONTRARY TO PARAGRAPH 5.A OF APPENDIX A TO 10 CFR 55 AND PARAGRAPH 7.1.7 OF TROJAN TRAINING PROCEDURE TP-2-2, WHICH IS THE LICENSEE'S NRC-APPROVED OPERATOR RETRAINING PROGRAM, THE LICENSEE DOCUMENTED ONLY ONE OF THE 10 OR MORE REACTIVITY CONTROL MANIPULATIONS PERFORMED BY ONE LICENSED SENIOR OPERATOR DURING HIS TWO-YEAR LICENSE TERM ENDING IN OCTOBER 1979.
(8002 DEFICIENCY)

CONTRARY TO THE LICENSEE'S COMMITMENT EXPRESSED IN PARAGRAPH 13.0 OF TROJAN NUCLEAR PLANT TRAINING PROCEDURE TP-2-2, WHICH IS THE LICENSEE'S NRC-APPROVED OPERATOR RETRAINING PROGRAM, THE TRAINING SUPERVISOR DID NOT PREPARE QUARTERLY SUMMARIES OF THE RETRAINING PROGRAM (INTENDED TO INCLUDE A GENERAL PROGRESS REPORT ON THE RETRAINING PROGRAM AND A LISTING OF ACTUAL OR POTENTIAL DIFFICULTIES WITH RESPECT TO MEETING ITS REQUIREMENTS).
(8002 DEVIATION)

CONTRARY TO THE LICENSEE'S COMMITMENT EXPRESSED IN PARAGRAPH 4.1.11 OF TROJAN NUCLEAR PLANT TRAINING PROCEDURE TP-2-2, WHICH IS THE LICENSEE'S NRC-APPROVED OPERATOR RETRAINING PROGRAM, THE OPERATIONS SUPERVISOR DID NOT REVIEW PARTICIPATION OF LICENSED REACTOR OPERATORS OR SENIOR REACTOR OPERATORS IN THE REACTIVITY CONTROL MANIPULATIONS PORTION OF THE RETRAINING PROGRAM.
(8002 DEVIATION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST (CITE RO REPORT NUMBER, IF APP.)

SYSTEMS AND COMPONENT PROBLEMS:

None.

FACILITY ITEMS (PLANS AND PROCEDURES):

+ 1. The phase two Public Hearing on control building modifications is planned for April 1980.

2. A two and one-half month refueling outage is scheduled to commence in mid-April 1980.

MANAGERIAL ITEMS:

None.

PLANT STATUS

+ The plant operated at power throughout the month except for a brief outage following a plant trip on February 5, 1980. The trip was caused by inadvertent grounding of an instrument bus. At the end of February, the plant was in coastdown at approximately 80% power.

LAST IE SITE INSPECTION DATE: 02/01-29/80+

INSPECTION REPORT NO: 50-344/80-04+

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
NONE				

SUMMARY

INSPECTION SUMMARY:

+ Inspection on January 2-31, 1980 (Report No. 50-344/80-01)
Areas Inspected: Routine inspections of plant operations, maintenance, physical security, calibration, requalification training, surveillance, and followup on a Licensee Event Report. The inspection involved 84 inspector hours by the NRC Resident Inspector.

Results: One item of noncompliance was identified (Infraction - Failure to comply with a physical security procedure for securing of onsite vehicles).

+ Inspection on February 15, 1980 (Report No. 50-344/80-03)
Report being prepared; to be reported next month.

+ Inspection on February 1-29, 1980 (Report No. 50-344/80-04)
Report being prepared; to be reported next month.

LAST IE SITE INSPECTION DATE: FEBRUARY 28-29, 1980

INSPECTION REPORT NO: 50-250/80-11

SUMMARY

INSPECTION SUMMARY

INSPECTION FEBRUARY 5-7 (80-05): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 10 INSPECTOR-HOURS ON SITE IN THE AREAS OF PIPE SUPPORT BASEPLATE DESIGNS USING CONCRETE EXPANSION ANCHOR BOLTS (IEB 79-02); SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS (IEB-79-14). OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION DECEMBER 17-20 (79-40): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED 13 1/2 INSPECTOR-HOURS ON SITE IN THE AREA OF REVIEW OF EVENTS SURROUNDING THE OVEREXPOSURE OF A CONTRACT WORKER. THREE APPARENT ITEMS OF NONCOMPLIANCE WERE FOUND IN THE ONE AREA INSPECTED (INFRACTION - EXCEEDED QUARTERLY WHOLE BODY RADIATION EXPOSURE LIMIT; INFRACTION - FAILURE TO HAVE A PROCEDURE; AND INFRACTION - FAILURE TO FOLLOW PROCEDURES).

INSPECTION JANUARY 8-11 (80-01): THIS ROUTINE UNANNOUNCED INSPECTION INVOLVED 17 INSPECTOR-HOURS ON SITE IN THE AREAS OF INSERVICE-INSPECTION DATA REVIEW AND EVALUATION; WELDING AND NONDESTRUCTIVE TESTING; IE BULLETIN 79-13, RADIOGRAPHY (UNIT 3); LP INSPECTION OF PRESSURIZER NOZZLE/SAFE END WELDS; EDDY CURRENT TESTING AND PLUGGING OF UNIT 3 STEAM GENERATORS. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-040/ 01T-0	12/12/79	12/28/79	14 DAY LER	INCORRECT VALVE WEIGHTS USED IN SEISMIC ANALYSIS OF FEEDWATER LINE FLOW REGULATOR BYPASS.
80-001/ 03L-0	01/03/80	02/04/80	30 DAY LER	FIRE PUMP LEFT INOPERABLE AFTER MAINTENANCE.

INSPECTION JANUARY 18-21 (80-02): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 7 INSPECTOR-HOURS ON SITE IN THE AREAS OF ENGINEERED SAFEGUARDS AND EMERGENCY POWER SYSTEMS INTEGRATED TESTING AND PERSONNEL AIRLOCK TESTING. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 7-11 (80-03): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 13 1/2 INSPECTOR-HOURS ON SITE IN THE AREA OF UPGRADING OF THE TURKEY POINT FIRE PROTECTION PROGRAM. OF THE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED, BUT ONE APPARENT DEVIATION WAS FOUND (DEVIATION - FAILURE TO IMPLEMENT A FIRE PROTECTION QUALITY ASSURANCE PROGRAM).

7	02/25/80	F	.0	A	5		HC	HTEXCH	LOAD REDUCTION DUE TO SECONDARY WATER CHEMISTRY LIMITATIONS.

SUMMARY

OPERATION WAS ROUTINE FOLLOWING RETURN TO POWER ON 02/06/80 FROM A REFUELING AND MAINTENANCE OUTAGE. THE UNIT WAS AGAIN REMOVED FROM SERVICE ON 02/06/80, 02/07/80, 02/20/80, AND 02/21/80 TO BALANCE THE ROTOR, AND ON 02/08/80 FOR PERIODIC TESTING OF THE TURBINE OVERSPEED PROTECTION SYSTEM. A UNIT TRIP ALSO OCCURRED ON 02/08/80 WHEN THE LOSS OF EXCITATION RELAY ACTUATED ON A FALSE SIGNAL IN THE VOLTAGE REGULATOR. ON 2/25/80, LOAD WAS REDUCED DUE TO SECONDARY WATER CHEMISTRY LIMITATIONS.

8	02/23/80	F	.0	A	5		HC	HTEXCH	LOAD REDUCTION TO REPAIR CONDENSER TUBE LEAK.

SUMMARY

OPERATION WAS ROUTINE DURING THE REPORT PERIOD, EXCEPT FOR A UNIT TRIP BY THE TURBINE PROTECTION SYSTEM ON 02/20/80. THE UNIT WAS TAKEN OFF-LINE ON 02/14/80 TO REPAIR THE TURBINE CONTROL OIL SYSTEM. LOAD REDUCTIONS OCCURRED ON 02/01/80 AND 02/23/80 TO REPAIR CONDENSER TUBE LEAKS.

III. Independent Spent Fuel Storage Installations (h)							
Morris Operations		750 MTU (j)	310	390 MTU (j)	1490 MTU (j)		
NFS(i)		250 MTU	170 MTU	80 MTU			

(a) At each refueling outage approximately 1/3 of a PWR core and 1/4 of a BWR core is off-loaded.
(b) Some of these dates have been adjusted by staff assumptions.
(c) This is the total for both units.
(d) Plant not in commercial operation.
(e) Some spent fuel stored at Brunswick.
(f) Authorized a total 2088 BWR and 304 PWR assemblies for both pools.
(g) Robinson 2 assemblies being shipped to Brunswick for storage.
(h) Capacity is in metric tons of uranium; 1 MTU = 2 PWR assemblies or 5 BWR assemblies.
(i) No longer accepting spent fuel.
(j) Racked for 700 MTU.
(k) Reserved
(l) This is the station total.

N/S = Not Scheduled

REACTOR-YEARS OF EXPERIENCE

AS OF 2/29/80

The total of Reactor years of experience is as the sum of all calender days for each unit, from the date that electricity was first generated until a final shutdown date or the status date, whichever comes first, divided by 365.25 days/year.

If a date is unknown, the first day of the first month of operation is substituted. Units which have not yet generated electricity but which are licensed are listed but not included in the computation.

(INFORMATION INCLUDES BOTH LICENSED AND NON–LICENSED ELECTRICAL UNITS).

OPERATING UNITS STATUS REPORT

DATA AS OF 3-31-80

LICENSED OPERATING REACTORS

AUTHORIZATION AND CLEARANCE

THE U.S. NUCLEAR REGULATORY COMMISSION'S OFFICE OF MANAGEMENT AND PROGRAM ANALYSIS PUBLISHES THIS MONTHLY STATUS REPORT "AS PART OF THE REPORTING REQUIREMENTS IN SECTION 50.36 OF 10 CFR PART 50 UNDER GAO CLEARANCE NUMBER B-180225, WITH AN EXPIRATION DATE OF SEPTEMBER 30, 1981," AS STATED IN THE OCTOBER 3, 1978 LETTER FROM JOHN M. LOVELADY, ASSISTANT DIRECTOR, GENERAL GOVERNMENT DIVISION, U. S. GENERAL ACCOUNTING OFFICE, TO J.M. FELTON, DIRECTOR, DIVISION OF RULES AND RECORDS, U.S. NUCLEAR REGULATORY COMMISSION.

STATEMENT OF PURPOSE

The U. S. Nuclear Regulatory Commission's monthly OPERATING UNITS STATUS REPORT – LICENSED OPERATING REACTORS, provides data on the operation of nuclear units as timely and accurately as possible. This information is collected by the Office of Management and Program Analysis from the Headquarters Staff of NRC's Office of Inspection and Enforcement, from NRC's Regional Offices, and from utilities. Since all of the data concerning operation of the units is provided by the utility operators less than two weeks after the end of the month, necessary corrections to published information are shown on the ERRATA page.

This report is divided into three sections: the first contains monthly highlights and statistics for commercial operating units, and errata from previously reported data; the second is a compilation of detailed information on each unit, provided by NRC Regional Offices and IE Headquarters; and the third section is an appendix containing nuclear availability and capacity factors, forced outage rate statistics, spent fuel storage capability, reactor-years of experience and non-power reactors in the United States.

Throughout the report, statistical factors for periods greater than a report month, or for more than one unit, are computed as the arithmetic average of each unit's individual operating statistics. The statistical factors for each unit for the report month are computed from actual power production for the month. The factors for the life-span of each unit (the "Cumulative" column) are reported by the utility and are not entirely re-computed by NRC. Utility power production data is checked for consistency with previously submitted statistics.

It is hoped this status report proves informative and helpful to all agencies and individuals interested in analyzing trends in the nuclear industry which might have safety implications, or in maintaining an awareness of the U. S. energy situation as a whole.

ARKANSAS 1 THROUGH ZION 2 PAGES A–2 TO Z–5

- Facility Data
- Inspection and Enforcement Status
- Reports Received from Licensee
- Operating Status
- Average Daily Power Level (MWe)
- Unit Shutdowns/Reductions

SECTION 3 – APPENDIX

STATUS OF SPENT FUEL STORAGE CAPABILITY 3-2
REACTOR-YEARS OF EXPERIENCE 3-3
NON-POWER REACTORS IN THE U.S. 3-4

GLOSSARY

AVERAGE DAILY POWER LEVEL (MWe)	The net electrical energy generated during the day (measured from 0001 to 2400 hours inclusive) in megawatts hours divided by 24 hours.
LICENSED THERMAL POWER (MWt)	The maximum thermal power of the reactor authorized by the NRC, expressed in megawatts.
DATE OF COMMERCIAL OPERATION	Date unit was declared by utility owner to be available for the regular production of electricity; usually related to satisfactory completion of qualification tests as specified in the purchase contract and to accounting policies and practices of utility.
DESIGN ELECTRICAL RATING (DER) (Net MWe)	The nominal net electrical output of the unit specified by the utility and used for the purpose of plant design.
FORCED OUTAGE	An outage required to be initiated no later than the weekend following discovery of an off-normal condition.
FORCED OUTAGE HOURS	The clock hours during the report period that a unit is unavailable due to forced outages.
GROSS ELECTRICAL ENERGY GENERATED (MWH)	Electrical output of the unit during the report period as measured at the output terminals of the turbine generator, in megawatts hours.
GROSS HOURS	The clock hours from the beginning of a specified situation until its end. For outage durations, the clock hours during which the unit is not in power production.
GROSS THERMAL ENERGY GENERATED (MWH)	The thermal energy produced by the unit during the report period as measured or computed by the licensee in megawatt hours.
HOURS GENERATOR ON-LINE	Also, "Unit Service Hours." The total clock hours in the report period during which the unit operated with breakers closed to the station bus. These hours added to the total outage hours experienced by the unit during the report period, shall equal the hours in the report period.
HOURS IN REPORTING PERIOD	For units in power ascension at the end of the period, the gross hours from the beginning of the period or the first electrical production, whichever comes last, to the end of the period. For units in commercial operation at the end of the period, the gross hours from the beginning of the period or of commercial operation, whichever comes last, to the end of the period or decommissioning, whichever comes first.
HOURS REACTOR CRITICAL	The total clock hours in the report period during which the reactor sustained a controlled chain reaction.
MAXIMUM DEPENDABLE CAPACITY (GROSS) (MDC Gross) (Gross MWe)	Dependable main-unit gross capacity, winter or summer, whichever is smaller. The dependable capacity varies because the unit efficiency varies during the year due to cooling water temperature variations. It is the gross electrical output as measured at the output terminals of the turbine generator during the most restrictive seasonal conditions (usually summer).
MAXIMUM DEPENDABLE CAPACITY (NET) (MDC Net) (Net MWe)	Maximum Dependable Capacity (Gross) less the normal station service loads.
NAMEPLATE RATING (Gross MWe)	The nameplate power designation of the generator in megavolt amperes (MVA) times the nameplate power factor of the generator. NOTE: The nameplate rating of the generator may not be indicative of the maximum or dependable capacity, since some other item of equipment of a lesser rating (e.g., turbine) may limit unit output.
NET ELECTRICAL ENERGY GENERATED	Gross electrical output of the unit measured at the output terminals of the turbine generator during the reporting period, minus the normal station service electrical energy utilization. If this quantity is less than zero, a negative number should be recorded.
OUTAGE	A situation in which no electrical production takes place.
OUTAGE DATE	As reported on Appendix D of Reg. Guide 1.16, the date of the start of the outage. If continued from a previous month, report the same outage date but change "Method of Shutting Down Reactor" to "4 (Other)" and add a note: "Continued from previous month."
OUTAGE DURATION	The total clock hours of the outage measured from the beginning of the report period or the outage, whichever comes last, to the end of the report period or the outage, whichever comes first.
OUTAGE NUMBER	A number unique to the outage assigned by the licensee. The same number is reported each month in which the outage is in progress. One format is "76-05" for the fifth outage to occur in 1976.
PERIOD HOURS	See "Hours in Reporting Period."
POWER REDUCTION	A reduction in the Average Daily Power Level of more than 20% from the previous day. All power reductions are defined as outage of zero hours durations for the purpose of computing unit service and availability factors, and forced outage rate.

REACTOR AVAILABLE HOURS	The total clock hours in the report period during which the reactor was critical or was capable of being made critical. (Reactor Reserve Shutdown Hours + Hours Reactor Critical.)
REACTOR AVAILABILITY FACTOR	$\frac{\text{Reactor Available Hours} \times 100}{\text{Period Hours}}$
REACTOR RESERVE SHUTDOWN	The cessation of criticality in the reactor for administrative or other similar reasons when operation could have been continued.
REACTOR RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the reactor is in reserve shutdown mode. NOTE: No credit is given for NRC imposed shutdowns.
REACTOR SERVICE FACTOR	$\frac{\text{Hours Reactor Critical} \times 100}{\text{Period Hours}}$
REPORT PERIOD	Usually, the preceding calendar month. Can also be the preceding calendar year, (Year-to-Date), or the life-span of a unit (cumulative).
RESTRICTED POWER LEVEL	Maximum net electrical generation to which the unit is restricted during the report period due to the state of equipment, external conditions, administrative reasons, or a direction by NRC.
SCHEDULED OUTAGE	Planned removal of a unit from service for refueling, inspection, training, or maintenance. Those outages which do not fit the definition of "Forced Outage" perforce are "Scheduled Outages."
STARTUP AND POWER ASCENSION TEST PHASE	Period following initial criticality during which the unit is tested at successively higher levels, culminating with operation at full power for a sustained period and completion of warranty runs. Following this phase, the utility generally considers the unit to be available for commercial operation.
UNIT	The set of equipment uniquely associated with the reactor, including turbine generators, and ancillary equipment, considered as a single electrical energy production facility.
UNIT AVAILABLE HOURS	The total clock hours in the report period during which the unit operated on-line or was capable of such operation. (Unit Reserve Shutdown Hours + Hours Generator On-Line.)
UNIT AVAILABILITY FACTOR*	$\frac{\text{Unit Available Hours} \times 100}{\text{Period Hours}}$
UNIT CAPACITY FACTORS	
– Using Licensed Thermal Power	$\frac{\text{Gross Thermal Energy Generated} \times 100}{\text{Period Hours} \times \text{Lic. Thermal Power}}$
– Using Nameplate Rating	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{Nameplate Rating}}$
– Using DER	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{DER}}$
– Using MDC Gross	$\frac{\text{Gross Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Gross}}$
– Using MDC Net	$\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Net}}$

NOTE: if MDC Gross and/or MDC Net have not been determined. the DER is substituted for this quantity for Unit Capacity Factor calculations.

UNIT FORCED OUTAGE RATE	$\frac{\text{Forced Outage Hours}}{\text{Unit Service Hours} + \text{Forced Outage Hours}}$
UNIT RESERVE SHUTDOWN	The removal of the unit from on-line operation for economic or other similar reasons when operation could have been continued.
UNIT RESERVE SHUTDOWN HOURS	The total clock hours in the report period during which the unit was in reserve shutdown mode.
UNIT SERVICE FACTOR	$\frac{\text{Unit Service Hours} \times 100}{\text{Period Hours}}$
UNIT SERVICE HOURS	See "Hours Generator On-Line."

SECTION 1 — CURRENT DATA SUMMARIES

MONTHLY HIGHLIGHTS OF COMMERCIAL NUCLEAR POWER UNITS

FOR MONTH OF

MARCH 1980

LICENSED POWER REACTORS:

NUMBER		CAPACITY [1] MWe (Net)
67	IN COMMERCIAL OPERATION	49,023
67 [2]	LICENSED TO OPERATE	49,023
1 [3]	LICENSED FOR FUEL LOADING AND LOW POWER TESTING	

POWER GENERATION	REPORT MONTH	PREVIOUS MONTH	YEAR-TO-DATE
1. GROSS ELECTRICAL (MWHE)	20,881,056	20,287,108	61,207,318
2. NET ELECTRICAL (MWHE)	19,914,705	19,331,056	58,332,493
3. AVG. UNIT SERVICE FACTOR (%)	59.3	63.1	61.3
4. AVERAGE UNIT AVAILABILITY FACTOR (%)	59.6	63.1	61.6
5. AVERAGE UNIT CAPACITY FACTOR (MDC) (%)	53.9	56.4	56.0
6. AVG. UNIT CAPACITY FACTOR (DER) (%)	52.6	54.9	53.6
7. FORCED OUTAGE RATE (%)	11.6	10.4	10.5

NOTES

[1] BASED UPON MAXIMUM DEPENDABLE CAPACITY; DESIGN ELECTRIC RATING USED IF MDC NOT DETERMINED.

[2] EXCLUDES INDIAN POINT 1 (DER = 265), HUMBOLDT BAY (DER = 65), AND THREE MILE ISLAND 2 (DER = 906) WHICH HAVE OPERATING LICENSES BUT ARE SHUTDOWN INDEFINITELY.

[3] SEQUOYAH 1 (DER =1148) WAS LICENSED ON FEBRUARY 29, 1980 FOR FUEL LOADING AND LOW POWER TESTING ONLY.

ACTUAL VS. POTENTIAL ENERGY PRODUCTION

			% OF POTENTIAL PRODUCTION
POTENTIAL ENERGY PRODUCTION IN THIS PERIOD BY UNITS IN COMMERCIAL OPERATION (Using Maximum Dependable Capacity Net)		35,925,912 MWHe	
ENERGY ACTUALLY PRODUCED DURING THIS REPORT PERIOD	=	19,914,705 MWHe NET	55.4
ENERGY NOT PRODUCED DURING THIS REPORT PERIOD DUE TO SCHEDULED OUTAGES (NET)	=	11,334,698 MWHe	31.6
ENERGY NOT PRODUCED DURING THIS REPORT PERIOD DUE TO FORCED OUTAGES (NET)	=	3,046,737 MWHe	8.5
ENERGY NOT PRODUCED DURING THIS REPORT PERIOD FOR OTHER REASONS (NET)	=	1,629,772 MWHe	4.5
TOTAL		35,925,912 MWHe =	100%
ENERGY NOT PRODUCED THIS REPORT PERIOD DUE TO NRC IMPOSED SHUTDOWNS AND RESTRICTIONS	=	2,967,216 MWHe	8.3%
NUMBER OF UNITS WITH POWER RESTRICTIONS IMPOSED BY NRC	=	1	

OUTAGE DATA

	NUMBER	HOURS	PERCENT OF CLOCK TIME	MWHE LOST PRODUCTION
1. FORCED OUTAGES DURING MONTH	52	4,565.7	9.3	3,046,737
2. SCHEDULED OUTAGES DURING THE MONTH	37	16,074.1	32.6	11,334,698
3. TOTAL	89	20,639.8	41.9	14,381,435

MWHE LOST PRODUCTION = Down time x maximum dependable capacity net

2. COMPUTED BY RATIO OF VENDOR TOTALS

	GE BWR's	W PWR's	CE PWR's	B&W PWR's	All PWR's
NET ELECTRICAL PRODUCTION	5,921,009	9,797,409	2,243,943	1,835,380	13,876,732
MDC NET	17,327	18,428	6,090	6,737	31,255
CFMDC	45.9	71.5	56.3	36.6	61.1

Capacity factor in this page, denoted as CFMDC, is a function of the net maximum dependable capacity. See the corresponding definition in the Glossary. The vendor averages are computed by the formula :

$$\frac{\text{Net Electrical Energy Produced by Vendor}}{\text{Potential Electrical Production By Vendor In This Month.}} \quad X\ 100\%$$

Units Excluded	Reason for Exclusion
Indian Point 1 Humboldt Bay Three Mile Island 2	Unit Shutdown Indefinitely
Big Rock Point	Not Representative of Typical BWRs
LaCrosse	Not Representative of Typical BWRs and Atypical Vendor
Fort St. Vrain	Atypical Vendor and Reactor Design

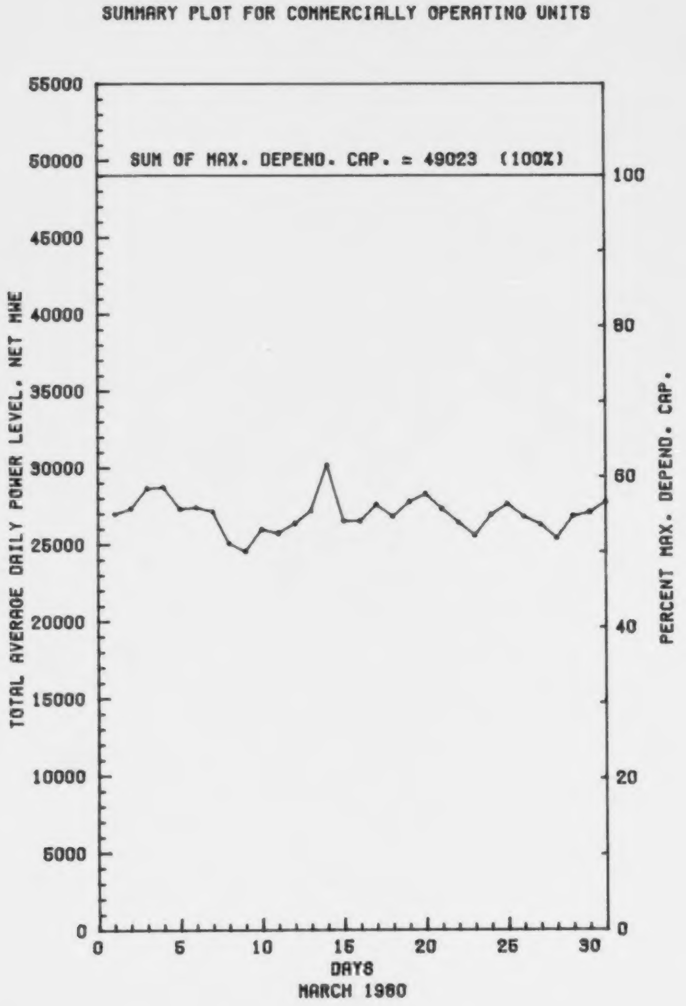
AVERAGE DAILY POWER LEVEL FOR ALL COMMERCIALLY OPERATING UNITS

This chart depicts the average daily power level for the units in commercial operation during the month.

The straight line on the graph labelled "SUM OF MAX DEP CAP'S" is plotted at the value shown by summing the separate maximum dependable capacities of the commercially operating units (in Net MWe). The plot shown below the line is calculated by summing the separate average daily power levels of the commercially operating units for each day of the month.

The scale on the left vertical axis runs in 1,000 MWe increments from 0 to 55,000 MWe (Net). The right vertical axis shows the percentage in 10% increments, up to 100% of the "SUM OF MAX DEP CAP'S."

It should be recognized that the 100% line would be obtainable only if all of the commercially operating units operated at 100% capacity, 24 hours per day, for the entire month. In other words, since any power generator must occasionally shut down to refuel and/or perform needed maintenance, and also since 100% capacity production is not always required by power demands, the 100% line is a theoretical goal and not a practical one.



ERRATA

Corrections and Amendments to Previously-Reported Data

(NOTE: These changes are reflected in the data contained in the current report)

CORRECTIONS TO NUREG C[illegible] VOL. 4 NO. 3 MARCH 1980

Page	Unit Name	Item	Correction
C-5	Calvert Cliffs 2	16. Gross Thermal Energy (MWH)	The February entry should have been 1,772,467 not the published value of 3,772,467. Year and cumulative values should be decreased by 2,000,000.
C-9	Cook 2	16. Gross Thermal Energy (MWH)	The correct value for the month of February is 2,165,634.
H-5	Hatch I	16. Gross Thermal Energy (MWH)	The correct value for the month of February should be 1,266,310 not 1,266,120.
H-7	Hatch 2	16. Gross Thermal Energy (MWH)	The correct value should be 1,588,770 rather than the published value of 1,588,320.
N-5	North Anna 1	16. Gross Thermal Energy (MWH)	The February entry should have been 1,483,418 rather than 1,690,114.

MULTIPLE - ISSUE CORRECTIONS

Fort St. Vrain	Item 12. Hours reactor was critical should be changed from 36.0 to 36.3 for the month of January 1980.
Maine Yankee	The licensee has recomputed the lifetime value of gross thermal energy.
North Anna	The monthly entries for Item 13. Reactor reserve shutdown hours for the lifetime of the unit should be:

6/78	2.9 Hours
7/78	19.5

OTHER ITEMS OF INTEREST

FACILITY ITEMS (PLANS AND PROCEDURES):

Refueling/modification outage commenced on 11/30/79. The outage is expected to last until 7/80.

MANAGERIAL ITEMS:

A partial reorganization of station and corporate departments began on 12/16/79, and is substantially complete, pending further personnel assignments and approval of revised Tech. Specs.

PLANT STATUS:

Refueling completed on 3/1/80. In-service inspection, modifications and maintenance will continue through current outage.

LAST IE SITE INSPECTION DATE: 3/7/80

INSPECTION REPORT NO: 50-334/80-06

SUMMARY

INSPECTION SUMMARY

50-334/80-02 - Jan 8-11: Routine, unannounced inspection by one region-based inspector (29.5 hours). Inspection areas (3): inservice inspection (ISI) activities including ISI program review, review of implementing NDE procedures and ISI data review; activities associated with design change modifications; and licensee action on previous inspection findings. Noncompliances (1) (failure to review and approve NDE procedure prior to its implementation).

50-334/80-04 - Jan 22: Special public enforcement meeting convened by the Director, Office of Inspection and Enforcement, to discuss the licensee's actions pursuant to an Order Modifying License issued on December 5, 1979. The meeting was attended by senior licensee and NRC:OIE management and the public. A subsequent question and answer session was held to provide NRC responses to public concerns.

SUMMARY

INSPECTION SUMMARY

+ INSPECTION DECEMBER 10 - JANUARY 4 (79-48): THIS ROUTINE INSPECTION INVOLVED 21 RESIDENT INSPECTOR-HOURS IN THE AREAS OF PLANT OPERATIONS, PLANT TOURS, REPORTABLE OCCURRENCES, REFUELING, MAINTENANCE, SURVEILLANCE TESTING, PLANT PHYSICAL PROTECTION, AND RADIATION AREA CONTROLS. OF THE EIGHT AREAS INSPECTED NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SEVEN AREAS. ONE ITEM OF APPARENT NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - USE OF TEST PROCEDURE WHICH HAD BEEN SUPERCEEDED BY REVISION).

INSPECTION FEBRUARY 6-8 (80-05): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 5 INSPECTOR-HOURS ON SITE IN THE AREA OF SEISMIC ANALYSIS FOR AS-BUILT SAFETY-RELATED PIPING SYSTEMS (IE BULLETIN 79-14). NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 19-24 (80-08): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 59 INSPECTOR-HOURS ON SITE IN THE AREAS OF WITNESSING THE INTEGRATED LEAK RATE TESTING ON UNIT 1. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

+ LAST IE SITE INSPECTION DATE: MARCH 4-7, 1980

+ INSPECTION REPORT NO: 50-325/80-07

SUMMARY

INSPECTION SUMMARY

+ INSPECTION NOVEMBER 27-29 (79-42): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 25 INSPECTOR-HOURS ON SITE IN THE AREA OF UNIT 1 REACTOR TRIP THAT OCCURRED ON NOVEMBER 20, 1979. OF THE AREA INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 5-8 (80-04): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 29 INSPECTOR-HOURS ON SITE IN THE AREAS OF SMALL BREAK LOSS OF COOLANT PROCEDURES AND TRAINING. WITHIN THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 2 - FEBRUARY 2 (80-05): THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED 51 MANHOURS OF INSPECTION TIME ON SITE OF PREVIOUSLY IDENTIFIED EVENTS, PLANT OPERATIONS, RADIATION PROTECTION, PHYSICAL PROTECTION, QUALITY ASSURANCE, ORGANIZATION AND ADMINISTRATION, AND SURVEILLANCE TESTING. OF THE SIX AREAS INSPECTED NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 24 (80-06): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 25 INSPECTOR-HOURS ONSITE FOR THE PURPOSE OF OBTAINING CAROLINA POWER AND LIGHT COMPANY MANAGEMENT AND OPERATING STAFF ASSESSMENT OF THE EFFECT ON PLANT SAFETY REGARDING IMPLEMENTATION OF THE NEAR TERM OPERATING LICENSE ACTION ITEMS PRESENTED IN NUREG 0660 (DRAFT). OF THE AREAS DISCUSSED, NO APPARENT ITEMS OF NONCOM- PLIANCE OR DEVIATIONS WERE IDENTIFIED. THE LICENSEE, BOTH MANAGEMENT AND OPERATING STAFF, PROVIDED SIGNIFICANT COMMENTS ON THE SCOPE AND IMPLEMENTATION DATES FOR THE NUMEROUS ITEMS IN THE DRAFT NUREG. SAFETY CONCERNS WERE EXPRESSED REGARDING OVER PRIORITIZING OF LICENSEES EFFORTS BY THE NRC AND THE HEAVY IMPACT ON LIMITED INDUSTRY RESOURCES.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
80-20/ 03L-0	02/06/80	02/22/80	30 DAY LER	REACTOR ISOLATION PROTECTION VALVES FOUND CLOSED ON CONTAINMENT GAS AND PARTICULATE MONITORS.

INSPECTION MARCH 4-7 (80-07): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 24 INSPECTOR-HOURS ON SITE IN THE AREAS OF SPECIAL ULTRASONIC EXAMINATION OF RECIRCULATION SYSTEM INLET NOZZLES, (UNIT 2); INSERVICE INSPECTION OF CLASS 1 PIPING, (UNIT 2) PREPARATIONS FOR MARK I TORUS MODIFICATIONS, (UNITS 1 AND 2). OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 2-29 (80-08): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 30 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, PLANT TOURS, RADIATION PROTECTION, QUALITY ASSURANCE, ORGANIZATION AND ADMINISTRATION, REVIEW OF LICENSEE RESPONSE TO IE BULLETINS AND FOLLOW- UP ON ABNORMAL EVENTS. OF THE SIX AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

UNIT SHUTDOWNS/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
004	03/04/80	F	31.3	A	5		HC	HTEXCH	POWER WAS REDUCED TO LEAK CHECK THE CONDENSER WATERBOXES. 1B-NORTH CONDENSER WAS CHECKED FOR LEAKS BY HANGING HANDI-WRAP ON TUBE SHEETS. LEAKS COULD NOT BE IDENTIFIED BY THIS METHOD; A SCIENCE APPLICATIONS, INC., REP. WAS CONTACTED TO COME IN AND USE HELIUM TO FIND THE LEAKS. WATERBOX WAS RETURNED TO SERVICE AND LEAKS CONTROLLED WITH SAWDUST UNTIL THE VENDOR COULD GET ON SITE TO IDENTIFY LEAKS.
005	03/08/80	F	23.7	A	5		HC	HTEXCH	POWER REDUCED TO LEAK CHECK AND REPAIR CONDENSER WATERBOX 1B-NORTH. 1B-NORTH CONDENSER WAS CHECKED FOR LEAKS USING A HELIUM LEAK DETECTION METHOD. APPROXIMATELY FIVE TUBES WERE IDENTIFIED AS LEAKING. THESE TUBES WERE PLUGGED AND THE CONDENSER RETURNED TO SATISFACTORY SERVICE.
006	03/23/80	F	43.6	H	3		IA	INSTRU	REACTOR SCRAM DUE TO TURBINE STOP VALVE FAST CLOSURE CAUSED BY A REACTOR HIGH WATER LEVEL DURING TRANSFER FROM 3-ELEMENT FEEDWATER CONTROL TO SINGLE ELEMENT CONTROL IN ORDER TO REPAIR A FAILED STEAM FLOW INSTRUMENT. THE OPERATOR NULLED INCORRECTLY THE FEEDWATER MASTER CONTROLLER PRIOR TO SHIFTING TO MANUAL CONTROL WHICH CAUSED THE VESSEL LEVEL TO DROP WHEN MANUAL WAS SELECTED.
007	03/26/80	F	39.8	B	1		CB	VALVEX	POWER REDUCED AND THE UNIT SEPARATED FROM GRID DUE TO EXCESSIVE DRYWELL FLOOR LEAKAGE. A NITROGEN INERTING PROBLEM DUE TO THE INOPERABILITY OF THE AUXILIARY BOILERS EXTENDED THE OUTAGE. TWO VALVES IN THE DRYWELL WERE IDENTIFIED AS THE CAUSE(S) OF THE LEAKAGE. BOTH VALVES WERE REPAIRED AND THE EXCESSIVE LEAKAGE STOPPED.
008	03/31/80	F	10.8	A	3		EB	ELECON	REACTOR SCRAM ON LOW WATER LEVEL DUE TO THE APPARENT LOSS OF 1D BUS.

SUMMARY

THE REACTOR SCRAMMED ON 03/23/80 WHEN A STUCK PEN RECORDER GAVE ERRONEOUS WATER LEVEL INDICATIONS, AND ON 03/31/80 DUE TO APPARENT LOSS OF THE 1D BUS. LOAD REDUCTIONS OCCURRED ON 03/04/80 AND 03/08/80 TO LEAD CHECK CONDENSER WATERBOXES. THE UNIT WAS TAKEN OFF-LINE ON 03/26/80 TO EXAMINE DRYWELL FLOOR LEAKAGE.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO TECHNICAL SPECIFICATION 3.5V THE REACTOR WAS RESTARTED 12/12/76 WITH A DEFECTIVE SHOCK SUPPRESSOR ON THE RHR SYSTEM.
(7704 INFRACTION)

CONTRARY TO 10CFR20.104(A), DURING THE PERIOD MAY 20, 1976 TO SEPTEMBER 30, 1976, A MINOR, EMPLOYED BY A LICENSEE CONTRACTOR, WAS EXPOSED TO RADIATION IN EXCESS OF QUARTERLY LIMITS FOR WHOLEBODY EXPOSURES.
(7705 INFRACTION)

CONTRARY TO APPENDIX B TECHNICAL SPECIFCATION 5.3.1, WRITTEN PROCEDURES WERE NOT PROVIDED FOR IMPLEMENTATION OF TECHNICAL SPECIFICATIONS 2.2.2 AND 3.2.2.
(7705 INFRACTION)

CONTRARY TO TECHNICAL SPECIFICATION 6.8.1, FIRE PROTECTION PROCEDURE FP 4, "PERIODIC TEST SCHEDULING", WAS NOT FOLLOWED IN PERFORMING MONTHLY INSPECTIONS OF FIRE EXTINGUISHERS IN THAT AT LEAST THREE EXTINGUISHERS IN UNIT 2 REACTOR BUILDING WERE NOT INSPECTED DURING THE MONTH OF MARCH, 1977.
(7706 DEFICIENCY)

AS REQUIRED BY TECHNICAL SPECIFICATION 6.8.1, PROCEDURES SHALL BE WRITTEN AND IMPLEMENTED. PROCEDURTI-200, APPENDIX A, REQUIRES FORMAL CLASSROOM LECTURES FOR LICENSEES SCORING LESS THAN 80% IN A SPECIFIC AREA OF AN ANNUAL EXAMINATION. PROCEDURE TI-200, APPENDIX A, WAS NOT IMPLEMENTED IN THAT OF EIGHT (8) LECTURE SERIES CONDUCTED IN 1978, FOUR (4) WERE CONDUCTED LARGELY OR IN PART AS SELF-STUDY PERIODS. SPECIFICALLY, THE LECTURE ON RADIATION PROTECTION WAS CONDUCTED WITH NO INSTRUCTOR AVAILABLE FOR 90% OF THE TIME. THE LECTURES ON GENERAL AND SPECIFIC OPERATING CHARACTERISTICS WERE CONDUCTED WITH NO INSTRUCTOR AVAILABLE FOR 50% OF THE TIME. AND, THE LECTURE ON INSTRUMENTATION WAS CONDUCTED WITH NO INSTRUCTOR AVAILABLE FOR 20% OF THE TIME.
(7922 DEFICIENCY)

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 50, APP B, CRITERION 16, CORRECTIVE ACTION WAS NOT PROMPTLY TAKEN TO CORRECT A GROUNDED CONDITION ON THE VITAL 125 VOLT D.C. BUS # 21. THIS GROUND WAS DISCOVERED ON 11/5/79 & NOT CORRECTED AS OF 1/29/80, AT WHICH TIME ANOTHER GROUND OCCURRED ON THE 12B REACTOR COOLANT PUMP CONTROL CIRCUIT & RESULTED IN AN INADVERTANT STARTING OF THE RCP.
(7923 INFRACTION)

CONTRARY TO 10 CFR 50, APP B, CRIT XVI, CORRECTIVE ACTION WAS NOT INITIATED TO DETERMINE THE CAUSE OF THE INADVERTANT OPENING OF A UNIT 1 POWER OPERATED RELIEF VALVE RV 404 WHICH OCCURRED ON 1/29/80 WHILE THE PLANT WAS IN COLD SHUTDOWN.
(7923 INFRACTION)

UNIT SHUTDOWNS/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
80-02	03/01/80	F	9.7	A	3		HF	PUMPXX	LEAK ON #14 CIRCULATING WATER PUMP COOLER IMPINGING ON THE INTAKE STRUCTURE HIGH-WATER LEVEL TRIP CIRCUITRY CAUSED LOSS OF ALL CIRCULATING WATER PUMPS.
80-03	03/25/80	F	24.1	A	3		RC	CONROD	LOSS OF VOLTAGE SUPPLY TO THE CONTROL RODS AND DRIVES.

SUMMARY

THE UNIT OPERATED THROUGHOUT THE REPORT PERIOD AT A 790 MWE (NET) LIMITATION DUE TO TURBINE BLADE PROBLEMS. LOAD WAS FURTHER REDUCED ON 03/01/80 FOR CONDUCTING CORE PHYSICS MEASUREMENTS, AND A REACTOR TRIP ALSO OCCURRED ON LOSS OF CONDENSER VACUUM WHEN THE CIRCULATING WATER PUMPS TRIPS AFTER A SALT WATER LEAK SPRAYED THE CIRCULATING WATER ROOM HIGH WATER LEVEL PROTECTIVE CIRCUITRY. THE REACTOR ALSO TRIPPED ON 03/25/80 DUE TO VOLTAGE INSTABILITY ON THE REACTOR TRIP BUS, AND TRIPPED AGAIN ON 03/26/80 DURING STARTUP. BRIEF LOAD REDUCTIONS WERE NECESSARY TO CHECK SALTWATEP LEAKAGE IN THE MAIN CONDENSER AND FOR MINOR MAINTENANCE.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 50, APP B, CRIT 16, CORRECTIVE ACTION WAS NOT PROMPTLY TAKEN TO CORRECT A GROUNDED CONDITION ON THE VITAL 125 VOLT D.C. BUS #21 (SHARED BY UNITS 1 & 2). THIS GROUND WAS DISCOVERED ON 11/5/79 & NOT CORRECTED AS OF 1/29/80 AT WHICH TIME ANOTHER GROUND OCCURRED ON THE 12B REACTOR COOLANT PUMP CONTROL CIRCUIT RESULTING IN AN INADVERTANT STARTING OF THE RCP.
(7922 INFRACTION)

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 6.3.3 REQUIRES THAT TEST PROCEDURES FOR PREVENTATIVE MAINTENANCE PROGRAMS. COOPER NUCLEAR STATION PROCEDURE 1.3 REQUIRES THAT PROCEDURES BE ADHERED TO. CONTRARY TO THE ABOVE, ON DECEMBER 31, 1979, (LER 80-01) OPERATORS FAILED TO PERFORM STEPS IN HPCI SURVEILLANCE PROCEDURE 6.2.2.3.12 THAT RESULTED IN THE HPCI AUXILIARY OIL PUMP BEING LEFT IN THE "PULL-TO-LOCK" POSITION FOR APPROXIMATELY 34 HOURS, RENDERING HPCI INOPERABLE FOR AUTOMATIC INITIATION DURING THAT PERIOD.
(8001 INFRACTION)

TECHNICAL SPECIFICATION 6.3.4 REQUIRES RADIATION CONTROL PROCEDURES TO BE MAINTAINED AND AVAILABLE. RADIATION PROTECTION AND CONTROL PROCEDURES 9.1.1.1, 9.1.2.1 AND 9.1.2.2 REQUIRE THAT CONTAMINATED AREAS BE POSTED WITH SIGNS INDICATING ENTRANCE REQUIREMENS AND THAT STATION EMPLOYEES ABIDE BY THESE PROCEDURAL REQUIREMENTS. ON MARCH 6, 1980, A SIGN ON THE HPCI ROOM DOOR INDICATED THAT PERSONS ENTERING THE AREA SHOULD WEAR PROTECTIVE SHOE COVERS AND GLOVES. CONTRARY TO THE ABOVE, THE NRC INSPECTOR OBSERVED A STATION OPERATOR IN THE HPCI ROOM WITHOUT THE REQUIRED PROTECTIVE CLOTHING.
(8001 DEFICIENCY)

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
		3/1/80	ANNUAL REPORT FOR 1/1/79 - 12/31/79

SUMMARY

INSPECTION SUMMARY

INSPECTION CONDUCTED DECEMBER 3-14, 1979 (79-19): UNANNOUNCED INSPECTION OF WASTE SHIPMENT RECEIVED AT NUCLEAR ENGINEERING COMPANY, RICHLAND, WASHINGTON, DISPOSAL SITE. NO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED.

INSPECTION CONDUCTED JANUARY 29 - FEBRUARY 1, FEBRUARY 5-7, AND FEBRUARY 13-14, 1980 (80-01): UNANNOUNCED INSPECTION OF PLANT OPERATIONS, REVIEW OF NUREG-0578 IMPLEMENTATION, CONTAINMENT VENT AND PURGE, PREPARATIONS FOR REFUELING, NEUTRON MONITORING AND THERMAL LIMITS, SPENT FUEL STORAGE RACKS, SMALL BREAK LOCA PROCEDURES, FOLLOW-UP ON LER'S, IE BULLETINS, CIRCULARS, AND PREVIOUSLY IDENTIFIED UNRESOLVED ITEMS. THE INSPECTION INVOLVED 138 INSPECTION-HOURS ON-SITE BY FOUR (4) NRC INSPECTORS. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE NOTED IN 8 OF THE 10 AREAS INSPECTED. TWO ITEMS OF NONCOMPLIANCE (INFRACTION - FAILURE TO ADHERE TO A SURVEILLANCE PROCEDURE; DEFICIENCY - FAILURE TO WEAR REQUIRED PROTECTIVE CLOTHING WERE NOTED).

INSPECTION CONDUCTED BY REGION V (REPORT NOS. 79-20 AND 80-05) ON DECEMBER 20, 1979 AT RICHLAND, WASHINGTON, AND JANUARY 21, 1980 AT BEATTY, NEVADA. ANNOUNCED INSPECTION OF THE RECEIPT OF WASTE SHIPMENTS AT WASTE DISPOSAL SITES. ONE ITEM OF NONCOMPLIANCE (CATEGORY IV - FAILURE TO HAVE PROPER MARKINGS ON THE OUTSIDE OF THE SHIPPING CASK) WAS IDENTIFIED.

LAST IE SITE INSPECTION DATE: MARCH 31 - APRIL 4, 1980

INSPECTION REPORT NO: 50-302/80-18

SUMMARY

INSPECTION SUMMARY

INSPECTION DECEMBER 10-14 (79-55): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 33 INSPECTOR-HOURS ON SITE IN THE AREAS OF REVIEW OF OPERATIONS, FOLLOWUP OF PREVIOUSLY IDENTIFIED ITEMS, AND FOLLOWUP OF IE BULLETINS. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (IMPROPER MAINTENANCE OF HOUSEKEEPING REQUIREMENTS).

INSPECTION FEBRUARY 11-15 (80-06): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 38 INSPECTOR-HOURS ON SITE IN THE AREAS OF LICENSEE ACTIONS ON PREVIOUS INSPECTOR IDENTIFIED ITEMS, INFRACTIONS AND UNRESOLVED ITEMS, REVIEW OF PLANT OPERATIONS, REVIEW OF TEST AND MEASUREMENT EQUIPMENT AND PLANT TOUR. OF THE FOUR AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 19-22 (80-08): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 26 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, REVIEW OF PREVIOUSLY IDENTIFIED INSPECTOR ITEMS, REVIEW OF IE NOTICES, PLANT HOUSEKEEPING, AND FUEL RECEIPT ACTIVITIES. OF THE FOUR AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 25-28 (80-11): INCLUDED REVIEW OF VITAL AREA ACCESS; COMMUNICATIONS; ALARM STATIONS; DETECTION AIDS; SECURITY ORGANIZATION. THE INSPECTION INVOLVED 35 INSPECTOR-HOURS ON SITE BY ONE NRC INSPECTOR, HOWEVER 25 INSPECTOR-HOURS WERE DEVOTED TO RESPONSE TO THE LICENSEE'S SIGNIFICANT EVENT OF FEBRUARY 26, 1980. THE INSPECTION WAS BEGUN DURING AN OFF-SHIFT PERIOD; THREE INSPECTION HOURS DEVOTED TO THE SECURITY INSPECTION WERE ACCOMPLISHED DURING OFF-SHIFT PERIODS. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN ALL AREAS EXAMINED DURING THE INSPECTION.

INSPECTION FEBRUARY 26 - MARCH 7 (80-14): THIS SPECIAL INSPECTION INVOLVED APPROXIMATELY 1,000 INSPECTOR-HOURS ON SITE IN THE AREAS OF EVALUATION OF THE OPERATIONAL, MAINTENANCE, HEALTH PHYSICS, ENVIRONMENTAL, EMERGENCY PREPAREDNESS, MANAGEMENT CONTROL, AND RECOVERY ASPECTS OF THE NON NUCLEAR INSTRUMENTATION POWER LOSS AND REACTOR TRIP TRANSIENT INVOLVING THE FACILITY ON FEBRUARY 26, 1980. OF THE SEVEN AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SIX AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO FOLLOW EMERGENCY PREPAREDNESS PROCEDURES EM-206 AND EM-207).

REPORTS RECEIVED FROM LICENSEE

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR 50, APPENDIX B, CRITERION VI, DOCUMENT CONTROL STATES THAT "MEASURES SHALL BE ESTABLISHED TO CONTROL THE ISSUANCE OF DOCUMENTS, SUCH AS INSTRUCTIONS, PROCEDURES AND DRAWINGS, INCLUDING CHANGES THERE TO, WHICH PRESCRIBE ALL ACTIVITIES AFFECTING QUALITY." ANSI N18.7 - 1972, PARAGRAPH 5, FACILITY ADMINISTRATIVE POLICIES AND PROCEDURES 2060 "DOCUMENT CONTROL" ALSO STATE THE REQUIREMENTS TO CONTROL THE ISSUANCE OF DOCUMENTS AND THE CHANGES TO BE INCORPORATED THERE TO. CONTRARY TO THE ABOVE, THE INSPECTOR FOUND THAT A NUMBER OF PLANT DRAWINGS WERE NOT BEING KEPT UP-TO-DATE AND OBSOLETE DOCUMENTS ARE NOT BEING PROPERLY CONTROLLED.
(7930 INFRACTION)

10 CFR 50, APPENDIX B, CRITERION XVII STATES THAT RECORDS SHALL BE IDENTIFIABLE AND RETRIEVABLE AND THAT THE APPLICANT SHALL ESTABLISH REQUIREMENTS CONCERNING RECORD RETENTION, SUCH AS DURATION, LOCATION AND ASSIGNMENT OF RESPONSIBILITIES. ANSI N45.2.9 AND AD 1848.04 REQUIRE THAT MEASURES BE ESTABLISHED WHICH ENSURE THAT QUALITY ASSURANCE RECORDS ARE PROPERLY COLLECTED, STORED AND MAINTAINED. CONTRARY TO THE ABOVE, A LIMITED ACCESS LIST WAS NOT ESTABLISHED TO CONTROL ACCESS TO THE STATION CENTRAL FILES AS REQUIRED BY AD 1848.04 AND THE ALLOWABLE OPERATING TRANSIENT CYCLE LOG BOOK WAS NOT KEPT CURRENT.
(7930 DEFICIENCY)

TECHNICAL SPECIFICATIONS 6.5.2.7.E STATES THAT "THE CNRB SHALL REVIEW VIOLATIONS OF CODES, REGULATIONS ORDERS, TECHNICAL SPECIFICATIONS, LICENSE REQUIREMENTS, OR OF INTERNAL PROCEDURES OR INSTRUCTIONS HAVING NUCLEAR SAFETY SIGNIFICANCE. TECHNICAL SPECIFICATION 6.5.2.10.B STATES THAT "REPORTS OF REVIEWS ENCOMPASSED BY SECTION 6.5.2.7 SHALL BE PREPARED, APPROVED AND FORWARDED TO THE EXECUTIVE VICE PRESIDENT, OPERATIONS AND CNRB MEMBERS WITHIN 14 DAYS FOLLOWING COMPLETION OF REVIEW." CONTRARY TO THE ABOVE REQUIREMENTS, THE INSPECTOR FOUND THAT VIOLATIONS OF TECHNICAL SPECIFICATIONS AND REGULATIONS IDENTIFIED IN NRC INSPECTION REPORTS 50-346/79-02, 79-16, 79-19 AND 79-29 WERE NOT REVIEWED BY THE CNRB AS REQUIRED.
(7930 INFRACTION)

TECHNICAL SPECIFICATION 3.7.6.1 REQUIRES TWO INDEPENDENT CONTROL ROOM EMERGENCY VENTILATION SYSTEMS TO BE OPERABLE IN MODES 1, 2, 3 AND 4. THE SURVEILLANCE PORTION OF THAT SPECIFICATION (TS 4.7.6.1.E.3) REQUIRES A MAKEUP FLOW OF 300 CFM PLUS OR MINUS 10% WHEN SUPPLYING THE CONTROL ROOM WITH OUTSIDE AIR. LINEUP FOR CONTROL ROOM EMERGENCY VENTILATION SYSTEM NO. 1 REQUIRES THAT SWITCH HA5261A ON CABINET CDE11C BE IN THE REMOTE POSITION. CONTRARY TO THE ABOVE ON JANUARY 24, 1980, WHILE IN MODE 1, THE INSPECTOR FOUND SWITCH HA5261A ON CABINET CDE11C IN THE LOCAL POSITION. THIS SWITCH ALIGNMENT WOULD HAVE PREVENTED THE CONTROL ROOM EMERGENCY VENTILATION SYSTEM NO. 1 TO BE OPERATED FROM THE CONTROL ROOM TO PROVIDE A SUPPLY OF OUTSIDE AIR.
(8001 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS

+ Power was administratively maintained at approximately 72% due to a degraded pump shaft seal on reactor coolant pump (RCP) 1-1 and as a cycle stretchout to meet the fuel burnup window for the April 10, 1980 refueling outage. On March 23, 1980 due to further degradations of RCP 1-1 shaft seals, the pump was shut down and operation continued with 3 RCP's. The reactor was manually tripped on March 27, when one group of safety rods dropped into the core due to a power supply failure. (Returned to operation on March 30, 1980)

+LAST IE SITE INSPECTION DATE: January 14-18, 1980

+ INSPECTION REPORT NO: 80-02

SUMMARY

INSPECTION SUMMARY

+ Inspection on January 2-4, 7-11, 14-18, 21-25, 29-31; February 1, (80-01): A routine, unannounced inspection of follow up on previous inspection findings, plant operations, physical protection (security organization, physical barriers, access control, communications), follow up of licensee event reports, follow up of IE Bulletins, follow up of IE Circulars and General Station Training. The inspection involved 185 inspector hours onsite by the Resident Inspector. Of the 10 areas inspected, no items of noncompliance or deviations were found in nine areas; one item of noncompliance was identified in the other area (improper switch lineup in the Control Room Emergency Ventilation System).

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
80-10/ 01T-0	02/14/80	02/26/80	14 Day LER	Design deficiency on two reactor coolant hot leg pipe whip restraints at top of reactor coolant system hot leg.
80-13/ 03L-0	02/08/80	03/06/80	30 Day LER	Control rod absolute position indication was not responding.
80-14/ 03L-0	02/08/80	03/06/80	30 Day LER	Pressurizer sample system containment isolation valve would not close.
80-15/ 03L-0	02/10/80	03/07/80	30 Day LER	Control rod API declared inoperable due to asymmetric rod alarms.
80-18/ 03L-0	02/26/80	03/25/80	30 Day LER	BWST level indication reading higher than other channels.

+ Inspection on January 14-18, (80-02): Included a review of Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Lighting; Access Control (Identification, Authorization and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Control); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys, and Combinations; Records and Reports; Followup on Previous Items of Noncompliance; Followup on IE Bulletin No. 79-16. The inspection involved 133.5 inspector hours onsite by two NRC inspectors and one assistant. The inspection began during the day shift period; 39 inspection hours were accomplished during offshift periods. The licensee was found to be in compliance with NRC requirements within the 20 areas examined during this inspection except, for the following 9 items: (A) Access Control (Vital Areas) - Failure to adequately and effectively control access in accordance with security plan requirements; (B) Alarm Stations - Failure of the alarm stations to have adequate alarm monitoring capabilities; (C) Detection Aids - A portion of the active intrusion detection alarm system is not tamper-indicating; (D) Testing and Maintenance - The licensee failed to conduct proper tests of special purpose detectors; (E) Alarm Stations - Failure to provide an alarm subsystem in accordance with a security plan commitment; (F) Communications - Several redundant security communication systems were not properly secured; (G) Detection Aids - An inspector was able to circumvent intrusion detection sensors in certain areas; (H) Access Control (Identification Authorization, and Badging) - The licensee failed to log the entry of certain personnel according to procedure; (I) Access Control (Search) - The licensee failed to conduct adequate searches in accordance with security plan commitments.

FACILITY DATA

Facility Description

1. Location (state/county) (nearest population center): Illinois/Grundy 9 miles E of Morris
2. Electric Reliability Council: Mid-America Interpool Network
3. Type of Reactor: BWR
4. Power Level (MWT): 2527
5. Design Electrical Rating (MWE Net): 794
6. Date of Initial Criticality: January 7, 1970
7. Date of Commercial Operation: JULY, 1970
8. Condenser Cooling Method: Cooling Lake
9. Condenser Cooling Water Source: Kankakee and Des Plaines Rivers

Utility & Contractor Information

10. Licensee: Commonwealth Edison Co.
11. Corporate Address: P. O. Box 767, Chicago, Illinois 60690
12. Corporate Contact: C. Reed
13. Architect/Engineer: Sargent & Lundy
14. Nuclear Steam Supply System: GE
15. Constructor: United Engineers & Constructors, Inc.

Regulatory Information

16. IE Region responsible: III
17. IE Branch Chief: R. Heishman
18. IE Senior Inspector: R. Spessard
19. IE Resident Inspector: J. L. Barker (815)-942-9267
20. Licensing Project Manager: S. J. Nowicki
21. Docket Number: 50-237
22. License Number/Date of Issue: DPR-19 issued 12/22/69
23. Public Document Room: Morris Public Library, 604 Liberty Street, Morris, Illinois 60451

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 6.2 REQUIRES THAT LICENSEE PROCEDURES BE ADHERED TO. PROCEDURE DRP 1520-1, SECTION F.2, REQUIRES THAT A RADIOACTIVE MATERIAL SHIPMENT RECORD BE COMPLETED AS SPECIFIED IN APPENDIX I OF DRP 1520-01 FOR OFFSITE SHIPMENTS OF RADIOACTIVE MATERIAL. CONTRARY TO THE ABOVE, THE RADIOACTIVE MATERIAL SHIPMENT RECORD SPECIFIED IN APPENDIX I OF DRP 1520-01 WAS NOT COMPLETED FOR RADWASTE SHIPMENTS MADE BETWEEN JANUARY 1, 1979 AND NOVEMBER 28, 1979. (7927 DEFICIENCY)

+LAST IE SITE INSPECTION DATE: January 7 through February 1, 1980

+ INSPECTION REPORT NO: 80-03

SUMMARY

INSPECTION SUMMARY

+ Inspection on January 7 through February 1, (80-03): Routine, unannounced resident inspection of maintenance activities; plant operations; physical protection - security organization, physical barriers, access control (identification, authorization, badging, search, and escorting) and communications; surveillance of safety-related systems/components required by technical specifications; IE Bulletin followup; IE Circular followup; review and audits; preparation for refueling; receipt of new fuel; and followup on headquarters requests. The inspection involved 132 inspector hours onsite by two NRC inspectors. No items of noncompliance were identified.

INSPECTION STATUS

ENFORCEMENT STATUS

10 CFR, PART 50, APPENDIX B, CRITERION II STATES THAT "THIS PROGRAM SHALL BE DOCUMENTED BY WRITTEN POLICIES, PROCEDURES, OR INSTRUCTIONS AND SHALL BE CARRIED OUT THROUGHOUT PLANT LIFE IN ACCORDANCE WITH THOSE POLICIES, PROCEDURES." QAD 1301.3 REQUIRES MANAGERIAL REPORTING OF QA PROGRAM STATUS UTILIZING MONTHLY AUDIT STATUS REPORTS WHICH INCLUDE REPORTS ON ACTIVITIES HAVING SIGNIFICANT IMPACT ON PLANT QUALITY TRENDS. QAP 1405.2 REQUIRES THAT THE STATUS REPORTS INCLUDE MAJOR NONCONFORMANCES, CORRECTIVE ACTIONS, AND RESULTS OF AUDITS. CONTRARY TO THE ABOVE, A REVIEW OF STATUS REPORTS REVEALED THAT THE REPORTS DID NOT INCLUDE ACTIVITIES AND FINDINGS HAVING SIGNIFICANT IMPACT ON PLANT QUALITY TRENDS.
(7925 DEFICIENCY)

10 CFR, PART 50, APPENDIX B, CRITERION II STATES THAT "THIS (QUALITY ASSURANCE) PROGRAM SHALL BE DOCUMENTED BY WRITTEN POLICIES, PROCEDURES, OR INSTRUCTIONS AND SHALL BE CARRIED OUT THROUGHOUT PLANT LIFE IN ACCORDANCE WITH THOSE POLICIES, PROCEDURES, OR INSTRUCTIONS." ACD 1311.1 REQUIRES THAT THE SURVEILLANCE PROGRAM IDENTIFY ALL SURVEILLANCE TESTS AND CONTROL THEIR PERFORMANCE, EVALUATION OF RESULTS AND RECORDS. CONTRARY TO THE ABOVE, THE PROCEDURE COVERING SURVEILLANCE REQUIREMENT 4.6.A.1 IS NOT ADDRESSED, CONTROLLED OR TREATED AS A SURVEILLANCE REQUIREMENT AS REQUIRED BY ACD 1311.1
(7925 DEFICIENCY)

10 CFR PART 50, APPENDIX B, CRITERION II STATES THAT "THIS (QUALITY ASSURANCE) PROGRAM SHALL BE DOCUMENTED BY WRITTEN POLICIES, PROCEDURES, OR INSTRUCTIONS AND SHALL BE CARRIED OUT THROUGHOUT PLANT LIFE IN ACCORDANCE WITH THOSE POLICIES, PROCEDURES, OR INSTRUCTIONS." ADMINISTRATIVE CONTROL PROCEDURE (ACP) 1402.3 "PROCEDURE/INSTRUCTION REVIEW AND APPROVAL" REQUIRES THAT SPECIAL TEST PROCEDURES BE REVIEWED AND APPROVED BY SEVERAL PLANT PERSONNEL AT LEAST THE OPERATIONS COMMITTEE INCLUDING THE REACTOR AND PLANT PERFORMANCE ENGINEER. CONTRARY TO THE ABOVE, SPECIAL TEST PROCEDURE NO. 55, FEBRUARY 22, 1979, WAS NOT REVIEWED AND APPROVED BY THE REACTOR AND PLANT PERFORMANCE ENGINEER.
(7925 DEFICIENCY)

10 CFR, PART 50, APPENDIX B, CRITERION II STATES THAT "THE APPLICANT SHALL IDENTIFY THE STRUCTURES, SYSTEMS, AND COMPONENTS TO BE COVERED BY THE QUALITY ASSURANCE PROGRAM." QAD 1301.4, REV. 3, 4/2/79 STATES THAT "LISTS OF SAFETY RELATED STRUCTURES SYSTEMS AND COMPONENTS...SHALL BE PREPARED" AND THAT "A SYSTEM SHALL BE ESTABLISHED FOR DISTRIBUTION AND CONTROL OF THE SAFETY RELATED LIST." CONTRARY TO THE ABOVE, AN OFFICIAL SAFETY RELATED LIST HAD NOT BEEN ISSUED FOR USE AND PROCEDURES CONTROLLING THE SAFETY RELATED LIST DID NOT EXIST.
(7925 DEFICIENCY)

10 CFR 50, APPENDIX B, CRITERION V, STATES THAT ACTIVITIES AFFECTING QUALITY SHALL BE ACCOMPLISHED IN ACCORDANCE WITH INSTRUCTIONS, PROCEDURES, OR DRAWINGS. CONTRARY TO THE ABOVE, ACP 1401.4 AND 1404.5 WERE NOT ADHERED TO AS REQUIRED. (A) SAFETY-RELATED MAINTENANCE ACTIVITY REQUESTS WERE NOT INITIALED BY THE ORIGINATOR'S SUPERVISOR AS REQUIRED BY SECTION 6.3 OF ACP 1401.4 "CONTROL OF PLANT WORK." AND (B) HOLD-OFF TAG PLACEMENT ON TWO SAFETY-RELATED VALVES, DURING REPAIRS OF A LEAK ON THE HPCI/RCIC DRAIN TO THE MAIN CONDENSER, WAS NOT VERIFIED BY THE INDIVIDUAL OR RESPONSIBLE SUPERVISOR AS REQUIRED BY ACP 1404.5 "HOLD-OFF PROCEDURE."
(7925 INFRACTION)

10 CFR 50, APPENDIX B, CRITERION VI STATES THAT MEASURES SHALL ASSURE THAT DOCUMENTS SUCH AS DRAWINGS ARE DISTRIBUTED TO AND USED AT THE LOCATION WHERE THE PRESCRIBED ACTIVITY IS PERFORMED. QAP 1306.1, SECTION 5.6 REQUIRES THAT ALL DESIGN DOCUMENTS SHALL BE CONTROLLED AS NECESSARY TO PRECLUDE THE USE OF OUTDATED OR INAPPROPRIATE DOCUMENTS. CONTRARY TO THE ABOVE, TWO DRAWINGS IN THE CONTROL ROOM STAMPED "CONTROLLED DOCUMENT" WERE FOUND TO BE OUT OF DATE.
(7925 INFRACTION)

10 CFR 50.59 STATES THAT "THE LICENSEE SHALL ALSO MAINTAIN RECORDS OF TESTS AND EXPERIMENTS CARRIED OUT PURSUANT TO PARAGRAPH (A) OF THIS SECTION. THESE RECORDS SHALL INCLUDE A WRITTEN SAFETY EVALUATION WHICH PROVIDES THE BASIS FOR THE DETERMINATION THAT THE CHANGE, TEST OR EXPERIMENT DOES NOT INVOLVE AN UNREVIEWED SAFETY QUESTION." TECHNICAL SPECIFICATION 6.5.2.7 REQUIRES THE SAFETY COMMITTEE TO REVIEW: "A. THE SAFETY EVALUATIONS FOR (1) CHANGES TO PROCEDURES AND (2) TESTS OR EXPERIMENTS COMPLETED UNDER THE PROVISIONS OF SECTION 50.59, 10 CFR TO VERIFY THAT SUCH ACTIONS DID NOT CONSTITUTE AN UNREVIEWED SAFETY QUESTION... C. PROPOSED TESTS OR EXPERIMENTS WHICH INVOLVE AN UNREVIEWED SAFETY QUESTION AS DEFINED IN SECTION 50.59, 10 CFR." CONTRARY TO THE ABOVE, WHEN SPECIAL TEST PROCEDURE NO. 25 WAS REVIEWED BY THE OPERATIONS COMMITTEE AND FORWARDED TO THE SAFETY COMMITTEE, NEITHER THE MINUTES, NOR THE "SAFETY ANALYSIS" SECTION OF THE PROCEDURE RECORD ANY BASIS FOR A DETERMINATION NOR IS ANY CONCLUSION DOCUMENTED. MINUTES FROM SAFETY COMMITTEE MEETING NO. 115 ONLY STATE THAT IT WAS "REVIEWED AND APPROVED."
(7925 DEFICIENCY)

REPORTS RE[illegible]ED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-40/ 03L-0	10/10/79	02/22/80	30 Day LER	During daily surveillance testing the suppression chamber oxygen concentration was found to be 4.3%.
80-01/ 01T-0	01/24/80	02/07/80	14 Day LER	While performing daily surveillance on the containment atmospheric dilution system oxygen analyzers, AN-8181A sensing element was found to be flooded with apparent condensation from the sample line and was inoperable.
80-02/ 01T-0	02/06/80	02/20/80	14 Day LER	Fire watch removed with CO-2 system OOS.
80-04/ 01T-0	02/14/80	03/11/80	14 Day LER	Seat leakage on the inboard and combined seat and stem leakage on the outboard valves in excess of the 11.5 SCFH limit.
80-05/ 03L-0	02/05/80	03/06/80	30 Day LER	The RCIC system condensate pump would not pump down the RCIC turbine barometric condensor and pump space heaters tripped.
80-09/ 01T-0	03/04/80	03/18/80	14 Day LER	A section of split ring was lodged in impeller of main HPCI pump.

+ 100% POWER OPERATION.

+ LAST IE SITE INSPECTION DATE: MARCH 3-28, 1980

+ INSPECTION REPORT NO: 50-348/80-11

SUMMARY

INSPECTION SUMMARY

+ INSPECTION DECEMBER 31 - FEBRUARY 1 (80-02): THIS ROUTINE INSPECTION INVOLVED 50 INSPECTOR-HOURS ON SITE IN THE AREAS OF PLANT OPERATIONS, PREVIOUSLY IDENTIFIED ITEMS OF NONCOMPLIANCE, UNRESOLVED, AND OPEN ITEMS, IE CIRCULAR AND IE BULLETINS; LICENSEE EVENT REPORTS; UNIT 1 PLANT TOURS, AND PHYSICAL SECURITY. OF THE EIGHT AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN SEVEN AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY INVOLVING FAILURE TO FOLLOW PROCEDURES IN COMPLETING EQUIPMENT TAGGING FORMS FOR MAINTENANCE).

INSPECTION FEBRUARY 26-29 (80-03): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 29 INSPECTOR-HOURS ON SITE IN THE AREAS OF FIRE PROTECTION/PREVENTION. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 19-22 (80-05): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 58 INSPECTOR-HOURS ON SITE IN THE AREAS OF SMALL BREAK LOSS OF COOLANT PROCEDURES AND TRAINING. WITHIN THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
80-006/03L-0	01/26/80	02/25/80	30 DAY LER	CONTAINMENT AIR PARTICULATE MONITOR DECLARED INOPERABLE WHEN FILTER PAPER WOULD NOT ADVANCE DUE TO CARBON DUST FOULING FROM CARBON VANE VACUUM PUMP.
80-008/03L-0	02/03/80	02/25/80	30 DAY LER	COMPONENT COOLING WATER SNUBBER CW4-R121 DECLARED INOPERABLE WHEN RESERVOIR LINE DISCONNECTED SNUBBER PURGED/VENTED AND LINE RECONNECTED.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO ETS 2.2.3, AN UNCONTROLLED RELEASE OF REGENERATION WASTE WATER WITH AN ESTIMATED PH RANGE OF 4.0 TO 9.1 WAS DISCHARGED INTO THE DISCHARGE TUNNEL.
(8001 DEFICIENCY)

CONTRARY TO TS 3.3.A.2.A & 4.3.A.2.D, PARTIALLY INSERTED CONTROL ROD 18-35 WAS MADE INOPERABLE W/O EITHER FULLY INSERTING THE CONTROL ROD OR PERFORMING A SHUTDOWN MARGIN TEST PRIOR TO MAKING THE CONTROL ROD INOPERABLE.
(8001 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

An approximate 6 inch pipe crack has developed on the suction line to condensate booster pump B. A temporary fix has been made. The offgas system recombiner is out of service which has resulted in higher than normal stack releases.

FACILITY ITEMS (PLANS AND PROCEDURES):

+ Refueling outage scheduled to begin May 3, 1980.

MANAGERIAL ITEMS:

+ The Resident Manager position was filled on April 1, 1980. The Superintendent of Power position is presently being filled by qualified acting personnel until a final selection has been made.

PLANT STATUS:

+ The plant is operating at near full power with an average offgas rate at the SJAE of 10,000 microcuries per second and an average stack release rate of 2500 microcuries per second.

+ LAST IE SITE INSPECTION DATE: 4/11/80

+ INSPECTION REPORT NO: 50-333/80-05

SUMMARY

INSPECTION SUMMARY

+ None

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
80-007/03L	01/09/80	02/08/80	30 Day LER	RHR loop B made inoperable due to pipe hanger failure
80-008/03L	01/09/80	02/08/80	30 Day LER	Core spray injection valve failed to open during surveillance testing due to torque and limit switch misadjustment
80-009/03L	01/10/80	02/08/80	30 Day LER	Diesel fire pump made inoperable to correct engine cooling system problem
80-010/03L	01/11/80	02/09/80	30 Day LER	Recirculation loop temperature instruments were found to be out of calibration due to personnel error in performing the previous calibration
80-011/03L	01/10/80	02/09/80	30 Day LER	Hudraulic snubber was found to be inoperative during surveillance testing. Snubber was replaced with a spare
80-012/03L	01/11/80	02/09/80	30 Day LER	Emergency diesel generator A tripped on low oil pressure during surveillance testing
80-013/03L	01/14/80	02/12/80	30 Day LER	Reactor lo-lo-lo level switch A did not operate properly during surveillance testing. Replaced with new switch
80-014/03L	01/16/80	02/12/80	30 Day LER	Torus water exceeded TS limits during HPCI testing. Level variance now permitted by TS during similar testing
80-015/03L	01/23/80	02/19/80	30 Day LER	Failure of LPCI independent power supply "A" inverter
80-016/03L	01/25/80	02/22/80	30 Day LER	Failure of drywell floor drain sump inboard isolation valve 20-MOV-82 due to a grounding situation caused by flooding the MOV terminal box
80-017/03L	01/30/80	02/25/80	30 Day LER	Drywell to torus differential pressure decreased to less than 1.7 PSID for about 1 hr. due to reactor building cooling
80-018/03L	02/01/80	02/25/80	30 Day LER	Core spray system pipe break detector out of calibration due to change in Tech Spec
80-019/03L	02/05/80	02/29/80	30 Day LER	Rod sequence control system did not come into service as required during plant shutdown due to calibration procedure error
80-020/04L	02/05/80	03/05/80	30 Day LER	Plant stack gas monitoring system inoperable due to freezing
80-021/03L	02/07/80	03/06/80	30 Day LER	Intermediate range monitor B made inoperable to repair a connector
80-022/03L	02/08/80	03/07/80	30 Day LER	Drywell atmosphere monitor A was made inoperable while B was out of service resulting in operation in a degraded mode
80-023/03L	02/11/80	03/11/80	30 Day LER	Reactor water chemistry sample for chlorides out of specification
80-024/03L	02/13/80	03/14/80	30 Day LER	HPCI steam isolation valve closed due to spurious isolation signal. Problem traced to loose wire on high area temperature thermocouple switch

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 20.203(F), CONTAINERS CONTAINING SOLIDIFIED AND COMPACTED RADIOACTIVE WASTE, STORED IN A WORKING AREA OF THE AUXILLIARY BUILDING WERE NOT LABELED WITH A LABEL CLEARLY IDENTIFYING THEIR RADIOACTIVE CONTENTS AT THE TIME OF THE INSPECTION. THIS IS A DEFICIENCY.
(8004 DEFICIENCY)

CONTRARY TO TECHNICAL SPECIFICATION 5.11.2, VERY HIGH RADIATION AREAS WITHIN CONTAINMENT WERE (1) NOT BARRICADED AND CONSPICUOUSLY POSTED AND (2) PERSONNEL WERE ALLOWED ACCESS TO THESE AREAS WITHOUT A RADIATION MONITORING DEVICE OR UNDER THE POSITIVE CONTROL OF A PERSON QUALIFIED IN RADIATION PROTECTION PROCEDURES AT THE TIME OF INSPECTION. THIS IS AN INFRACTION.
(8004 INFRACTION)

CONTRARY TO TECHNICAL SPECIFICATION 5.11.1, HIGH RADIATION AREAS WITHIN CONTAINMENT WERE (1) NOT BARRICADED AND CONSPICUOUSLY POSTED AND (2) PERSONNEL WERE ALLOWED ACCESS TO THESE AREAS WITHOUT A RADIATION MONITORING DEVICE OR UNDER THE POSITIVE CONTROL OF A PERSON QUALIFIED IN RADIATION PROTECTION PROCEDURES AT THE TIME OF INSPECTION. THIS IS AN INFRACTION.
(8004 INFRACTION)

CONTRARY TO 10 CFR 19.11(A) OR (B), NEITHER THE DOCUMENTS REQUIRED BY 10 CFR 19.11(A) NOR THE NOTICE REQUIRED BY 10 CFR 19.11(B) WERE POSTED AT THE TIME OF INSPECTION. THIS IS A DEFICIENCY.

SUMMARY

INSPECTION SUMMARY

INSPECTION ON FEBRUARY 12-15, 1980 (80-04): ROUTINE, UNANNOUNCED INSPECTION OF THE LICENSEE'S RADIATION PROTECTION PROGRAM DURING REFUELING OPERATIONS INCLUDING HEALTH PHYSICS PROCEDURES; ADVANCED PLANNING; TRAINING; INTERNAL AND EXTERNAL EXPOSURE CONTROL; SURVEYS; CONTROL OF RADIOACTIVE MATERIAL; RESPIRATORY PROTECTION PROGRAM; AND A TOUR OF FACILITIES INVOLVED IN REFUELING. THE INSPECTOR ALSO INCLUDED AN INVESTIGATION INTO AN ALLEGATION OF DEFICIENCIES IN THE LICENSEE'S TRAINING PROGRAM. OF THE EIGHT (8) AREAS INSPECTED, FOUR ITEMS OF NONCOMPLIANCE WERE IDENTIFIED IN ONE AREA: (1) FAILURE TO BARRICADE AND CONTROL HIGH RADIATION AREAS, AN INFRACTION, (2) FAILURE TO BARRICADE AND CONTROL VERY HIGH RADIATION AREAS, AN INFRACTION, (3) FAILURE TO LABEL CONTAINERS CONTAINING RADIOACTIVE MATERIAL - A DEFICIENCY; (4) FAILURE TO POST DOCUMENTS REQUIRED BY 10 CFR 19.11, A DEFICIENCY. THREE OPEN ITEMS WERE IDENTIFIED DURING THE INSPECTION.

INSPECTION ON MARCH 5-7, 1980 (80-06): FACILITY ORGANIZATION AND OPERATION MEASUREMENTS AND CONTROLS, INVENTORY AND INVENTORY VERIFICATIONS, SHIPPING AND RECEIVING, STORAGE AND INVENTORY CONTROLS, RECORDS AND REPORTS AND MANAGEMENT OF MATERIAL CONTROL SYSTEM. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS IN THE SEVEN AREAS EXAMINED DURING THE INSPECTION.

INSPECTION ON FEBRUARY 12-15, 1980 (80-05): ROUTINE, UNANNOUNCED INSPECTION OF THE LICENSEE'S SECURITY ORGANIZATION. INCLUDED REVIEW OF SECURITY PLAN; SECURITY ORGANIZATION; PHYSICAL BARRIERS (PROTECTED AREA); PHYSICAL BARRIERS (VITAL AREAS); LIGHTING; ALARM STATIONS; DETECTION AIDS; ASSESSMENT AIDS; COMPENSATORY MEASURES; LOCKS, KEYS, AND COMBINATIONS; RECORDS AND REPORTS.

INSPECTION ON MARCH 24-27, 1980 (80-07): ROUTINE, UNANNOUNCED INSPECTION OF THE LICENSEE'S (1) RESPONSE TO OPEN AND UNRESOLVED ITEMS; (2) LICENSEE EVENT REPORTS; (3) RESPONSE TO INSPECTION AND ENFORCEMENT BULLETINS; (4) PROGRESS ON NUREG-0578; AND (5) REVIEW OF THE LICENSEE'S TURBINE INSPECTION. OF THE FIVE (5) AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO CRITERION VI OF APPENDIX B TO 10 CFR 50, THE LICENSEE PERFORMED TECHNICAL SPECIFICATION CALIBRATIONS USING OUTDATED PROCEDURE REVISIONS. EXAMPLE: PROCEDURE 5.4.1.3.2D-R WAS PERFORMED UNDER REVISION 13 ON 3/19/79 WHEN REVISION 15 WAS ISSUED EFFECTIVE 2/28/79.
(8002 INFRACTION)

TECH SPEC AC7.4 REQUIRES THAT WRITTEN PROCEDURES BE IMPLEMENTED. FSV ADMINISTRATIVE PROCEDURE ADM-13 REQUIRES THAT PROCEDURES BE ADHERED TO. IN PARTICULAR THAT TEST EQUIPMENT BE IDENTIFIED IN SECTION 3.0 OF SURVEILLANCE PROCEDURES. CONTRARY TO THE ABOVE, THE TEST CONDUCTOR FAILED TO IDENTIFY THE TEST EQUIPMENT USED DURING THE PERFORMANCE OF LINEAR POWER CHANNEL SCRAM CALIBRATION SURVEILLANCE TEST SR 5.4.1.1.4C-D FOR THE DATES OF JAN 5-8/80.
(8002 DEFICIENCY)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

Areas related to potential equipment modification, which are under review and discussion with the NRC include: helium circulator auxiliaries; accident analysis relating to outlet temperature dispersion and orifice settings; hangers for 2" and smaller piping; and plant oscillations.

FACILITY ITEMS (PLANS AND PROCEDURES):

+ IMPLEMENTATION OF 10 CFR 73.55 PROVISIONS WERE IN EFFECT 3/21/80.

MANAGERIAL ITEMS:

PLANT STATUS:

+ PLANT STARTED POWER OPERATIONS.

LAST IE SITE INSPECTION DATE: FEBRUARY 27, - FEBRUARY 29, 1980 +

INSPECTION REPORT NO: 50-267/80-05 +

NRC POWER RESTRICTIONS: Restricted to 70% of Licensed Thermal Power.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	SUBJECT
80-06 03-L0	2/18/80	3/19/80	HYDRAULIC SNUBBER VSS-117 INOPERABLE - LCO 43.10
80-07 03-L0	2/19/80	3/18/80	TWO OF TWELVE HELIUM CIRCULATOR SEAL MALFUNCTION PRESSURE DIFFERENTIAL SWITCHES OUTSIDE LIMITS SPECIFIED BY LCO 4.4.1

SUMMARY

INSPECTION SUMMARY

+ INSPECTION FEBRUARY 1-29, 1980 (80-02): ROUTINE, ANNOUNCED INSPECTION OF EVENT REPORTS, CALIBRATION, SURVEILLANCE, BULLETINS/CIRCULARS, MAINTENANCE, PHYSICAL SECURITY, PLANT OPERATIONS, FOLLOWUP ON ITEMS OF NONCOMPLIANCE, FOLLOWUP ON INSPECTOR IDENTIFIED AND UNRESOLVED PROBLEMS, EMERGENCY PLANNING, CORE SAFETY LIMIT, AND REPORT REVIEWS. WITHIN THE TEN (10) AREAS INSPECTED, TWO ITEMS OF NONCOMPLIANCE WERE IDENTIFIED (INFRACTION - FAILURE TO USE LATEST PROCEDURE REVISIONS WHILE PERFORMING CALIBRATION, AND DEFICIENCY - FAILURE TO PROVIDE A RECORD OF TEST EQUIPMENT).

INVESTIGATION ON JANUARY 28-30, 1980 (80-08): SPECIAL INVESTIGATION OF ALLEGED IRREGULAR SECURITY PRACTICES OF THE STANLEY SMITH SECURITY SYSTEM, INC., CONTRACT SERVICES. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED. THE ALLEGATIONS WERE NOT SUBSTANTIATED.

INSPECTION ON FEBRUARY 11-12, 1980 (80-04): SCHEDULED ROUTINE MANAGEMENT MEETING TO REVIEW THE LICENSEE'S ENFORCEMENT HISTORY, DISCUSS REPORTABLE OCCURRENCES, REVIEW THE STATUS OF LICENSEE'S RESPONSES TO IE BULLETINS AND CIRCULARS, DISCUSS THE INSPECTION PROGRAM CONDUCTED BY THE OFFICE OF INSPECTION AND ENFORCEMENT, AND REVIEW CURRENT ITEMS OF CONCERN TO THE REGIONAL OFFICE STAFF. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION ON FEBRUARY 27-29, 1980 (80-05): ROUTINE, ANNOUNCED INSPECTION OF THE LICENSEE'S EMERGENCY PLANNING PROGRAM INCLUDING COORDINATION WITH OFFSITE AGENCIES, FACILITIES, SUPPLIES, EQUIPMENT, EMERGENCY PLAN AND PROCEDURES, TRAINING, TESTS, AND DRILLS AND INTERNAL AUDITS. THE INSPECTOR OBSERVED THE EMERGENCY DRILL ON FEBRUARY 28, 1980. NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION TABLES 4.1-1 (ITEM 3) AND 4.2-7 (ITEM 2), THE INTERMEDIATE RANGE MONITORS (IRM) ARE TO BE FUNCTIONALLY TESTED IN ORDER TO ASSURE OPERABILITY. AS DESCRIBED BY TECHNICAL SPECIFICATION, SECTION 1.0, DEFINITIONS, A CHANNEL FUNCTIONAL TEST INJECTS A SIMULATED SIGNAL INTO THE CHANNEL SENSOR TO VERIFY CHANNEL OPERABILITY INCLUDING ALARM AND/OR TRIP FUNCTIONS AND CHANNEL FAILURE TRIPS. CONTRARY TO THE ABOVE, IRM CHANNELS ARE NOT BEING FUNCTIONALLY TESTED TO ASSURE OPERABILITY OF ALL ALARMS, TRIPS AND INDICATIONS FROM THE SENSOR TO PANEL H11-P603 IN THE CONTROL ROOM.

LAST IE SITE INSPECTION DATE: MARCH 26-28, 1980

INSPECTION REPORT NO: 50-321/80-16

SUMMARY

INSPECTION SUMMARY

INSPECTION JANUARY 28-31 (80-05): THIS ROUTINE UNANNOUNCED INSPECTION INVOLVED 26 INSPECTOR-HOURS ON SITE. THE AREAS INSPECTED WERE MEASUREMENTS OF CORE PERFORMANCE ON UNITS 1 AND 2, RESPONSE TO LERS ON BOTH UNITS, INITIAL STARTUP TESTS FOR UNIT 2 AND FOLLOWUP ON AN EARLIER UNRESOLVED ITEM. OF THE FOUR AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS. ONE APPARENT ITEM OF NONCOMPLIANCE WAS IDENTIFIED IN ONE AREA (INFRACTION - FAILURE TO PERFORM CHANNEL FUNCTIONAL TEST). ONE APPARENT DEVIATION WAS FOUND IN ONE AREA (FAILURE TO CONFORM TO A COMMITMENT FOR CORRECTIVE ACTION MADE IN AN LER).

INSPECTION FEBRUARY 19-21 (80-96): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 23 INSPECTOR-HOURS ON SITE IN THE AREAS OF SMALL BREAK LOSS OF COOLANT ACCIDENT PROCEDURES AND TRAINING. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA. ONE DEVIATION WAS FOUND IN ONE AREA (DEVIATION - FAILURE TO ENSURE THE STATIONS LICENSED OPERATORS HAVE COMMITTED TO MEMORY THE IMMEDIATE ACTIONS OF THE FACILITY'S EMERGENCY PROCEDURES).

INSPECTION FEBRUARY 21-22 (80-08): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 5 INSPECTOR-HOURS ON SITE IN THE AREAS OF FOLLOWUP ON ITEMS OR NONCOMPLIANCE RELATIVE TO 10 CFR PART 21. THE PREVIOUSLY IDENTIFIED ITEMS OF NONCOMPLIANCE IDENTIFIED IN IE REPORTS 50-321/79-33 AND 50-366/79-37 REMAIN OPEN.

INSPECTION JANUARY 5 - FEBRUARY 2 (80-10): THIS INSPECTION INVOLVED 45 INSPECTOR-HOURS ON SITE OF TECHNICAL SPECIFICATION COMPLIANCE, REPORTABLE OCCURRENCES, HOUSEKEEPING, OPERATOR PERFORMANCE, OVERALL PLANT OPERATIONS, QUALITY ASSURANCE PRACTICES, STATION AND CORPORATE MANAGEMENT PRACTICES, CORRECTIVE AND PREVENTATIVE MAINTENANCE ACTIVITIES, SITE SECURITY PROCEDURES, RADIATION CONTROL ACTIVITIES, SURVEILLANCE ACTIVITIES, AND FOLLOWUP OF PREVIOUS INSPECTION FINDINGS. OF THE TWELVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

REPORTS RECEIVED FROM LICENSEE

INSPECTION STATUS

ENFORCEMENT STATUS

AS REQUIRED BY TECHNICAL SPECIFICATION TABLES 4.1-1 (ITEM 3) AND 4.2-7 (ITEM 2), THE INTERMEDIATE RANGE MONITORS (IRM) ARE TO BE FUNCTIONALLY TESTED IN ORDER TO ASSURE OPERABILITY. AS DESCRIBED BY TECHNICAL SPECIFICATION, SECTION 1.0, DEFINITIONS, A CHANNEL FUNCTIONAL TEST INJECTS A SIMULATED SIGNAL INTO THE CHANNEL SENSOR TO VERIFY CHANNEL OPERABILITY INCLUDING ALARM AND/OR TRIP FUNCTIONS AND CHANNEL FAILURE TRIPS. CONTRARY TO THE ABOVE, IRM CHANNELS ARE NOT BEING FUNCTIONALLY TESTED TO ASSURE OPERABILITY OF ALL ALARMS, TRIPS AND INDICATIONS FROM THE SENSOR TO PANEL H11-P603 IN THE CONTROL ROOM.
(8005 INFRACTION)

ON THREE SEPARATE OCCASIONS DURING 1979, AS DOCUMENTED IN LERS 79-087, 79-107 AND 79-121, AVERAGE PLANAR LINEAR HEAT GENERATION RATES WERE EXCEEDED SHORTLY AFTER REACTOR POWER WAS RETURNED TO 100% FOLLOWING A MINOR LOAD REDUCTION TO PERFORM WEEKLY SURVEILLANCE TESTS OR TO CORRECT EQUIPMENT PROBLEMS. DUE TO THE REPETITIVE NATURE AND CIRCUMSTANCES SURROUNDING THESE EVENTS, THE LICENSEE COMMITTED TO THE NRC IN LER 79-107 DATED OCTOBER 22, 1979 THAT THE FACILITY WOULD REVISE ITS PROCEDURES WITHIN THIRTY DAYS TO INSTRUCT OPERATIONS PERSONNEL ON THE CORRECT ACTIONS TO TAKE ON INCREASING POWER FOLLOWING A LOAD REDUCTION OF SHORT DURATION. CONTRARY TO THE ABOVE, ON JANUARY 31, 1980, THE INSPECTOR DISCOVERED THAT THE COMMITTED CHANGES HAD NOT BEEN PERFORMED.
(8005 DEVIATION)

INSPECTION STATUS

PLANT STATUS:

+ PLANT IS SHUTDOWN FOR MAINTENANCE UNTIL APRIL 19, 1980.

+ LAST IE SITE INSPECTION DATE: MARCH 26-28, 1980

+ INSPECTION REPORT NO: 50-366/80-16

SUMMARY

INSPECTION SUMMARY

+ INSPECTION JANUARY 28-31 (80-05): THIS ROUTINE UNANNOUNCED INSPECTION INVOLVED 26 INSPECTOR-HOURS ON SITE. THE AREAS INSPECTED WERE MEASUREMENTS OF CORE PERFORMANCE ON UNITS 1 AND 2, RESPONSE TO LERS ON BOTH UNITS, INITIAL STARTUP TESTS FOR UNIT 2 AND FOLLOWUP ON AN EARLIER UNRESOLVED ITEM. OF THE FOUR AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS. ONE APPARENT ITEM OF NONCOMPLIANCE WAS IDENTIFIED IN ONE AREA (INFRACTION - FAILURE TO PERFORM CHANNEL FUNCTIONAL TEST). ONE APPARENT DEVIATION WAS FOUND IN ONE AREA (FAILURE TO CONFORM TO A COMMITMENT FOR CORRECTIVE ACTION MADE IN AN LER).

INSPECTION FEBRUARY 19-21 (80-06): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 23 INSPECTOR-HOURS ON SITE IN THE AREAS OF SMALL BREAK LOSS OF COOLANT ACCIDENT PROCEDURES AND TRAINING. OF THE TWO AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN ONE AREA. ONE DEVIATION WAS FOUND IN ONE AREA (DEVIATION - FAILURE TO ENSURE THE STATIONS LICENSED OPERATORS HAVE COMITTED TO MEMORY THE IMMEDIATE ACTIONS OF THE FACILITY'S EMERGENCY PROCEDURES).

INSPECTION FEBRUARY 21-22 (80-08): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 5 INSPECTOR-HOURS ON SITE IN THE AREAS OF FOLLOWUP ON ITEMS OR NONCOMPLIANCE RELATIVE TO 10 CFR PART 21. THE PREVIOUSLY IDENTIFIED ITEMS OF NONCOMPLIANCE IDENTIFIED IN IE REPORTS 50-321/79-33 AND 50-366/79-37 REMAIN OPEN.

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
80-012/ 03L-0	02/14/80	02/26/80	30 DAY LER	RESIDUAL HEAT REMOVAL AND PLANT SERVICE WATER MINIMUM FLOW LINES INADEQUATELY SUPPORTED.
80-013/ 03L-0	02/03/80	02/20/80	30 DAY LER	REACTOR CORE ISOLATION COOLING CONTROLS INOPERATIVE AT REMOTE SHUTDOWN BOARD.

INSPECTION JANUARY 5 - FEBRUARY 2 (80-10): THIS INSPECTION INVOLVED 45 INSPECTOR-HOURS ON SITE OF TECHNICAL SPECIFICATION COMPLIANCE, REPORTABLE OCCURRENCES, HOUSEKEEPING, OPERATOR PERFORMANCE, OVERALL PLANT OPERATIONS, QUALITY ASSURANCE PRACTICES, STATION AND CORPORATE MANAGEMENT PRACTICES, CORRECTIVE AND PREVENTATIVE MAINTENANCE ACTIVITIES, SITE SECURITY PROCEDURES, RADIATION CONTROL ACTIVITIES, SURVEILLANCE ACTIVITIES, AND FOLLOWUP OF PREVIOUS INSPECTION FINDINGS. OF THE TWELVE AREAS INSPECTED, NO APPARENT ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

80-01/ 03L-0	02-10-80	03-11-80	30 Day LER	Setpoint drift caused fire pumps to start early during routine test.

SUMMARY

INSPECTION SUMMARY

+ Inspection on March 24-28, 1980 (Report No. 50-133/80-01)
Routine, unannounced inspection by Regional based inspectors of the licensee's response to IE Bulletin 79-19, "Packaging of Low-Level Radioactive waste for Transport and Burial;" IE Circular Nos. 79-09, 79-15, 79-21; and the licensee's laboratory counting room equipment quality control program. Areas inspected included: tours of the facility; review of regulatory requirements; burial site requirements; procedures; training; audits; inspection of packages and containers; and review of records associated with shipments of radioactive materials. In addition, the licensee submitted a sample of liquid effluent for independent analysis by the NRC and performed isotopic identification and quantification of samples supplied by the NRC. The inspection involved 38 inspector hours on site by two NRC Regional based inspectors

Results: Of the ten areas inspected, no items of noncompliance were identified in nine areas; three apparent items of noncompliance were identified in one area (Infraction - Failure to post a high radiation area, 10 CFR 20.203(c); Infraction - Failure to control access to high radiation areas, 10 CFR 20.203(c)(2)(iii); Deficiency - Failure to label a container of licensed material, 10 CFR 20.203(f).

3. SUMMARY

INSPECTION SUMMARY

None.

LICENSE STATUS

The unit produced electricity to the expiration date (October 31, 1974) of delay granted by the AEC for installation of an ECCS system. The ECCS system was not subsequently installed and the unit was defueled on January 30, 1976.

On February 11, 1980, the NRC requested the utility to show cause as to why the operating authority of the license should not be revoked and why the licensee should not submit a plan within 120 days of this order to decommission the unit.

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- The licensee experienced several condenser tube leaks which required a controlled shutdown on February 14. Condenser repairs were completed and Unit returned to service on February 20.

FACILITY ITEMS (PLANS AND PROCEDURES):

- The licensee has completed his actions to comply with the thirty day requirements of the Confirmatory Order issued February 11, 1980.

PLANT STATUS:

- Unit at 100% Power.

- LAST IE SITE INSPECTION DATE: 3/29/80
- INSPECTION REPORT NO: 50-247/80-03

SUMMARY

INSPECTION SUMMARY

- 50-247/79-22 - Oct 22-26 and Oct 29-Nov 2: A special limited physical security inspection on the implementation and compliance with the accepted physical security plan relative to the security program audit, security organization, physical barriers (PA) (VA), lighting, access control, alarm stations, detection aids, assessment aids, communications, testing and maintenance, compensatory measures, power supply, response, locks, keys and combinations, records and reports. Followup on licensee action on previously identified items of noncompliance related to physical security. The inspection involved 107 inspector-hours onsite by one NRC regional based inspector and commenced during off-shift periods. Four items of noncompliance were identified (Failure to check vital area doors on Apr 15; Failure to check all security related doors on Sept 18; Failure to post security guard on compensatory security post on Apr 15; Failure to provide semi-annual and annual retraining for four guards).

	03/19/80	F	.0	A	5		CH	VALVEX	LOAD REDUCTION CAUSED BY 22 FEEDWATER REGULATOR.
6	03/26/80	F	36.6	A	3		HJ	HTEXCH	NO. 22 S/G LOW LEVEL CONTROL AIR LINE TO HOT DUMP VALVE TO NO. 23 CONDENSER PARTED.
	03/27/80	F	.0	A	5		CH	PUMPXX	LOAD REDUCTION TO REPAIR 21 MAIN BOILER FEED PUMP.

SUMMARY

OPERATION WAS ROUTINE AT A POWER RESTRICTION TO 834 MWE (NET) DUE TO REMOVAL OF A DISC ON A LOW PRESSURE TURBINE ROTOR. LOAD REDUCTIONS OCCURRED ON 03/18/80 AND 03/19/80 TO REPAIR A MAIN FEEDWATER REGULATING VALVE, AND ON 03/27/80 TO REPAIR A MAIN BOILER FEED PUMP. ON 03/26/80, THE UNIT TRIPPED ON LOW LEVEL IN THE NO. 22 STEAM GENERATOR.

INSPECTION STATUS

ENFORCEMENT STATUS

TS 6.8.1.B, LICFNSEE FAILED TO ADHERE TO WRITTEN PROCEDURES WHICH REQUIRED THE VENTING OF SPRAY HEADER PRIOR TO START OF CONTAINMENT SPRAY PUMP.
(7923 INFRACTION)

FAILURE TO ADHERE TO ADMINISTRATIVE PROCEDURES IN REGARD TO STORAGE OF COMBUSTIBLE MATERIALS IN VITAL AREAS. (T.S. 6.8.1.A.)
(7923 DEFICIENCY)

FAILURE TO USE A DOSE RATE MONITORING DEVICE WHEN ENTERING A HIGH RADIATION AREA IN PAB (PIPE PENETRATION AREA).
(7927 INFRACTION)

ON 12/13/79, AT APPROXIMATELY 10:30 A.M., THERE WAS AN UNATTENDED CONTAINER, A 55-GALLON DRUM USED IN VACUUMING CONTAMINATED LIQUIDS, ADJACENT TO THE MAIN PASSAGEWAY OF THE 55' ELEVATION OF THE PRIMARY AUXILIARY BUILDING, WHICH CONTAINED LICENSED MATERIAL & DID NOT BEAR A LABEL IDENTIFYING THE RADIOACTIVE CONTENTS & THE WORDS "CAUTION, (OR DANGER) RADIOACTIVE MATERIAL." 10 CFR 20.203, "CAUTION SIGNS, SIGNALS & CONTROLS."
(7930 DEFICIENCY)

CONTRARY TO 10 CFR 50.59, ON 9/14/79, THE LIQUID WASTE DISPOSAL SYSTEM (A SYS DESCRIBED IN THE FSAR) WAS CHANGED, IN THAT THE FLOWPATH & LOCATION WAS CHANGED BY THE ADDITION OF A SUPPLEMENTAL WASTE HANDLING SYS, BUT A SAFETY EVALUATION PROVIDING THE DOCUMENTED BASES FOR DETERMINATION THAT THE CHANGE DID NOT INVOLVE AN UNREVIEWED SAFETY QUESTION WAS NOT PERFORMED.
(7930 INFRACTION)

ON 1/12 & 8/23/79, THE LICENSEE SHIPPED RADIOACTIVE MATERIALS, WHICH WERE GREATER THAN TYPE A QUANTITIES, IN PACKAGES THAT HAD NOT BEEN CLOSED IN ACCORDANCE WITH ADEQUATE LICENSEE PROCEDURES. 10 CFR 71.54, "ROUTINE DETERMINATIONS."
(7930 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- The licensee has experienced several trips attributed to control oil problems on MBFP and turbine lube oil contamination. Unit was removed from line on 3/7/80 and oil cleanup was completed. Unit returned to service on 3/13/80.

FACILITY ITEMS (PLANS AND PROCEDURES):

- The licensee has completed his actions to comply with the thirty day requirements of the Confirmatory Order issued February 11, 1980.

MANAGERIAL ITEMS:

- The licensee has completed his actions in regard to IAL 80-03.

PLANT STATUS:

Operation at reduced power.

- LAST IE SITE INSPECTION DATE: 3/25/80
- INSPECTION REPORT NO: 50-286/80-04

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
NONE				

SUMMARY

INSPECTION SUMMARY

- 50-286/79-23 - Sep 30-Oct 27: Routine, unannounced inspection of plant operations including: log and record reviews; tours of the facility; observation of refueling activities; observation of maintenance activities; review and observation of steam generator supports; witnessing of surveillance testing; observation of physical security; Bulletin 79-14 observations; emergency planning operation and independant inspection effort in area of containment spray actuation. The inspection involved 75 inspector-hours by the resident inspectors. Three items of noncompliance were found (Failure to control access; Failure to adhere to procedures; Failure to remove identified combustibles).

- 50-286/79-25 - Oct 23-26, Oct 29-Nov 2 and Nov 13-16 and Nov 19-21: A special physical protection inspection relative to the implementation of the Physical Security Plan; Security Program Audit; Security Organization; Physical Barriers (Protected Area) (Vital Areas); Lighting; Access Control (Identification, Authorization and Badging) (Search) (Escorting) (Vital Areas); Alarm Stations; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response;

  Locks, Keys and Combinations and Records and Reports. The inspection involved 143 inspector-hours onsite by three NRC regional based inspectors. Also reviewed was the licensee's response to IE Bulletin 79-16. Each of these areas was examined in consideration of the allegations of lax security published in local newspapers. Four items of noncompliance were identified (Failure to maintain isolation zones; Failure to operate alarm station in accordance with requirements; Failure to perform detection aid maintenance; Failure to conduct training).

SUMMARY

UNIT TRIPS OCCURRED ON 03/04/80 FROM LOSS OF THE NO. 31 MAIN BOILER FEEDWATER PUMP; ON 03/05/80 WHEN A MAIN STEAM ISOLATION VALVE WAS ACCIDENTALLY TRIPPED; ON 03/27/80 FROM STEAM FLOW/FEED FLOW MISMATCH; AND ON 03/31/80 WHEN A STATIC INVERTER FAILED AND RESULTED IN ANOTHER STEAM FLOW/FEED FLOW MISMATCH. ON 03/05/80, A TURBINE THRUST BEARING TRIP WAS ALSO EXPERIENCED DUE TO A BLOCKAGE IN THE THRUST BEARING TRIP DETECTION DEVICE, AND A LOW STEAM GENERATOR LEVEL AND REACTOR TRIP OCCURRED ON STARTUP. A WELD LEAK IN A DRAIN LINE OFF THE MAIN FEEDWATER HEADER WAS REPAIRED ON 03/17/80, AND A SHUTDOWN OCCURRED ON 03/31/80 WHEN TECHNICAL SPECIFICATION TIME FOR THE NO. 31 AUXILIARY BOILER FEEDWATER PUMP WAS EXHAUSTED.

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENTS

+ A bushing on the reserve auxiliary transformer failed on January 17, 1980 causing a plant shutdown. A fault in the main auxiliary transformer bus on January 4, 1980 had taken that transformer out of service and was out when the reserve auxiliary transformer failed. (80-02)

MANAGERIAL ITEMS

+ Effective March 1, 1980, Mr. D. C. Hintz, Nuclear Services Supervisor, Wisconsin Public Service, will become Kewaunee Nuclear Plant Superintendent. Mr. C. R. Luoma, present Plant Superintendent, is to be Assistant Manager, Nuclear Power at the Green Bay Corporate Office. (80-05)

PLANT STATUS

+ The plant operated routinely at power during the month.

+LAST IE SITE INSPECTION DATE: February 19-22, 1980

+ INSPECTION REPORT NO: 80-05

SUMMARY

INSPECTION SUMMARY

+ Inspection on January 17-22 and 25, (80-02): Special, announced inspection of a partial loss of station power and reactor trip. The inspection involved 61 inspector hours onsite by four NRC inspectors. One item of noncompliance was identified (lack of procedure for adding lubricating oil to the emergency diesel).

+ Inspection on February 4-5, (80-04): Licensee actions relative to IE Bulletins No. 79-14 and No. 79-04 including general discussion on NRC requirements, work procedure review and record review. The inspection involved 10 inspector hours onsite by one NRC inspector. No items of noncompliance or deviations were identified.

+ Inspection on February 19-22, (80-05): Routine, unannounced nuclear material control and accountability inspection of previously identified items, facility organizations and operation, measurement and controls, shipping and receiving, internal control, inventory, records and reports and management of control system. The inspection involved 42 inspector hours onsite by two NRC inspectors and was begun during the regular hours. The licensee was found to be in compliance with NRC requirements in the eight areas examined during the inspection.

NRC POWER RESTRICTIONS: NONE

*LAST IE SITE INSPECTION DATE: December 10-14, 1979

* INSPECTION REPORT NO: 79-23

INSPECTION SUMMARY

* Inspection on December 10-14, (79-23): Included a review of Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Station; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys, and Combinations; Records and Reports; Followup on Previous Item of Noncompliance; Followup on IE Bulletin No. 79-16. The insepction involved 24 inspector hours onsite by two NRC inspectors. The inspection began during the day shift; 24 inspection hours were accomplished during offshift periods. The licensee was found to be in compliance with NRC requirements within the 22 areas examined during this inspection except for the following four items: (A) Security Organization - Training was not conducted in accordance with security plan commitments; (B) Security Organization - Required security equipment was not being utilized; (C) Access Control (Identification, Authorization and Badging) - The licensee failed to properly control pictured identification badges; (D) Access Control (Search) - The licensee failed to properly control access. Two Unresolved Items were identified. These items will be referred to NRC Headquarters for evaluation and resolution. (A) The licensee relocated an assessment aid; and (B) The licensee did not follow a security plan commitment concerning the protection of one central communication system.

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
80-02	03/20/80	F	.0	B	5		HC	XXXXXX	A POWER REDUCTION FROM 85% TO 47% WAS CONDUCTED FOR PURPOSE OF REMOVING EACH OF TWO TURBINE CONDENSER WATER BOXES TO CLEAN CONDENSER TUBES AND TO REMOVE ACCUMULATED SILT FROM THE WATER BOXES. CONDENSER CLEANING WAS ACCOMPLISHED TO IMPROVE TURBINE EXHAUST VACUUM AND TEMPERATURE CONDITIONS.

SUMMARY

OPERATION WAS ROUTINE AT 85% RATED THERMAL POWER TO EXTEND CORE LIFE. LOAD WAS REDUCED ON 03/20/80 FOR CONDENSER WATERBOX CLEANING.

(8001 INFRACTION)

NO PROCEDURE FOR THE OPERATION OF THE BALING MACHINE USED TO COMPACT TRASH IN 4 FT BY 4 FT BY 8 FT BOXES HAD BEEN ESTABLISHED, REVIEWED & IMPLEMENTED ALTHOUGH THE MACHINE WAS IN USE DURING THE WEEK OF 1/14-18/80. TS 5.8.1.
(8002 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS:

- Low power physics testing and power escalation following startup from refueling on March 9.
- LAST IE SITE INSPECTION DATE: 3/21/80
- INSPECTION REPORT NO: 50-309/80-05

SUMMARY

INSPECTION SUMMARY

- 50-309/80-03 - Jan 22-25: Routine, unannounced inspection of the licensee inspection program and the implementation of the examination and testing requirements imposed by ASME Section XI. The inspection consists of program review, personnel qualification, observation of N.D.E. performed and review of test data. The inspection involved 26 inspection hours onsite by one NRC region-based inspector. No items of noncompliance were identified.
- 50-309/80-04 - Feb 18-22, 27 and Mar 4-7: Routine, unannounced inspection of refueling activities; review of plant organization and administration; followup on selected Licensee Event Reports (LER's); and participation in a meeting with representatives of the licensee and NRC's Office of Nuclear Reactor Regulation concerning implementation of Short-Term Lessons Learned resulting from Three Mile Island 2. The inspection involved 69 inspector-hours onsite by two region-based inspectors. Two items of noncompliance were identified (Infraction - No procedure detailing the responsibilities and authorities of plant staff members; and, Infraction - cleanup of Reactor Coolant System from sodium chloride injection incident without a procedure).

INSPECTION STATUS

ENFORCEMENT STATUS

NONE

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- The core spray subsystem 'A' was considered operable on March 7, following repairs to damaged subsystem pipe restraints and modification to the keep-full system in order to prevent further water hammer.

PLANT STATUS:

- The unit operated at a nominal 100% power during the month. Representative offgas and stack release rates were 135,000 and 320 microcuries per second, respectively.

- LAST IE SITE INSPECTION DATE: 3/31/80

- INSPECTION REPORT NO: 50-245/80-04

SUMMARY

INSPECTION SUMMARY

- 50-245/80-01 - Jan 1-31: Routine, onsite regular and backshift inspection by two resident inspectors (67 hours). Areas inspected included the control room and the accessible portions of the reactor, turbine, radioactive waste, gas turbine generator, and intake buildings; radiation protection; physical security; fire protection; plant operating records; surveillance testing; calibration; maintenance; core power distribution limits; and reporting to the NRC. Noncompliances: None.

- 50-245/80-03 - Feb 1-29: Routine, onsite regular and backshift inspection by two resident inspectors (122 hours). Areas inspected included the control room and the accessible portions of the reactor, turbine, radioactive waste, gas turbine generator, and intake buildings; radiation protection; physical security; fire protection; plant operating records; surveillance testing; calibration; maintenance; core power distribution limits; and reporting to the NRC. Noncompliances: None.

+LAST IE SITE INSPECTION DATE: February 4-8, 1980

+ INSPECTION REPORT NO: 80-03

SUMMARY

INSPECTION SUMMARY

+ Inspection on February 4-8, (80-03): Included a review of Security Plan; Security Program Audit; Security Organization; Protected Area Physical Barriers; Vital Area Physical Barriers; Lighting; Access Control (Identification, Authorization and Badging); Access Control (Search); Access Control (Escorting); Access Control (Vital Areas); Alarm Station; Detection Aids; Assessment Aids; Communications; Testing and Maintenance; Compensatory Measures; Power Supply; Response; Locks, Keys, and Combinations; Records and Reports; Followup on IE Bulletin No. 79-16. The inspection involved 109.5 inspector hours onsite or at the licensee's corporate office by two NRC inspectors and one inspection assistant. Of the areas inspected, one item of noncompliance was identified in the area of physical barriers (Vital Area). The inadequacy was repaired satisfactorily prior to the conclusion of this inspection, and the item is considered closed.

UNIT SHUTDOWNS/REDUCTIONS

No.	Date	Type[1]	Duration (Hours)	Reason[2]	Method of Shutting Down Reactor[3]	Licensee Event Report No.	System Code[4]	Component Code[5]	Cause & Corrective Action to Prevent Recurrence
80-09	03/01/80	S	31.2	H	1				SHUTDOWN TO INSTALL RELIEF/SAFETY VALVE POSITION INDICATORS.
80-10	03/03/80	S	160.5	H	1				UNIT RECALLED BY POWER CONTROL THEN RELEASED TO START SCHEDULED OUTAGE.
80-11	03/14/80	S	.0	H	5				LOAD REDUCTION TO 60% POWER TO PULL FLUX SHAPING RODS.

SUMMARY

OPERATION WAS ROUTINE DURING THE PERIOD WITH THE NO. 15 REACTOR RECIRCULATION PUMP OUT OF SERVICE DUE TO MECHANICAL PROBLEMS. THE UNIT WAS SHUTDOWN ON 03/01/80 TO INSTALL NRC-REQUIRED RELIEF VALVE/SAFETY VALVE POSITION INDICATORS, BUT WAS RECALLED TO SERVICE BECAUSE OF A SYSTEM GENERATION SHORTAGE. THE INDICATORS WERE INSTALLED, AND OTHER MAINTENANCE WAS COMPLETED, BETWEEN 03/03/80 AND 03/09/80. LOAD WAS REDUCED ON 03/14/80 FOR CONTROL ROD FLUX SHAPING.

INSPECTION STATUS

ENFORCEMENT STATUS

CARBON DIOXIDE FIRE PROTECTION SYSTEM FOR THE FUEL OIL PUMP HOUSE WAS NOT INSPECTED AT 6 MONTH INTERVALS DURING 1979 AS REQUIRED BY TECHNICAL SPECIFICATIONS SECTION 4.7.14.3.
(8003 INFRACTION)

A FIRE BRIGADE DRILL WAS NOT CONDUCTED FOR THE FIRE BRIGADES DURING THE LAST QUARTER OF 1979. TECHNICAL SPECIFICATIONS REQUIRE A DRILL FOR EACH BRIGADE AT LEAST ONCE EVERY 92 DAYS.
(8003 INFRACTION)

THE HOSE RACK FIRE PROTECTION SYSTEMS WERE NOT INSPECTED WITHIN 31 DAYS FOLLOWING THE MARCH 8, 1979 AND SEPTEMBER 7, 1978 INSPECTIONS AS REQUIRED BY TECHNICAL SPECIFICATIONS SECTION 4.7.14.5.
(8003 INFRACTION)

SECTION IV.E.3.B OF THE FIRE PROTECTION SYSTEMS REVIEW STATES THAT ALL FIRE PROTECTION SYSTEM CONTROL VALVES WILL EITHER BE ELECTRICALLY SUPERVISED OR SEALED IN THE CORRECT POSITION AND INSPECTED WEEKLY. A NUMBER OF THE FIRE PROTECTION CONTROL VALVES ARE INSPECTED MONTHLY IN LIEU OF THE SPECIFIED WEEKLY INSPECTIONS.
(8003 DEVIATION)

SECTION IV.B.3.C OF THE LICENSEE'S FIRE PROTECTION SYSTEMS REVIEW STATES THAT ONLY FIRE RETARDANT TREATED WOOD IS ALLOWED IN SAFETY RELATED AREAS OF THE PLANT. HOWEVER, COMBUSTIBLE WOOD SCAFFOLDING WAS NOTED IN SEVERAL SAFETY RELATED AREAS WITHIN THE PLANT.
(8003 DEVIATION)

THE PLANT'S ADMINISTRATIVE FIRE PROTECTION PROCEDURES DO NOT FULLY MEET THE NRC GUIDELINES OF THE NRC DOCUMENT "NUCLEAR PLANT FIRE PROTECTION FUNCTIONAL RESPONSIBILITIES, ADMINISTRATIVE CONTROLS AND QUALITY ASSURANCE" AS COMMITTED BY RESPONSE TO QUESTION NO. 31 IN SUPPLEMENT NO. 3 OF THE LICENSEE'S FIRE PROTECTION SYSTEM REVIEW.
(8003 DEVIATION)

CONTRARY TO THE REQUIREMENTS OF TECHNICAL SPECIFICATION 6.10.1.D, RECORDS OF SURVEILLANCE TESTS, 1-PT-11, PERFORMED TO MEET THE REQUIREMENTS OF TECHNICAL SPECIFICATION 4.1.1.1.2 WERE NOT ADEQUATE TO CONFIRM SATISFACTORY RESULTS.
(8005 DEFICIENCY)

AS REQUIRED BY CRITERION III OF APPENDIX B TO 10 CFR 50, "DESIGN CONTROL" AND SECTION 17.2.3 OF VIRGINIA ELECTRIC AND POWER COMPANY'S "TOPICAL REPORT - QUALITY ASSURANCE PROGRAM - OPERATIONS PHASE" (VEP-3-A) DESIGN CONTROL MEASURES SHALL ASSURE DELINEATION OF ACCEPTANCE CRITERIA FOR INSPECTIONS AND TESTS. INSTRUCTIONS FOR FINAL DESIGN IMPLEMENTING AND TEST PROCEDURES ON PAGE 37 OF SECTION 3 OF THE NUCLEAR POWER STATION QUALITY ASSURANCE MANUAL REQUIRE THAT ACCEPTANCE CRITERIA BE INCLUDED IN SUCH PROCEDURES. UNIT 1 DESIGN CHANGE 78-570, REPLACEMENT OF LIMIT SWITCHES ON INSIDE CONTAINMENT ISOLATION VALVES", DID NOT DELINEATE ACCEPTANCE CRITERIA FOR VALVE STROKE TIMES MEASURED AFTER PERFORMANCE OF THE DESIGN CHANGE.
(8007 INFRACTION)

TECHNICAL SPECIFICATION 6.8.1.E REQUIRES THAT WRITTEN PROCEDURES BE IMPLEMENTED WHICH COVER, IN PART, EMERGENCY PLAN IMPLEMENTATION. APPENDIX 8.5 OF THE EMERGENCY PLAN DESCRIBES EQUIPMENT TO BE MAINTAINED IN EMERGENCY HEALTH PHYSICS KITS. PROCEDURE HP-ADM-EP-1 REQUIRES AN INVENTORY OF THREE EMERGENCY HEALTH PHYSICS KITS MONTHLY (30 + 3 DAYS). CONTRARY TO THE ABOVE, THE THREE EMERGENCY HEALTH PHYSICS KITS WERE NOT INVENTORIED DURING THE MONTH OF NOVEMBER 1979, WITHIN THE PRESCRIBED TIME PERIOD.
(8009 DEFICIENCY)

TECHNICAL SPECIFICATION 6.2.2.F (ADMENDMENT 3, EFFECTIVE MAY 1, 1978) REQUIRED AT LEAST FIVE FIRE BRIGADE MEMBERS ON SITE AT ALL TIMES, IN ADDITION TO THE MINIMUM SHIFT CREW REQUIRED FOR A SAFE, ORDERLY SHUTDOWN OF THE PLANT. CONTRARY TO THE ABOVE, THE DAY SHIFT ON OCTOBER 28, 1978, CONSISTED OF ONLY FOUR FIRE BRIGADE MEMBERS. THIS WAS PREVIOUSLY IDENTIFIED AS AN UNRESOLVED ITEM AND IS APPLICABLE TO UNIT 1.
(8009 INFRACTION)

SEE CONTINUATION PAGE 0-9A

♦ LAST IE SITE INSPECTION DATE: MARCH 27, 1980

♦ INSPECTION REPORT NO: 50-338/80-13

SUMMARY

INSPECTION SUMMARY

♦ INSPECTION FEBRUARY 12-15 (80-03): THIS SPECIAL, UNANNOUNCED INSPECTION INVOLVED 25 INSPECTOR-HOURS ON SITE IN THE AREAS OF FIRE PROTECTION/PREVENTION. OF THE AREA INSPECTED, THREE ITEMS OF NONCOMPLIANCE WERE FOUND (INFRACTION - EXCESSIVE TIME BETWEEN INSPECTIONS OF CARBON DIOXIDE SYSTEM FOR FUEL OIL PUMP HOURS; INFRACTION - EXCESSIVE TIME BETWEEN INSPECTIONS OF FIRE HOSE STATIONS; AND, INFRACTION - INADEQUATE FIRE BRIGADE DRILLS FOR 1979) AND THREE DEVIATIONS WERE FOUND (INADEQUATE ADMINISTRATIVE FIRE PROTECTION PROCEDURES; COMBUSTIBLE WOOD USED IN SAFETY-RELATED AREAS; AND, SUBSTANDARD SUPERVISION OF FIRE PROTECTION CONTROL VALVES).

INSPECTION JANUARY 22-25 (80-04): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 18 INSPECTOR-HOURS ON SITE IN THE AREAS OF LICENSEE EVENT REPORTS, PREVIOUS INSPECTOR CONCERNS, AND LICENSE CONDITIONS. IT ALSO INCLUDED 5 INSPECTOR-HOURS AT VEPCO CORPORATE OFFICE IN RICHMOND, VIRGINIA IN THE AREA OF A RECENT REPORTABLE EVENT. OF THE FOUR AREAS INSPECTED, NO NEW ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 11-15 (80-05): THIS ROUTINE, UNANNOUNCED INSPECTION INVOLVED 31 INSPECTOR-HOURS ON SITE IN THE AREAS OF CORE PERFORMANCE MONITORING (UNIT 1), POST-REFUELING STARTUP TESTS (UNIT 1) AND INITIAL STARTUP TESTS (UNIT 2). OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN TWO AREAS; ONE ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (DEFICIENCY - FAILURE TO DOCUMENT SURVEILLANCE TESTS).

INSPECTION JANUARY 2-18, 24-25 AND JANUARY 31 - FEBRUARY 1 (80-07): THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED THIRTY-EIGHT (38) HOURS ON SITE IN THE AREAS OF PREVIOUSLY IDENTIFIED ENFORCEMENT ITEMS, PREVIOUSLY IDENTIFIED OPEN ITEMS, LICENSEE EVENT REPORTS, ITEMS REQUIRING RESOLUTION PRIOR TO UNIT 1 RESTART AFTER REFUELING, AND PLANT TOURS. OF THE FIVE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FOUR AREAS; ONE APPARENT ITEM OF NONCOMPLIANCE WAS FOUND IN ONE AREA (INFRACTION - FAILURE TO ESTABLISH TEST ACCEPTANCE CRITERIA).

INSPECTION FEBRUARY 19-22 (80-09): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 43 INSPECTOR-HOURS ON SITE IN THE AREAS OF COORDINATION WITH OFFSITE SUPPORT AGENCIES; EMERGENCY FACILITIES, EQUIPMENT AND PROCEDURES; EMERGENCY TRAINING; EMERGENCY PLANNING AUDITS; EMERGENCY DRILLS; FOLLOWUP ON PREVIOUSLY IDENTIFIED INSPECTION FINDINGS AND FOLLOWUP ON IE BULLETINS. A PREOPERATIONAL INSPECTION WAS PERFORMED ON FEBRUARY 20, 1980, TO DETERMINE THE STATUS OF COMPLETION OF UNIT 2'S AUXILIARY SHUTDOWN PANEL. OF THE SEVEN AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED IN FIVE AREAS; TWO ITEMS OF NONCOMPLIANCE WERE FOUND IN TWO AREAS (DEFICIENCY - FAILURE TO INVENTORY EMERGENCY KITS; INFRACTION - FAILURE TO MAINTAIN THE MINIMUM NUMBER OF FIRE BRIGADE MEMBERS ON EACH SHIFT).

INSPECTION FEBRUARY 19-22 (80-10): THIS SPECIAL, ANNOUNCED INSPECTION INVOLVED 56 INSPECTOR-HOURS ON SITE IN THE AREAS OF SMALL BREAK LOSS OF COOLANT PROCEDURES AND TRAINING, AND THE REACTOR TRIP OF FEBRUARY 20. OF THE THREE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 4-19 AND 25-29 (80-11): THIS ROUTINE INSPECTION BY THE RESIDENT INSPECTOR INVOLVED 12 HOURS ON SITE IN THE AREAS OF PREVIOUSLY IDENTIFIED OPEN ITEMS AND REPORTABLE PLANT EVENTS. WITHIN THE TWO AREAS INSPECTED, ONE APPARENT ITEM OF NONCOMPLIANCE WAS IDENTIFIED (INFRACTION - FAILURE TO PERFORM A SAFETY EVALUATION ON A PROPOSED TEST AS REQUIRED BY TECHNICAL SPECIFICATIONS).

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 71.5, ON DECEMBER 18, 1979, A RADIOACTIVE WASTE SHIPMENT (CASK) FROM YOUR OCONEE PLANT, UPON ARRIVAL AT CHEM-NUCLEAR'S WASTE DISPOSAL SITE AT BARNWELL, SOUTH CAROLINA WAS FOUND TO BE MARKED WITH "EMPTY" LABELS IN ADDITION TO "RADIOACTIVE LSA" LABELS. 49 CFR 172.502(A)(2) SPECIFIES THAT NO PERSON MAY AFFIX OR DISPLAY ON A MOTOR VEHICLE ANY PLACARD UNLESS THE PLACARD REPRESENTS A HAZARD OF THE HAZARDOUS MATERIAL BEING TRANSPORTED.
(7945 DEFICIENCY)

CONTRARY TO 10 CFR 71.5, ON FEBRUARY 6, 1980, A SHIPMENT OF 150 DRUMS OF RADIOACTIVE WASTE FROM YOUR OCONEE PLANT ARRIVED AT CHEM-NUCLEAR WASTE DISPOSAL SITE IN BARNWELL, SC NOT PROPERLY MARKED "RADIOACTIVE - LSA" AS REQUIRED BY 49 CFR 173.392(C)8.
(8011)

CONTRARY TO 10 CFR 71.5, ON FEBRUARY 6, 1980, A SHIPMENT OF 150 DRUMS CONTAINING RADIOACTIVE WASTE FROM YOUR OCONEE PLANT ARRIVED AT CHEM-NUCLEAR WASTE DISPOSAL SITE IN BARNWELL, SC NOT BRACED TO PREVENT SHIFTING OF LADING (DRUMS) AS REQUIRED BY 49 CFR 173.392(C)6.
(8011 DEFICIENCY)

SUMMARY

INSPECTION SUMMARY

- INSPECTION JANUARY 14-17 AND 22-24, (80-03): THIS ROUTINE UNANNOUNCED INSPECTION INVOLVED 21 INSPECTOR-HOURS ON SITE IN THE AREAS OF IE BULLETINS 79-13 AND 79-17, UNITS 1, 2 AND 3; AUXILIARY FEEDWATER NOZZLE THERMAL SLEEVE INSPECTION AND CRACK REPAIR, CRD STATOR MOTOR DROP DURING MAINTENANCE, RPV FLANGE O-RING REPAIR. OF THE AREAS INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION JANUARY 23-30 (80-06): THIS ROUTINE, ANNOUNCED INSPECTION INVOLVED 196 INSPECTOR-HOURS ON SITE IN THE AREA OF CONTAINMENT INTEGRATED LEAK RATE TESTING WHICH INCLUDED INSPECTION OF TEST PROCEDURES, INSTRUMENT CALIBRATIONS, DATA PROCESSING, VALVE ALIGNMENT AND PROBLEMS ENCOUNTERED DURING THE TEST. OF THE AREA INSPECTED, NO ITEMS OF NONCOMPLIANCE OR DEVIATIONS WERE IDENTIFIED.

INSPECTION FEBRUARY 25-29 (80-08): INCLUDED REVIEW OF THE LICENSEE'S SECURITY PLAN, SECURITY PROGRAM AUDIT, SECURITY ORGANIZATION, VITAL AND PROTECTED AREA PHYSICAL BARRIERS, LIGHTING, ACCESS CONTROLS, ALARM STATION, DETECTION AND ASSESSMENT AIDS, COMMUNICATIONS, TESTING AND MAINTENANCE, COMPENSATORY MEASURES, RESPONSE, KEYS/LOCKS, AND RECORDS/REPORTS. THE INSPECTION INVOLVED 26 INSPECTOR-HOURS ON SITE BY TWO NRC INSPECTORS. THE INSPECTION WAS BEGUN DURING AN OFFSHIFT PERIOD; 6 INSPECTION HOURS WERE ACCOMPLISHED DURING OFFSHIFT PERIOD. THE LICENSEE WAS FOUND TO BE IN COMPLIANCE WITH NRC REQUIREMENTS WITHIN THE AREAS EXAMINED DURING THE INSPECTION. THE CORRECTIVE ACTION FOR A PREVIOUSLY IDENTIFIED ITEM OF NONCOMPLIANCE (79-24-01) PERTAINING TO A VITAL AREA PHYSICAL BARRIER WAS NOT COMPLETED AND REMAINS OPEN.

NRC POWER RESTRICTIONS: NONE

INSPECTION STATUS

ENFORCEMENT STATUS

CONTRARY TO 10 CFR 20.201(B), THE LICENSEE FAILED TO MAKE SURVEYS OF THE EFFLUENTS RELEASED FROM THE NEW RAD WASTE BUILDING.
(7918 INFRACTION)

CONTRARY TO 10 CFR 50.54(P), THE LICENSEE DID NOT NOTIFY THE DIRECTOR OF NUCLEAR REACTOR REGULATION OR THE APPROPRIATE REGIONAL OFFICE OF A CHANGE TO THE SECURITY PLAN, WHICH DID NOT DECREASE THE SAFEGUARDS EFFECTIVENESS OF THE PLAN, WITHIN THE REQUIRED 2 MONTHS AFTER THE CHANGE WAS MADE.
(7918 DEFICIENCY)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION V & THE OQA PLAN, THE LICENSEE FAILED TO FOLLOW PROCEDURES IN THAT 3 FIRE DOORS WERE FOUND BLOCKED OPEN & WOOD UNCERTIFIED AS "FIRE RETARDANT" WAS FOUND IN THE FUEL STORAGE AREA.
(7918 INFRACTION)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION V & THE OQA PLAN, THE LICENSEE FAILED TO REINSPECT & STORE WELD RODS AS REQUIRED BY PROCEDURE 3005.
(7918 DEFICIENCY)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION V & THE OQA PLAN, SECTION X, THE LICENSEE FAILED TO FOLLOW PROCEDURE 2002 IN THAT NONCONFORMANCE/CORRECTIVE ACTION REPORTS WERE NOT RESPONDED TO WITHIN 10 DAYS & CLOSEOUT WAS NOT TIMELY.
(7918 INFRACTION)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION V & THE OQA PLAN, SECTION X, THE LICENSEE FAILED TO IMPLEMENT A TRAINING PROGRAM AS SPECIFIED IN PROCEDURES 5002, 6002, 7002 & THE ADMINISTRATIVE TRAINING MANUAL, SECTION IV & A FORMAL TRAINING PROGRAM FOR HP TECHNICIANS WAS NOT ESTABLISHED.
(7918 INFRACTION)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION V & THE OQA PLAN, SECTION X, INADEQUATE INSTALLATION INSTRUCTIONS EXISTED IN THAT INSTALLATION OF ANCHOR BOLTS & REPAIRS OF ABANDONED DRILL HOLES WERE NOT ACCOMPLISHED AS REQUIRED BY PROCEDURE 6009 & A JOB ORDER HAD NOT BEEN COMPLETED AS REQUIRED.
(7918 INFRACTION)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION V & THE OQA PLAN, THE LICENSEE FAILED TO FOLLOW PROCEDURE 105 IN THAT OPERATING PROCEDURES & "AS-BUILT" DRAWINGS WERE NOT UPDATED AFTER COMPLETION OF A MODIFICATION. ALSO WORK WAS PERFORMED ON Q-EQUIPMENT W/O WRITTEN PROCEDURES.
(7918 INFRACTION)

CONTRARY TO 10 CFR 50, APPENDIX B, CRITERION V & THE OQA PLAN, SECTION X, INSTALLATION DRAWINGS LACKED DETAILS REGARDING PIPE SUPPORTS & LACKED THE USE OF "SECOND NUT" REQUIREMENTS FOR PIPE SUPPORT U CLAMPS.
(7918 INFRACTION)

CONTRARY TO TS 4.5.K.1.A(2), A SAMPLE FROM THE STANDBY GAS TREATMENT SYSTEM CHARCOAL ABSORBERS WAS NOT TAKEN OR ANALYZED AS OF 11/2/79. THIS SURVEILLANCE IS REQUIRED EVERY 18 MONTHS.
(7918 INFRACTION)

CONTRARY TO TS 6.5.3.5.B, THE TRAINING & QUALIFICATIONS OF THE ENTIRE FACILITY STAFF WAS NOT AUDITED AT LEAST ONCE A YEAR.
(7918 INFRACTION)

CONTRARY TO TS 6.10.3, THE LICENSEE FAILED TO MAINTAIN A DUPLICATE FILE SYSTEM AT THE SITE & CORPORATE OFFICE.
(7918 INFRACTION)

CONTRARY TO TS 6.8.1, CONTROL OF EQUIPMENT PROCEDURE 108 DID NOT PROVIDE FOR INDEPENDENT VERIFICATION FOR PLACING/REMOVING TAGS, JUMPERS & LIFTED LEADS.
(7918 INFRACTION)

CONTRARY TO TS 6.8.1, WRITTEN PROCEDURES HAD NOT BEEN ESTABLISHED IN ORDER TO CALIBRATE VARIOUS RADIATION EFFLUENT & GASEOUS MONITORS.
(7918 INFRACTION)

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
80-004/ 03L	01/25/80	02/25/80	30 Day LER	Several leaks discovered in underground aluminum condensate lines. Leakage was due to galvanic corrosion
80-005/ 03L	02/05/80	02/28/80	30 Day LER	Reactor building ventilation monitor trip setpoints found high er than T.S. limits
80-006/ 03L	01/31/80	02/29/80	30 Day LER	Recirculation flow sensors at zero percent found out of tolerance on 6 of 8 channesl. Reactor scram for 3 of 8 above specified value due to flow snesor error
80-007/ 03L	02/13/80	03/06/80	30 Day LER	Low flow on SBGTS No. 1 due to slipping belts on exhaust fan. Belst replaced and system tested satisfactorily.
80-008/ 01T	02/15/80	02/29/80	24 Hours	Nine pipe clamps which connect snubbers to isolation condenser piping were found not installed per design. Identified under IEB 79-14.
80-009/ 03L	02/19/80	03/19/80	30 Day LER	Tube leakage on all containment spray heat exchangers. Tubes being replaced during refueling outage
80-010/ 01T	02/20/80	03/06/80	24 Hours	During as built verification 3 pipe hangers in the liquid poison system were identified as not installed per design. One add restraint in RWCU system also ident as incor installed.
80-011/ 03L	02/19/80	03/17/80	30 Day LER	Trip of SBGTS No. 1 when flow indicated zero because of a leaking instrument sensing line
80-013/ 01T	03/09/80	03/24/80	24 Hours	Fire system taken out of service to repair a leaking valve in the supply header
80-014/ 01T	03/02/80	03/24/80	24 Hours	Diesel Generator No. 1 failed to synchronize and tripped while undergoing surveillance testing during cold shutdown conditions

INSPECTION STATUS

OTHER ITEMS OF INTEREST

SYSTEMS AND COMPONENT PROBLEMS:

- A total of 28 cracks and/or crack indications were identified in the Core Spray System I and II spargers during inspection and evaluation of previously identified and reported cracks. An NRC/Licensee meeting was held on April 1, 1980 to discuss planned repairs.

PLANT STATUS:

- The plant is shutdown for refueling with return to operation scheduled for May 22, 1980.

- LAST IE SITE INSPECTION DATE: 3/28/80
- INSPECTION REPORT NO: 50-219/80-12

SUMMARY

INSPECTION SUMMARY

- 50-219/80-07 - Feb 12-15, 19-20 and 26-29: Routine, onsite, unannounced inspection by two region-based inspectors (98 hours) of 5 inspection areas: Licensee action on previous inspection findings; IE Bulletin and Circular followup; onsite licensee event followup; fire protection modification; and, independent inspection effort. Plant tours were also conducted. Noncompliances: None.

INSPECTION STATUS

ENFORCEMENT STATUS

TECHNICAL SPECIFICATION 3.6.1 STATES THAT CONTAINMENT INTEGRITY SHALL NOT BE VIOLATED UNLESS THE REACTOR IS IN THE COLD SHUTDOWN CONDITION. CONTRARY TO THE ABOVE, THE LICENSEE ON NUMEROUS AND LENGTHY OCCASIONS FROM APRIL, 1978, TO SEPTEMBER, 1979, OPERATED THE REACTOR IN OTHER MODES, INCLUDING FULL-POWER OPERATIONS, WITH CONTAINMENT INTEGRITY VIOLATED BY THE LOCKED-OPEN CONDITION OF BOTH SERIES MANUAL ISOLATION VALVES IN THE CONTAINMENT PURGE EXHAUST BYPASS LINE.
(7915 VIOLATION)

TECHNICAL SPECIFICATION 3.6.3 REQUIRES THAT PRIOR TO GOING CRITICAL AFTER A REFUELING OUTAGE, AN ADMINISTRATIVE CHECK WILL BE MADE TO CONFIRM THAT ALL MANUAL CONTAINMENT ISOLATION VALVES ARE CLOSED AND LOCKED. CONTRARY TO THE ABOVE, DUE TO A DEFICIENT CONTAINMENT INTEGRITY VERIFICATION PROCEDURE, THE PLANT HAS BEEN TAKEN CRITICAL AFTER EACH OF ITS REFUELING OUTAGES WITHOUT CONFIRMATION THAT TWO MANUAL CONTAINMENT ISOLATION VALVES FOR THE CONTAINMENT PURGE EXHAUST BYPASS WERE CLOSED AND LOCKED AS REQUIRED.
(7915 INFRACTION)

TECHNICAL SPECIFICATION 6.8.1.C REQUIRES IMPLEMENTATION OF PROCEDURES FOR SURVEILLANCE AND TESTING OF SAFETY-RELATED EQUIPMENT. HEALTH PHYSICS PROCEDURE H.P.6.27 GOVERNS TESTING OF IN-PLACE HEPA AND CHARCOAL FILTERS IN SAFETY-RELATED SYSTEMS PURSUANT TO TECHNICAL SPECIFICATION TABLE 4.2.2, AND REQUIRES NOTIFICATION AND SIGN OFF BY THE SHIFT SUPERVISOR AND THE PLANT HEALTH PHYSICIST ON COMPLETION OF TESTING. CONTRARY TO THE ABOVE, THE REQUIRED NOTIFICATION AND SIGN OFFS WERE NOT COMPLETED AFTER THE LICENSEE TESTED FILTERS IN THE CONTAINMENT VENTILATION EXHAUST BYPASS LINE UNDER H.P.6.27 ON APRIL 4-7, 1978.
(7915 INFRACTION)

FAILURE OF LICENSEE TO COMPLY WITH 10 CFR 70.54 AND REFERENCED INSTRUCTION FOR COMPLETION AND DISTRIBUTION OF FORMS NRC-741.
(8001 DEFICIENCY)

10 CFR 50, APPENDIX J, SECTION IV.A REQUIRES, IN PART "...REPLACEMENT OF A COMPONENT WHICH IS PART OF THE PRIMARY REACTOR CONTAINMENT BOUNDARY,...SHALL BE FOLLOWED BY A TYPE A, TYPE B, OR TYPE C TEST, AS APPLICABLE..." CONTRARY TO THE ABOVE, THE LICNSEE PERIODICALLY REMOVES A PIPE CAP ON THE CONTAINMENT PRESSURE INSTRUMENT LINES TO TEST AND CALIBRATE THE PRESSURE TRANSMITTERS AND SWITCHES. ALTHOUGH THE PIPE CAP IS PART OF THE PRIMARY CONTAINMENT BOUNDARY, NO LEAK TEST WAS PERFORMED AFTER REPLACEMENT OF THE CAP FOLLOWING INSTRUMENT TESTING ON JUNE 5 AND ON JULY 2, 1979. THE REACTOR WAS OPERATED AT POWER AFTER BOTH TESTS.
(8002 INFRACTION)

INSPECTION STATUS

OTHER ITEMS OF INTEREST

PLANT STATUS

- Reactor shutdown on September 10, 1979, to begin a 18-week scheduled refueling and maintenance outage. Start-up tentatively scheduled for late April 1980.

•LAST IE SITE INSPECTION DATE: December 1979 and January 1980

- INSPECTION REPORT NO: 80-02

SUMMARY

INSPECTION SUMMARY

- Inspection on January 23-25, (80-01): Licensee Action on Previous Inspection Findings, Facility Organization and Operation, Measurements and Control, Shipping and Receiving, Storage and Internal Control, Inventory, Records and Reports and Management of Nuclear Material Control Systems. The inspection involved 42 inspector hours onsite by two NRC inspectors and was begun during the regular hours. The licensee was found to be in compliance with NRC requirements in the eight areas examined during the inspection except for the following one item: Failure of licensee to comply with 10 CFR 70.54 and referenced instruction for completion and distribution of Forms NRC-741.

NRC POWER RESTRICTIONS: NONE

REPORTS RECEIVED FROM LICENSEE

NUMBER	DATE OF EVENT	DATE OF REPORT	TYPE OF REPORT	SUBJECT
79-32/ 03L-0	07/25/79	08/14/79	30 Day LER	High secondary system conductivity and sodium.

- Inspection during December 1979 and January 1980, (80-02): Routine, resident inspection program activities including operations, reportable occurrences, action on IE Bulletins and followup to previously identified items. Special inspection of licensee activities pursuant to NRC Order Modifying License DPR-20 dated November 9, 1979. The inspection involved 379 inspector hours onsite by three NRC inspectors. A meeting was held with local officials on January 14, 1980, to brief them on the NRC Resident Inspector Program and to introduce to them the Resident Inspector assigned at the Palisades Plant. Of the four areas examined, no items of noncompliance were identified in three areas. One item of noncompliance (failure to leak-test on restoration of primary containment boundary) was identified in the remaining area of inspection.
